ENUMERATE EXERCISE SHEETS

v1.6 2025-06-21^{*}

©2024–2025 by Pablo González L[†]

CTAN: <https://www.ctan.org/pkg/enumext>

 <https://github.com/pablgonz/enumext>

Abstract

This package provides enumerated list environments compatible with *tagging* PDF for creating “*simple exercise sheets*” along with “*multiple choice questions*”, storing the “*answers*” to these in memory using *multicol* package.

Contents

1	Introduction	1	6	The storage system	11
1.1	Description and usage	2	6.1	Keys for storage system	12
1.2	The concept of left margin	3	6.1.1	Keys for label and ref	12
1.3	User interface	3	6.1.2	Keys for wrap and marks	12
1.3.1	Internal counters	3	6.1.3	Keys for debug and checking	14
1.3.2	Public dimension	3	6.2	The command <code>\anskey</code>	14
1.3.3	Support for multicol	4	6.2.1	Keys for <code>\anskey</code>	14
1.3.4	Support for minipage	4	6.3	The environment <code>anskey*</code>	15
1.3.5	The <code>\label</code> and <code>\ref</code> system	4	6.3.1	Keys for <code>anskey*</code>	15
1.3.6	Support for <code>\footnote</code>	4	6.4	The environment <code>keyans</code>	16

3	The command <code>\setenumext</code>	6	6.6.2	The command <code>\foreachkeyans</code>	19
4	The command <code>\setenumextmeta</code>	6	6.6.3	The command <code>\printkeyans</code>	19
5	The keyval system	7	7	Full examples	21
5.1	Keys for label and ref	7	8	Tagged PDF examples	23
5.2	Keys for penalties	8	9	The way of non-enumerated lists	24
5.3	Keys for spaces	8	10	References	26
5.3.1	Vertical spaces	8	11	Change history	27
5.3.2	Horizontal spaces	9	12	Index of Documentation	28
5.4	Keys for add code	10	13	Implementation	30
5.5	Keys for start, series and resume	10	14	Index of Implementation	150
5.6	Keys for multicols	11			
5.7	Keys for minipage	11			
5.7.1	The command <code>\miniright</code>	11			
5.7.2	The key <code>mini-right</code>	11			

Motivation and acknowledgments

Usually it is enough to use the classic `enumerate` environment to generate “*simple exercise sheets*” or “*multiple choice questions*”, the basic idea behind `enumext` is to cover three points:

1. To have a simple interface to be able to write “*lists of exercises*” with “*answers*”.
2. To have a simple interface for writing “*multiple choice questions*”.
3. To have a simple interface for placing “*columns*” and “*drawings*” or “*tables*”.

This package would not be possible without Phelype Oleinik who has collaborated and adapted a large part of the code and all L^AT_EX team for their great work and to the different members of the TeX-SX community who have provided great answers and ideas. Here a note of the main ones:

1. Answer given by Alan Munn in `\topsep`, `\itemsep`, `\partopsep`, `\parsep` - what do they each mean (and what about the bottom)?
2. Answer given by Enrico Gregorio in [Understanding minipages - aligning at top](#)
3. Answer given by Ulrich Diez in [Different mechanics of hyperlink vs. hyperref](#)
4. Answer given by Enrico Gregorio in [Minipage and multicols, vertical alignment](#)

^{*}This file describes a documentation for v1.6, last revised 2025-06-21.

License and Requirements

Permission is granted to copy, distribute and/or modify this software under the terms of the LaTeX Project Public License (lpl), version 1.3 or later (<https://www.latex-project.org/lpl.txt>). The software has the status “maintained”.
The enumext package loads and requires multicol[3] package, need to have a modern T_EX distribution such as T_EX Live or MiK_TTeX. It has been tested with the standard classes provided by L^AT_EX: book, report, article and letter on 10pt, 11pt and 12pt.

The minimum requirement is L^AT_EX release 2025-06-01.

1 Introduction

In the L^AT_EX world there are many useful packages and classes for creating “lists of exercises”, “worksheets” or “multiple choice questions”, classes like exam[1] and packages like xsim[2] do the job perfectly, but they don’t always fit the basic day to day needs.

In my work (and in the work of many teachers) it is common to use “simple exercise sheets” also known as “informal lists of exercises”, as an example:

1. Factor $x^2 - 2x + 1$

2. Factor $3x + 3y + 3z$

3. True False

(a) $\alpha > \delta$

(b) L^AT_EXze is cool?

4. Related to Linux
- (a) You use linux?

(b) Usually uses the package manager?

(c) Rate the following package and class

i. xsim-exam

ii. xsim

iii. exsheets

Sometimes we are also interested in showing the “answers” along with the questions:

1. Factor $x^2 - 2x + 1$

*

$(x - 1)^2$

2. Factor $3x + 3y + 3z$

*

$3(x + y + z)$

3. True False

(a) $\alpha > \delta$

*

False

(b) L^AT_EXze is cool?

*

Very True!

4. Related to Linux
- (a) You use linux?

*

Yes

(b) Usually uses the package manager?

*

Yes, dnf

(c) Rate the following package and class

i. xsim-exam

*

doesn’t exist for now :(

ii. xsim

*

very good

iii. exsheets

*

obsolete
- Or we are interested in referring to a specific question and its “answer”, for example:
- The answer to 3.(b) is “Very True!” and the answer to 4.(c).ii is “very good”.
- Or we are interested in printing all the “answers”:
1. $(x - 1)^2$

2. $3(x + y + z)$

3. (a) False

(b) Very True!

4. (a) Yes

(b) Yes, dnf

(c) i. doesn’t exist for now :(

ii. very good

iii. obsolete
- Another very common thing to use in my work is “multiple choice questions”, for example:
1. First type of questions

A) value

B) correct

C) value

D) value

2. Second type of questions

I. $2\alpha + 2\delta = 90^\circ$

II. $\alpha = \delta$

III. $\angle EDF = 45^\circ$

A) I only

B) II only

C) I and II only

D) I and III only

E) I, II, and III

★ 3. Third type of questions

(1) $2\alpha + 2\delta = 90^\circ$

(2) $\angle EDF = 45^\circ$

A) value

B) value

C) value

D) value

E) value

4. Question with image and label below:

A

A)

B

B)

A

C)

A

D)

E)

5. Question with image on right side:

A) value

B) value

C) value

D) correct

E) value

2 / 166

Where what we are interested in the $\langle label \rangle$ and a “short note” that we leave as an explanation, and then print them:

1. B) $x = 5$

2. D)

3. C) some note
- ⌘ 4. E) A duck

⌘ 5. D) “other note”

⌘

The `enumext` package was created and designed to meet these small requirements in the creation of “simple worksheets” and “multiple choice questions”.

- These “simple worksheets” or “multiple choice questions” appear to be easy to obtain using a combination of the `enumerate`, `minipage` and `multicols` environments, but like many things, what “looks simple” is not so simple.

1.1 Description and usage

The `enumext` package defines enumerated environments using the `list` environment provided by \TeX , but “does not redefine” any internal commands associated with it such as `\list`, `\endlist` or `\item` outside of the “scope” in which they are defined.

- This package is NOT intend to replace the `enumerate` environment nor replace the powerful `enumitem`[6], the approach is intended to work without hindering either of them.

This package can be used with `xelatex`, `lualatex`, `pdflatex` and the classical `latex`»`dvips`»`ps2pdf` and is present in \TeX Live and $\text{MiK}\text{\TeX}$, use the package manager to install. For manual installation, download `enumext.zip` and unzip it, run `luatex enumext.ins` and move all files to appropriate locations, then run `mktexlsr`. To produce the documentation run `arara enumext.dtx`.

<code>enumext.sty</code>	»	<code>TDS:tex/latex/enumext/</code>
<code>enumext.pdf</code>	»	<code>TDS:doc/latex/enumext/</code>
<code>README.md</code>	»	<code>TDS:doc/latex/enumext/</code>
<code>enumext.dtx</code>	»	<code>TDS:source/latex/enumext/</code>
<code>enumext.ins</code>	»	<code>TDS:source/latex/enumext/</code>

The package is loaded in the usual way:

```
\usepackage{enumext}
```

1.2 The concept of left margin

There is a direct relationship between the parameters `\leftmargin`, `\itemindent`, `\labelwidth` and `\labelsep` plus an “extra space” that makes it difficult to obtain the desired *horizontal spaces* in a `list` environment. Usually we don’t want the `list` to go beyond the left margin of the page, but since these four values are related, that causes a problem.

The `enumitem`[6] package adds the `\labelindent` parameter to solve some of these problems. A simplified representation of this in the figure 1.

Figure 1: Representation of horizontal lengths in `enumitem`.

The `enumext` package does NOT provide a user interface to set the values for `\leftmargin` and `\itemindent`, instead it provides the keys `list-offset` and `list-indent` which internally set the values for `\leftmargin` and `\itemindent`. The concepts of `\leftmargin` and `\itemindent` are different in `enumext`. The figure 2 shows the visual representation of idea.

Figure 2: Representation of horizontal lengths concept in `enumext`.

In this way we reduce a *little* the amount of parameters we have to pass. With the default values of keys `list-offset`, `list-indent`, `labelwidth` and `labelsep` the lists will have the (usually) expected output for “simple worksheets”. The figure 3 shows the visual representation.

Figure 3: Default horizontal lengths `list-offset=0pt`, `list-indent=\labelwidth+\labelsep` in `enumext`.

1.3 User interface

The user interface consists of two main list environments `enumext` (vertical) and `enumext*` (horizontal), the environment `anskey*` and the command `\anskey` to “store content” and the environments `keyans`, `keyans*` and `keyanspic` for multiple choice. It also provides the commands `\getkeyans` to print individual *stored content*, `\printkeyans` and `\foreachkeyans` to print all *stored content*, `\miniright` for `minipage`, `\setenumext` and `\setenumextmeta` to config [*key* = *val*] options.

1.3.1 Internal counters

The package `enumext` uses internally the `enumXi`, `enumXii`, `enumXiii`, `enumXiv` counters for the four nesting levels of the `enumext` environment, the `enumXv` counter for the `keyans` environment, the `enumXvi` counter for the `keyanspic` environment, the counter `enumXvii` for `enumext*` environment and the counter `enumXviii` for `keyans*` environment.

- If any package defines these counters or they are user-defined in the document, the package will return a fatal error and abort the load.

1.3.2 Public dimension

The package `enumext` only provides a single public dimension `\itemwidth` and is intended for user convenience only and is not for internal use as such. The dimension `\itemwidth` is *rigid length* and contains the “width of the content” of each `\item` regardless of `labelwidth` and `labelsep`.

- If any package defines `\itemwidth` or they are user-defined `\itemwidth` in the document, the package will overwrite it without warning.

1.3.3 Support for multicol

The package provides direct support for using the `multicol`[3] package. This allows to obtain directly a two-column output as shown in the figure 4.

Figure 4: Representation of the two column output for a nested level in `enumext` environment.

The “non starred” version of the `multicols` environment is always used together with the `\raggedcolumns` command and is controlled by `columns` and `columns-sep` keys. It can be used in all nesting levels of the environment `enumext` and the environment `keyans` and can together with the `mini-env` key. If you need to force a start a new column `\columnbreak` must be used (see §5.6).

- The `\columnseprule` command is not available as a key and is set to “zero” for the inner levels and the `keyans` environment. If the value of this is set inside the document, it will affect “all environments” that use the `columns` key.

1.3.4 Support for minipage

The package provides direct support for `minipage` environment, this allows you to obtain an output like the one shown in figure 5.

Figure 5: Representation of the `mini-env` output for a nested level `enumext` environment.

The `minipage` environments on “left side” and “right side” is always used with “aligned on top” [*t*]. It can be used in all nesting levels of the environment `enumext` and the environment `keyans` and is controlled by `mini-env` and `mini-sep` keys. In order to switch from the “left” side `minipage` environment to the “right” side one must use the command `\miniright` (see §5.7).

1.3.5 The \label and \ref system

This package provides a user interface like the `enumitem`[6] package to customize the references which is activated by the `ref` key (§5.1), the standard \TeX `\label` and `\ref` commands work as usual. It also provides an “internal reference” system for the “stored content” by means of the key `save-ref` (§6.1.1) when the key `save-ans` (§6.1) is active.

1.3.6 Support for \footnote

The `enumext*` and `keyans*` environments and the `mini-env` key use the `minipage` environment in their implementation but in a transparent way for the user, i.e. it is only used for typesetting and not directly. The `enumext` package provides an *internal implementation* for the command `\footnote` compatible with the `hyperref` package to work in the same way as if it were used anywhere in the document.

Unfortunately, if *tagging* PDF is not enabled, it will not produce the expected “links” because the internal implementation uses `\footnotetext[⟨number⟩]` and `\footnotemark[⟨number⟩]{⟨text⟩}` and support for these is limited by the `hyperref` package.

The best way to solve this if *tagged* PDF is NOT active is to use Jean-François Burnol `footnotehyper`[9] package, it will support keeping the “links” if `hyperref` is loaded with the `hyperfootnotes=true` option (default). Load it is as follows:

```
\IfDocumentMetadataF
{
  \usepackage{footnotehyper}
  \makesavenoteenv{enumext}
  \makesavenoteenv{enumext*}
}
```

At the moment the `footnotehyper` package is not compatible with *tagged* PDF.

2 The environments provided

The package `enumext` provides two main list environments, the *vertical* environment `enumext` and the *horizontal* environment `enumext*`.

enumext	<code>\begin{enumext}[⟨keyval list⟩]</code>	<code>\begin{enumext*}[⟨keyval list⟩]</code>
enumext*	<code>\item ⟨item content⟩</code>	<code>\item ⟨item content⟩</code>
	<code>\item [⟨custom⟩] ⟨item content⟩</code>	<code>\item [⟨custom⟩] ⟨item content⟩</code>
	<code>\item* [⟨symbol⟩] [⟨offset⟩] ⟨item content⟩</code>	<code>\item* [⟨symbol⟩] [⟨offset⟩] ⟨item content⟩</code>
	<code>\end{enumext}</code>	<code>\end{enumext*}</code>

2.1 The environment enumext

The `enumext` is an environment that works in the same way as the standard `enumerate` environment provided by \LaTeX , `\item` and `\item[⟨custom⟩]` commands work in the usual way. The environment can be nested with at most “four levels” and the options can be configured globally using `\setenumext` command and locally using `[⟨key = val⟩]` in the environment.

Example with `columns=2`

1. This text is in the first level.
- A. This text is in the fourth level.
- (a) This text is in the second level.
- X This text is in the first level.
- i. This text is in the third level.
- ★ 2. This text is in the first level.

2.2 The environment enumext*

The `enumext*` is a *horizontal list environment* similar to the `shortenumberate` or `tasks` environments provided by the `shortlst`[16] and `tasks`[17] packages, `\item` and `\item[⟨custom⟩]` work as usual. The options can be configured globally using `\setenumext` command and locally using `[⟨key = val⟩]` in the environment.

Some considerations to take into account for this environment:

- The environment cannot be nested within itself or in the environment `keyans*`, but it can be nested within `enumext` and vice versa.
- Each “item content” in the environment is placed within a `minipage` environment whose *width* is stored in the dimension `\itemwidth` that NOT includes `labelwidth`, `labelsep`, only the *width of the content*.
- You cannot have floating environments like `figure` or `table` but `\footnote` with `hyperref` support is supported if the `footnotehyper` package is loaded (see §1.3.6 for full support).
- You cannot have any standard list environments like `itemize`, `enumerate`, `description`, `quote`, `quotation`, `verse`, `center`, `flushleft`, `flushright`, `verbatim`, `tabbing`, `trivlist`, `list` and all environments created with `\newtheorem`.

Example with `columns=2`

1. This text is in the first level.
2. This text is in the first level.
- X This text is in the first level.
- ★ 4. This text is in the first level.

2.3 The command \item*

```
\item* \item* [⟨symbol⟩] [⟨offset⟩]
```

The `\item*`, `\item* [⟨symbol⟩]` and `\item* [⟨symbol⟩] [⟨offset⟩]` works like the numbered `\item`, but placing a `⟨symbol⟩` to the “left” of the `⟨label⟩` separated from it by the `⟨offset⟩` set by the the *second optional argument*. The *starred argument* “*” cannot be separated by spaces ‘`␣`’ from the command, i.e. `\item*` and the *first optional argument* does “NOT” support *verbatim content*. Can be configure with the keys `item-sym*` and `item-pos*` locally in the environment or globally using `\setenumext` command (§3).

The behavior of `\item*` in the `enumext` and `enumext*` environments is NOT the same as in the `keyans` and `keyans*` environments.

2.3.1 Keys for \item*

`item-sym*` = {<symbol>} default: \textborn
Sets the *symbol* to be displayed in the “left” of the box containing the current <label> set by `labelwidth` key for `\item*` in `enumext` and `enumext*`. The *symbol* can be in *text* or *math* mode, for example `item-sym*={\star}`.
`item-pos*` = {<rigid length>} default: by levels
Sets the *offset* between the box containing the current <label> defined by `labelwidth` key and the <symbol> set by `item-sym*` key. The default values are set by `labelsep` key at each level. If positive values are passed it will *offset to the left* and if negative values are passed it will *offset to the right*.

2.4 The command \item in enumext*

The `\item` command for the `enumext*` environment provides an “first optional argument” `\item(<columns>)` which “joins items” between columns. Let’s consider the following examples adapted directly from the `task` package:

```
\begin{enumext*}[widest=10,columns=4]
  \item The first
  \item* The second
  \item The third
  \item The fourth
  \item(3)* The fifth item is way too long for this and needs three columns
  \item The sixth
  \item The seventh
  \item(2)[X] The eighth item is way too long for this and needs two columns
    (\the\itemwidth)
  \item The ninth
  \item[Z] The tenth (\the\itemwidth)
\end{enumext*}
```

1. The first
- ★ 2. The second
3. The third
4. The fourth
- ★ 5. The fifth item is way too long for this and needs three columns
6. The sixth
7. The seventh
- X 8. The eighth item is way too long for this and needs two columns (196.17749pt)
9. The ninth
- Z 10. The tenth (89.28171pt)

3 The command \setenumext

<code>\setenumext</code>	<code>\setenumext{<key = val>}</code>	<code>\setenumext[<keyans*>]{<key = val>}</code>
	<code>\setenumext[<enumext, level>]{<key = val>}</code>	<code>\setenumext[<print, level>]{<key = val>}</code>
	<code>\setenumext[<enumext*>]{<key = val>}</code>	<code>\setenumext[<print, *>]{<key = val>}</code>
	<code>\setenumext[<keyans>]{<key = val>}</code>	<code>\setenumext[<print*>]{<key = val>}</code>

The command `\setenumext` sets the <keys> on a global basis for environments `enumext`, `enumext*`, `keyans`, `keyans*` and the `\printkeyans` command. It can be used both in the preamble and in the body of the document as many times as desired.

The <keys> set in the *optional argument* of environments and commands have the *highest precedence*, overriding both options passed by `\setenumext`. If the *optional argument* is not passed, the first level of the environment `enumext` will be taken by default.

- The key `save-ans` that activate the “storage system” must NOT be passed through this command and must be passed directly in the *optional argument* of the “first level” of the environment in which they are executed.

4 The command \setenumextmeta

<code>\setenumextmeta</code>	<code>\setenumextmeta {<key name>}{<key-one = val, key-two = val, ...>}</code>
	<code>\setenumextmeta*{<key name>}{<key-one = val, key-two = val, ...>}</code>
	<code>\setenumextmeta [<enumext*>]{<key name>}{<key-one = val, key-two = val, ...>}</code>
	<code>\setenumextmeta [<enumext, level>]{<key name>}{<key-one = val, key-two = val, ...>}</code>

The command `\setenumextmeta` adds a new “meta-key” for the environments `enumext` and `enumext*`, the {<key name>} must be different from those defined by the package. If the *optional argument* is not passed, the new “meta-key” will be created for the “first level” of the environment `enumext`.

The *starred argument* ‘*’ will create the new “meta-key” for the environment `enumext*` and for all levels of the environment `enumext`. For example: `\setenumextmeta*{midsep}{topsep=3pt, partopsep=0pt}` will create a new key `midsep` available for all levels of the `enumext` environment and the `enumext*` environment and we can use it like any other key so `\begin{enumext}[midsep]` and `\begin{enumext*}[midsep]` will be valid.

5 The keyval system

The $\langle key = val \rangle$ system used by the `enumext` package is implemented using `l3keys` so it must be taken into consideration that those keys marked as “*value forbidden*”, that is $\langle key \rangle$ is different from $\langle key = \rangle$.

All $\langle keys \rangle$ described in this section are available for the `enumext`, `enumext*`, `keyans` and `keyans*` environments with the exception of the keys `series`, `resume`, `resume*` which are only available for the “*first level*” of the environments `enumext` and `enumext*`; and the keys `mini-right`, `mini-right*` which are only available for the `enumext*` and `keyans*` environments.

All $\langle keys \rangle$ related to vertical or horizontal spacing accept a “*skip*” or “*dim*” expression if passed between braces, i.e. you do not need to use `\dimeval` or `\dimexpr` to perform calculations.

- It should be kept in mind that using any $\langle key \rangle$ that sets a *rubber lengths* or *rigid lengths* for vertical or horizontal space on a level will influence the vertical and horizontal space for *inners levels* and `keyans`, `keyans*` and `keyanspic` environments.

5.1 Keys for label and ref

`mode-box` $\langle value forbidden \rangle$ default: *not used*

This is a “*switch-key*” that does not receive an argument and is “*only*” available for the “*first level*” of the `enumext` environment and the `enumext*` environment. When this is set the `label`, `font`, `wrap-label` and `wrap-label*` keys are executed within `\makebox` for the `enumext` and `keyans` environments.

- This key is intended for compatibility with *tagged* PDF and is forcibly “*enabled*” when `\DocumentMetadata` is present. If you want to get the same document output whether `\DocumentMetadata` is active or not, you must enable this key.
- In the `enumext*` and `keyans*` environments `\makebox` are redefined using `\makebox` by default. If `enumext` or `keyans` is used in the `enumext*` environment the key must be activated manually.

`label` = { $\langle \backslash\alpha^* | \backslash\Alpha^* | \backslash\arabic^* | \backslash\roman^* | \backslash\Roman^* \rangle$ } default: *by levels*

Sets the $\langle label \rangle$ that will be printed at the *current level* and default value for `labelwidth` key. The default value for the first level of the environments `enumext` and `enumext*` are `\arabic*`, for second level are `(\alph*)`, for third level are `\roman*`, and for fourth level are `\Alpha*`. For `keyans` and `keyans*` environments the default value is `\Alpha*`.

- This key is intended to give the basic structure with which the $\langle label \rangle$ will be displayed, and the form in which it is used by standard “*label and ref*” and the “*internal label and ref*” system with the `save-ref` key. You cannot use commands with $\langle label \rangle$ as an argument, for example `\emph{\langle\backslash\alpha^*\rangle}` will return an error. For full customization of how $\langle label \rangle$ is displayed use the `font`, `wrap-label` and/or `wrap-label*` keys.

`labelsep` = { $\langle rigid length \rangle$ } default: `0.3333em`

Sets the *horizontal space* between the box containing the current $\langle label \rangle$ defined by `label` key and the text of an item on the first line. Internally sets the value of `\labelsep` for the current level.

`labelwidth` = { $\langle rigid length \rangle$ } default: *by label*

Sets the *width* of the box containing the current $\langle label \rangle$ set by the `label` key. Internally sets the value of `\labelwidth` for the current level. The default values are calculated by means of the *width* of a box by setting a *value* to the current counter set by `label` key using ‘`0`’ for `\arabic*`, ‘`M`’ for `\Alpha*`, ‘`m`’ for `\alph*`, ‘`VIII`’ for `\Roman*` and ‘`viii`’ for `\roman*`.

`widest` = { $\langle integer | string \rangle$ } default: *empty*

Sets the `labelwidth` key pass the $\langle integer \rangle$ or converting the $\langle string \rangle$ of the form `\Alpha`, `\alph`, `\Roman` or `\roman` to a *value* for the current counter defined by `label` key, then calculating the *width* by means of a box. For example `widest={XXIII}` or `widest={23}` are equivalent. This key is useful when the default values of the `labelwidth` key are smaller than those actually used.

`font` = { $\langle font commands \rangle$ } default: *empty*

Sets the *font style* for the current $\langle label \rangle$ defined by `label` key. For example `font={\bfseries\small}`.

`align` = { $\langle left | right | center \rangle$ } default: *left*

Sets the *aligned* of $\langle label \rangle$ defined by `label` key on the current level in the label box.

`wrap-label` = { $\langle code \{ \#1 \} more code \rangle$ } default: *empty*

Wraps the *current* $\langle label \rangle$ defined by `label` key referenced by `\{ \#1 \}` after executing the `align` and `font` keys. The `\{ \langle code \rangle \}` must be passed between braces and this does not modify the value set by the `labelwidth` key and is applied *only* on `\item` and `\item*`. When using it in the `\setenumext` command it is necessary to use the *double* ‘`\{ \#1 \}`’. For example `wrap-label={\fbox{\#1}}` or you can create a command:

```
\NewDocumentCommand \mywrap { s m }
{
  \IfBooleanTF{\#1}
  {
    {\textcolor{red}{\textbf{Q}}\textcolor{blue}{\textbf{.}}\textcolor{gray}{\#2}}
    {\textcolor{blue}{\textbf{Q}}\textcolor{red}{\textbf{.}}\textcolor{gray}{\#2}}
  }
}
```

and then pass it through the key `wrap-label={\mywrap{\#1}}` or `wrap-label={\mywrap*{\#1}}`.

`wrap-label*` = { $\langle code \{ \#1 \} more code \rangle$ } default: *empty*

The same as the `wrap-label` key but also applies on `\item[custom]`.

`ref = {\code {\alph*|\Alph*|\arabic*|\roman*|\Roman*} more code}` default: *empty*

Modifies the way *cross references* are displayed. The `label` key sets the default form of the *cross references*, by using this key you can define a different format, for example: `ref=\emph{\alph*}` is valid.

Internally it renews the command associated with each counter when it is executed, i.e., in the environment `enumext` the command `\theenumxi` is modified when the key is executed at the first level, `\theenumxii` when it is executed at the second level and `\theenumxiii` together with `\theenumxiv` when it is executed at the third and fourth levels.

- This must be kept in mind, since the values set by the `label` and `ref` keys are not cumulative by levels, so if you have used the `ref` key in the first level and then want to associate the counter with `label` or `ref` in the second level you must use the direct commands, i.e. `\arabic{enumxi}` to indicate the count of the first level instead of using `\theenumxi`.

5.2 Keys for penalties

Page breaks in the provided environments are controlled by the following three parameters, which work together to ensure they look good, avoiding unsightly page breaks that could distort the output.

`beginpenalty = {\integer}` default: *-51*

Set the *page breaking* penalty for breaking at the beginning of the `enumext`, `enumext*`, `keyans`, and `keyans*` environments. Internally sets the value of `\@beginparpenalty`.

`midpenalty = {\integer}` default: *-51*

Set the *page breaking* penalty for breaking between items of the `enumext`, `enumext*`, `keyans`, and `keyans*` environments. Internally sets the value of `\@itempenalty`.

`endpenalty = {\integer}` default: *-51*

Set the *page breaking* penalty for breaking at the end of the `enumext`, `enumext*`, `keyans`, and `keyans*` environments. Internally sets the value of `\@endparpenalty`.

- The values passed to these *keys* affect the nested environments in which they were set and cannot be reset. L^AT_EX default is `-\@lowpenalty`, that is, `-51`. Because it is negative, it somewhat encourages a page break at each spot. Change it with, e.g., `\@beginparpenalty=9999`; a value of `10000` prohibits a page break. Please, refer to your L^AT_EX or T_EX manual about how penalties control page breaks.

5.3 Keys for spaces

`show-length = {\true | false}` default: *false*

Displays on the terminal the values for *all list parameters* at the current level. For *vertical spaces* show the values of `\topsep`, `\itemsep`, `\parsep` and `\partopsep`. For *horizontal spaces* show the values of `\labelwidth`, `\labelsep`, `\itemindent`, `\listparindent` and `\leftmargin`.

5.3.1 Vertical spaces

`topsep = {\rubber length | rigid length}` default: *by levels*

Set the *vertical space* added to both the top and bottom of the list. Internally sets the value of `\topsep` for the current level. The default value for the first level of the environments `enumext` and `enumext*` are `8.0pt` plus `2.0pt` minus `4.0pt`, for second level are `4.0pt` plus `2.0pt` minus `1.0pt`, for third and fourth level are `2.0pt` plus `1.0pt` minus `1.0pt`. For `keyans` and `keyans*` environments the default value is `4.0pt` plus `2.0pt` minus `1.0pt`.

`parsep = {\rubber length | rigid length}` default: *by levels*

Set the *vertical space* between paragraphs within an item. Internally sets the value of `\parsep` for the current level. The default value for the first level of the environments `enumext` and `enumext*` are `4.0pt` plus `2.0pt` minus `1.0pt`, for second level are `2.0pt` plus `1.0pt` minus `1.0pt`, for third and fourth level are `0pt`. For `keyans` and `keyans*` environments the default value is `2.0pt` plus `1.0pt` minus `1.0pt`.

- In the `enumext*` and `keyans*` environments this value is passed to `\parskip` within the `minipage` environment where “item content” is placed.

`partopsep = {\rubber length | rigid length}` default: *by levels*

Set the *vertical space* added, beyond `topsep`, to the “top” and “bottom” of the entire environment if the environment instance is preceded by a “blank line” or `\par` command. Internally sets the value of `\partopsep` for the current level. The default values for first and second level in environment `enumext` are `2.0pt` plus `1.0pt` minus `1.0pt`, for third and fourth level are `1.0pt` minus `1.0pt`. For the `keyans` environment the default value is `2.0pt` plus `1.0pt` minus `1.0pt`, and for the `keyans*` and `enumext*` environments it is available but *without* effect.

- The value of this parameter also affects the *inner levels* and the environments `keyans`, `keyanspic` and `keyans*`. Caution should be taken with “blank lines” or `\par` command “before” each environment or nested level when formatting the source code of document. T_EX will enter *vertical mode* and apply this value to the “top” and “bottom” the environment or nested level.

`itemsep = {\rubber length | rigid length}` default: *by levels*

Set the *vertical space* between items, beyond the `parsep`. Internally sets the value of `\itemsep` for the current level. The default value for the first level of the environments `enumext` and `enumext*` are `4.0pt` plus `2.0pt`

minus 1.0pt, for the rest of the levels are 2.0pt plus 1.0pt minus 1.0pt. For `keyans` and `keyans*` environments the default value is 4.0pt plus 2.0pt minus 1.0pt.

- In the `enumext*` and `keyans*` environments this value corresponds to the separation between rows.

`noitemsep` $\langle \text{value forbidden} \rangle$ default: *not used*
 This is a “meta-key” that does not receive an argument. Set `itemsep` and `parsep` equal to 0pt the entire level of environment.

`nosep` $\langle \text{value forbidden} \rangle$ default: *not used*
 This is a “meta-key” that does not receive an argument. Sets all keys for vertical spacing equal to 0pt the entire level of environment.

`base-fix` $\langle \text{value forbidden} \rangle$ default: *not used*
 This is a “switch-key” that does not receive an argument available *only* for the “first level” of environment `enumext`. Fix the *baseline* when an environment `enumext` is nested in `enumext*` and there is no material between the `\item` and the start of the environment for example `\item \begin{enumext}` within the environment `enumext*`. Internally sets the keys `topsep`, `above` and `above*` at 0pt.

- This key is provided as a way to work around this minor issue, but you should be aware that if for some reason you have the `itemindent` key set in the `enumext*` environment it will be lost and you will need to adjust it using the `list-offset` key in the `enumext` environment.

Extra vertical spaces

- The following $\langle \text{keys} \rangle$ should be used with “caution”, they are intended to be used at the “top” and “bottom” of the environment when the `columns` or `mini-env` keys do not provide adequate *vertical spaces*. The values passed can be *rubber* or *rigid* lengths, the way they are applied is the way you differ, using the star ‘*’ $\langle \text{keys} \rangle$ applies `\vspace*` so that \LaTeX does *not discard* this space at page break.

`above` = $\{ \langle \text{rubber length} \mid \text{rigid length} \rangle \}$ default: *not used*

Set the *extra vertical space* added, beyond `topsep`, to the top of the entire level of environment. This key is intended to give a “fine adjustment” of the vertical space “above” the environment without hindering the value of the `topsep` key. The space is added with `\vspace` so is “discardable”.

`above*` = $\{ \langle \text{rubber length} \mid \text{rigid length} \rangle \}$ default: *not used*

Set the *extra vertical space* added, beyond `topsep`, to the top of the entire level of environment. This key is intended to give a “fine adjustment” of the vertical space “above” the environment without hindering the value of the `topsep` key. The space is added with `\vspace*` so is “not discardable”.

`below` = $\{ \langle \text{rubber length} \mid \text{rigid length} \rangle \}$ default: *not used*

Set the *extra vertical space* added, beyond `topsep`, to the bottom of the entire level of environment. This key is intended to give a “fine adjustment” of the vertical space on the “below” the environment without hindering the value of the `topsep` key. The space is added with `\vspace` so is “discardable”.

`below*` = $\{ \langle \text{rubber length} \mid \text{rigid length} \rangle \}$ default: *not used*

Set the *extra vertical space* added, beyond `topsep`, to the bottom of the entire level of environment. This key is intended to give a “fine adjustment” of the vertical space on the “below” the environment without hindering the value of the `topsep` key. The space is added with `\vspace*` so is “not discardable”.

5.3.2 Horizontal spaces

`list-offset` = $\{ \langle \text{rigid length} \rangle \}$ default: 0pt

Sets the *horizontal translation* of the entire environment level from the left edge of the box defined by the `labelwidth` key. Internally sets the values of `\leftmargin` and `\itemindent` for the current level.

`list-indent` = $\{ \langle \text{rigid length} \rangle \}$ default: `labelwidth + labelsep`

Sets the *indentation* of the whole environment under the box defined by `labelwidth` and `labelsep` keys. Internally sets the value of `\leftmargin` and `\itemindent` for the current level. If `list-indent=0pt` is set in the environments `enumext` and `keyans` the $\langle \text{label} \rangle$ will be part of the text, separated by the value of the `labelsep` key and the *first word*, in simple terms it will look like a “common paragraph”.

- The `enumext*` and `keyans*` environments are implemented using `\makebox` and `minipage` which causes “list indent” to always be equal to the value passed to `labelwidth` plus `labelsep`. Passing a value to this key is equivalent to setting the value for the `list-offset` key.

`itemindent` = $\{ \langle \text{rigid length} \rangle \}$ default: 0pt

Sets the extra *horizontal indentation*, beyond `labelsep`, of the “first line” off each `\item` that is not followed by a “blank line” or the `\par` command. This value must be greater than or equal to 0pt and is applied internally using `\hspace` without modifying the value of `\itemindent`.

- This key is intended for the `enumext*` and `keyans*` environments where, by their implementation, it is not possible to adjust `labelwidth` and `list-indent` without modifying the output. If you use `enumext` or `keyans` and want to get around the *blank line* limitation or the `\par` command followed by `\item` you can modify `labelwidth` and `list-indent` and get the same effect.

`rightmargin = {⟨rigid length⟩}` default: `0pt`

Set the *horizontal space* between the right margin of the environment and the right margin of the enclosing environment, the value it takes must be greater than or equal to `0pt`. Internally sets the value of `\rightmargin` for the current level.

`listparindent = {⟨rigid length⟩}` default: `0pt`

Sets the *horizontal space* indentation, beyond `list-indent`, for second and subsequent paragraphs within a list item. Internally sets the value of `\listparindent` for the current level.

- In the `enumext*` and `keyans*` environments this value is passed to `\parindent` within the `minipage` environment where “item content” is placed.

5.4 Keys for add code

The following *⟨keys⟩* should be used with “caution”, they are intended to inject `{⟨code⟩}` into different parts of the defined environments. We must keep in mind that the defined environments are based on the `list` base environment provided by \TeX which is defined (simplified) as plain form `\list{⟨arg one⟩}{⟨arg two⟩}`. Using the `before*` key does not allow access to the `list` parameters defined by `[⟨key = val⟩]`.

`before = {⟨code⟩}` default: *not used*

Execute `{⟨code⟩}` “before” the environment starts. The `{⟨code⟩}` must be passed between braces, is executed “after” all calculations related to the *list parameters* in the environment and the *⟨keys⟩* sets by `[⟨key = val⟩]` have been performed, with the exception of the *⟨keys⟩* `start` and `start*`, that is, in the *second argument* of the list: `\begin{list}{⟨arg one⟩}{⟨arg two⟩}{⟨code⟩}`.

`before* = {⟨code⟩}` default: *not used*

Execute `{⟨code⟩}` “before” the environment starts. The `{⟨code⟩}` must be passed between braces, is executed “before” performing all calculations related to the *list parameters* and the *⟨keys⟩* sets in `[⟨key = val⟩]` of the environment that is, “before” the arguments defining the list environment are executed: `{⟨code⟩}\begin{list}{⟨arg one⟩}{⟨arg two⟩}`.

`first = {⟨code⟩}` default: *not used*

Executes `{⟨code⟩}` when “starting” the environment. The `{⟨code⟩}` must be passed between braces, is executed right “after” all *list parameters* are done, after the second argument of list, just before the first occurrence of `\item`: `\begin{list}{⟨arg one⟩}{⟨arg two⟩}{⟨code⟩}\item`.

- Keep in mind that the `{⟨code⟩}` set in this *⟨key⟩* will affect the entire “body” of the environment and therefore the inner levels of the list and the `keyans`, `keyans*` and `keyanspic` environments. It is recommended to set this *⟨key⟩* per level. In the `enumext*` and `keyans*` environments this *⟨key⟩* is executed “after” the `listparindent`, `parsep` and `itemindent` *⟨keys⟩* within the `minipage` environment in which the “item content” is placed.

`after = {⟨code⟩}` default: *not used*

Execute `{⟨code⟩}` “after” finishing the environment. The `{⟨code⟩}` must be passed between braces.

5.5 Keys for start, series and resume

`start = {⟨integer | integer expression⟩}` default: `1`

Sets the *start value* of the numbering on the current level. The `{⟨integer expression⟩}` must be passed between braces, internally is evaluated and pass to the counter defined by `label` key on the current level, i.e. it is equivalent to enter `start={\dimeval{100*⟨value{chapter}}}` or `start={100*⟨value{chapter}}}`.

`start* = {⟨integer | string⟩}` default: *not used*

Sets the *start value* of the numbering on the current level. Internally *⟨string⟩* is converted and passed as value to the counter defined by `label` key on the current level, i.e. it is equivalent to enter `start*=5`, `start*=E` or `start*=v`.

- For compatibility with tagged PDF, the *start counter* are set “after” the *second argument* to the `list` environment and “before” the execution of the first `\item` and the `first` key: `\begin{list}{⟨arg one⟩}{⟨arg two⟩}\setcounter{enumX}\item`.
- The following *⟨keys⟩* are “only” available for the `enumext*` environment and the “first level” of the `enumext` environment and are ignored if set when nested within each other.

`series = {⟨series name⟩}` default: *not used*

Stores the *keys* of the *optional argument* of the “first level” of the environment in which it is executed in `{⟨series name⟩}` which is used as an argument in the key `resume`. The *⟨keys⟩* stored in `{⟨series name⟩}` are not cumulative and are overwritten if the same `{⟨series name⟩}` is used again.

`resume = {⟨series name⟩}` default: *not used*

Sets the *start value* and *options* for the “first level” continuing the numbering of the environment in which the `series={⟨series name⟩}` key was executed. If passed *without value* this will only set *start value* continue the numbering from the last environment in which `series={⟨series name⟩}` or `resume={⟨series name⟩}` is NOT present and if the `save-ans` key is active it will continue the numbering from the last environment in which it was executed. The *start value* can be overwritten using `start` or `start*` keys.

`resume* ⟨value forbidden⟩` default: *not used*

Sets the *start value* and *options* for the “first level” continuing the numbering of the environment in which the `series={⟨series name⟩}` or `resume={⟨series name⟩}` keys are NOT present, if the `save-ans` key is active

it will continue the numbering from the last environment in which it was executed. The *start value* can be overwritten using `start` or `start*` keys.

- For security reasons the `series` key will never save in $\{\langle series\ name\rangle\}$ the keys `series`, `resume`, `resume*`, `save-ans`, `save-key`, `start*` and `start`. When using the key `resume=\{\langle series\ name\rangle\}` it will have hierarchy in the $\langle keys\rangle$ that are saved in $\{\langle series\ name\rangle\}$, in order to establish the value of a $\langle key\rangle$ already saved in $\{\langle series\ name\rangle\}$ it must be placed to the “right” of `resume=\{\langle series\ name\rangle\}`, the same thing happens with the `resume*` key, the exception is the `save-ans` key that must be placed on the “left” if you want to start the numbering with its value. The `resume` key passed “without value” must be exactly “without value”, i.e. `resume=` cannot be used and if executed before `resume*` it will affect the *start value*.

5.6 Keys for multicols

`columns = \{\langle integer\rangle\}`

default: 1

Set the *number of columns* to be used by the `multicols` environment within the environments `enumext` and `keyans`. The value must be a positive integer less than or equal to 10. In the `enumext*` and `keyans*` environments they correspond to the default number of columns (without joining) and internally adjust the value of `\itemwidth`.

`columns-sep = \{\langle rigid\ length\rangle\}`

default: by level

Set the *space between columns* used by the `multicols` environment within the environments `enumext` and `keyans`. Internally sets the value of `\columnsep`, by default its value is equal to the sum of the values set in the keys `labelwidth` and `labelsep` of the current level. In the `enumext*` and `keyans*` environments they correspond to the *space between columns* (without joining) and internally adjust the value of `\itemwidth`.

5.7 Keys for minipage

`mini-env = \{\langle rigid\ length\rangle\}`

default: not used

Sets the *width* of the `minipage` environment on the “right side”. This value added to the value set by the `mini-sep` key to determines the *width* of the `minipage` environment on the “left side”, taking `\linewidth` as the maximum reference value.

`mini-sep = \{\langle rigid\ length\rangle\}`

default: 0.3333em

Sets the *space between* the `minipage` environment on the “left side” and the `minipage` environment on the “right side”. This separation is applied together with `\hfill`.

5.7.1 The command \miniright

```
\miniright \begin{enumext}[mini-env=\{\langle rigid\ length\rangle\}] \langle item's before\rangle \item \miniright \langle content\rangle \end{enumext}
\begin{enumext}[mini-env=\{\langle rigid\ length\rangle\}] \langle item's before\rangle \item \miniright* \langle content\rangle \end{enumext}
```

The `\miniright` command close the `minipage` environment on the “left side” and opens the `minipage` environment on the “right side” by starting it with the `\centering` command. It must be placed “after” the last `\item` of the current environment and “before” starting the material to be placed on the “right side”.

The *starred argument* “*” inhibits the use of `\centering` command i.e. the usual L^AT_EX justification is maintained in the `minipage` on the “right side”.

5.7.2 The key mini-right

In the *horizontal list environments* `enumext*` and `keyans*` it is not possible to use the `\miniright` command and the `mini-right` key must be used instead.

`mini-right = \{\langle content\rangle\}`

default: not used

Set the *content* for the drawing or tabular to be placed in the `minipage` environment on the “right side” by starting it with `\centering`. The $\{\langle content\rangle\}$ must be passed between braces.

`mini-right* = \{\langle content\rangle\}`

default: not used

Same as above, but *without* starting with `\centering`.

6 The storage system

The entire mechanism for “*storing content*” it is activated according to `save-ans` key on the “*first level*” of `enumext` or `enumext*` environments and it is ignored if they are established when they are nested inside each other. Only when this $\langle key\rangle$ is “*active*” the `\anskey` command and the environments `anskey*`, `keyans`, `keyans*` and `keyanspic` are available.

<code>\begin{enumext}[save-ans=\{\langle store\ name\rangle\}]</code>	<code>\begin{enumext}[save-ans=\{\langle store\ name\rangle\}]</code>
<code>\item Text \anskey{answer}</code>	<code>\item Text \anskey{answer}</code>
<code>\item Text</code>	<code>\item Text</code>
<code>\begin{keyans}</code>	<code>\begin{keyanspic}</code>
<code>...</code>	<code>...</code>
<code>\end{keyans}</code>	<code>\end{keyanspic}</code>
<code>\end{enumext}</code>	<code>\end{enumext}</code>

By executing the key `save-ans=\{\langle store\ name\rangle\}` the entire “*structure*” of the environment (excluding the *first level*) including the *optional argument* passed to the inner levels or the environment nested in it, along with the

$\langle content \rangle$ passed to $\backslash anskey$ or $anskey^*$, the current $\langle labels \rangle$ for $\backslash item^*$ and $\backslash anspic^*$ in the environments $keyans$, $keyans^*$ and $keyanspic$ will be “stored” in a *sequence* $\{\langle store name \rangle\}$ and at the same time will be “stored” (without the “structure” or *optional argument*) in a *prop list* $\{\langle store name \rangle\}$.

For security reasons the *optional argument* of the inner levels or the nested environment are *filtered* by excluding all $\langle keys \rangle$ related to the “storage system” (§6.1) along with the keys `mini-env`, `mini-sep`, `mini-right`, `mini-right^*`, `series`, `resume` and `resume^*` when storing in *sequence* $\{\langle store name \rangle\}$ set by `save-ans` key.

6.1 Keys for storage system

The only $\langle keys \rangle$ available for all levels of the `enumext` environment and the `enumext^*` environment are `no-store` and `save-key`, the rest of the $\langle keys \rangle$ described in this section must be passed directly in the *optional argument* of the “first level” of the environment in which the key `save-ans` is executed. The key `save-ans` should NOT be passed with the command `\setenumext`.

`save-ans` = $\{\langle store name \rangle\}$ default: *not set*

Sets the *name* of the *sequence* and *prop list* in which the $\{\langle contents \rangle\}$ will be “stored” by $\backslash anskey$ and $anskey^*$ in `enumext` and `enumext^*` environments and the current $\langle labels \rangle$ for $\backslash item^*$ and $\backslash anspic^*$ in the environments $keyans$, $keyans^*$ and $keyanspic$. If the *sequence* or *prop list* $\{\langle store name \rangle\}$ does not exist, it will be created globally and will not be *overwritten* if the key is used again.

`save-key` = $\{\langle key list \rangle\}$ default: *not set*

This key *overrides* the default “stored keys” of the *optional argument* of the inner levels or nested environment that will be passed to the *sequence*. The $\langle key list \rangle$ passed to this key ignores any $\langle keys \rangle$ in the “stored structure” and must be passed between braces. For example, if we execute at a second level:

```
\begin{enumext}[save-ans={\langle store name \rangle}]
  \item Text \anskey{answer}
  \item Text
    \begin{enumext}[nosep, columns=2, save-key={columns=3}]
      ...
    \end{enumext}
\end{enumext}
```

The “stored keys” by default in the *sequence* $\{\langle store name \rangle\}$ would be `nosep`, `columns=2`, but using the key `save-key={columns=3}` will overwrite and the “stored key” in the *sequence* $\{\langle store name \rangle\}$ are only `columns=3` ignoring all the others.

`save-sep` = $\{\langle text symbol \rangle\}$ default: $\{, \}$

Sets the *text symbol* that will separate the current $\langle label \rangle$ to the *optional argument* passed to the $\backslash item^*$ and $\backslash anspic^*$ in the environments $keyans$, $keyans^*$ and $keyanspic$ and storing them in the *sequence* and *prop list* $\{\langle store name \rangle\}$ set by `save-ans` key. The $\{\langle text symbol \rangle\}$ must always be passed between braces, whitespace ‘`␣`’ is preserved within the braces and only affects the “stored content” and not what is displayed when using the `show-ans` or `show-pos` keys.

`no-store` $\langle value forbidden \rangle$ default: *not used*

This is a “switch-key” that does not receive an argument and disables the “storing content” in the *sequence* and *prop list* $\{\langle store name \rangle\}$ set by `save-ans` key at the entire level or a nested environment in which it runs. This key is intended for use in internal levels or nested `enumext` or `enumext^*` environments in which you want to use `enumext` or `enumext^*` but “without” using the `\anskey` command or use $anskey^*$ environment and “without” interfering with the `check-ans` key.

6.1.1 Keys for label and ref

`save-ref` = $\{\langle true | false \rangle\}$ default: *false*

Activates the “internal label and ref” mechanism for referencing “stored content” in *prop list* $\{\langle store name \rangle\}$ set by `save-ans` key. To reference the location of the “stored content” within the environment you must use $\backslash ref\{\langle store name : position \rangle\}$, where $\langle position \rangle$ corresponds to the position occupied by the “stored content” in the *prop list* $\{\langle store name \rangle\}$ returned by the `show-pos` key. For example $\backslash ref\{test:4\}$ will return `3`. (b) which corresponds to the location of the “stored content” at position `4` in *prop list* `test` within the environment in which the key `save-ans=test` was set.

`mark-ref` = $\{\langle symbol \rangle\}$ default: `\textreferencemark`

Sets the *symbol* that will be displayed by the `\printkeyans` command only if the `hyperref` package is detected and the `save-ref` key are active. This “symbol” is used as a “link” between the environment in which the `save-ans` key was used and the place where the command is executed.

6.1.2 Keys for wrap and marks

The `enumext` package provides a set of $\langle keys \rangle$ to set and manipulate “symbol marks” associated with “answers” and how they are displayed and stored in the *sequence* and *prop list*.

The $\langle keys \rangle$ available for the $\backslash anskey$ command and the $anskey^*$ environment can be passed “only” in the *optional argument* in the “first level” of the `enumext` or `enumext^*` environment.

The $\langle keys \rangle$ available for the $keyans$ and $keyans^*$ environments can be passed locally in the *optional argument*, at the “first level” of the `enumext` or `enumext^*` environment or via the `\setenumext` command with one

minor difference, when $\langle keys \rangle$ are passed through the “first level” of the `enumext` or `enumext*` environment they are set in “both” environments, but when they are passed using the `\setenumext` command they are set “individually” in each environment.

`show-ans = { $\langle true | false \rangle$ }` default: `false`

Display the *symbol* set by the `mark-ans` key to the left of the *mandatory argument* $\langle content \rangle$ passed to the `\anskey` command and $\langle body \rangle$ for the `anskey*` environment using the `wrap-ans` key if set.

For `\item*` and `\anspic*` the `keyans`, `keyans*` and `keyanspic` environments it will display the *symbol* set by the `mark-ans*` key to the left of the current $\langle label \rangle$ and *optional argument*. If the *optional argument* is present in `\item*` or `\anspic*` it will be shown using `wrap-opt` key.

Keys for `\anskey` and `anskey*`

`mark-ans = { $\langle symbol \rangle$ }` default: `\textasteriskcentered`

Sets the *symbol* to be displayed in the left margin for `\anskey` command and `anskey*` environment when using the key `show-ans`. The “*symbol*” is placed in a box of width equal to the value of `labelwidth` at the current level, separated by the value of the key `mark-sep` and aligned by the value of the key `mark-pos`. This key is not affected by the keys `font` or `wrap-label` so if you want to apply *styling* you have to do it directly, for example: `mark-ans={\textcolor{red}{\textbf{\textasteriskcentered}}}`

`mark-pos = { $\langle left | right | center \rangle$ }` default: `left`

Sets the *aligned* of the “*symbol*” defined by `mark-ans` key for `\anskey` command and `anskey*` environment. The “*symbol*” is aligned in a box with the same dimensions of the label box defined by `labelwidth` key on the current level and separated by the value of the `mark-sep` key.

`mark-sep = { $\langle rigid length \rangle$ }` default: `labelsep`

Sets the *horizontal space* between the box containing the “*symbol*” defined by `mark-ans` key and the *mandatory argument* $\langle content \rangle$ passed to the `\anskey` command and the *body* in `anskey*` environment.

`wrap-ans = { $\langle code \{ \#1 \} \text{ more code} \rangle$ }` default: `\fbox+\parbox{\#1}`

Wraps the *mandatory argument* $\langle content \rangle$ passed to the `\anskey` and the *body* in `anskey*` environment referenced by $\{ \#1 \}$ when using the `show-ans` or `show-pos` keys. The $\{ \langle code \rangle \}$ must be passed between braces and only affects how the *argument* or *body* is displayed and NOT the “*stored content*” in the *sequence* and *prop list* $\{ \langle store name \rangle \}$ set by `save-ans` key. If this key is passed using `\setenumext` it is necessary to use double ‘ $\{ \# \#1 \}$ ’.

Keys for `keyans`, `keyans*` and `keyanspic`

`mark-ans* = { $\langle symbol \rangle$ }` default: `\textasteriskcentered`

Sets the *symbol* to be displayed in the left margin for `\item*` and `\anspic*` for the `keyans`, `keyans*` and `keyanspic` environments when using the key `show-ans`. The “*symbol*” is placed in a box of width equal to the value of `labelwidth` of the environment in which it is executed, separated by the value of the key `mark-sep*` and aligned by the value of the key `mark-pos*`. This key is not affected by the keys `font` or `wrap-label` so if you want to apply *styling* you have to do it directly, for example: `mark-ans*={\textcolor{red}{\textbf{\textasteriskcentered}}}`.

`mark-pos* = { $\langle left | right | center \rangle$ }` default: `left`

Sets the *aligned* of the “*symbol*” defined by `mark-ans*` key for the `keyans`, `keyans*` and `keyanspic` environments. The “*symbol*” is aligned in a box with the same dimensions of the label box defined by `labelwidth` key of the environment in which it is executed and separated by the value of the `mark-sep*` key.

`mark-sep* = { $\langle rigid length \rangle$ }` default: `labelsep`

Sets the *horizontal space* between the box containing the “*symbol*” defined by `mark-ans*` key and the current $\langle label \rangle$ for `\item*` and `\anspic*` in the `keyans`, `keyans*` and `keyanspic` environments.

`wrap-ans* = { $\langle code \{ \#1 \} \text{ more code} \rangle$ }` default: `not used`

Wraps the *current* $\langle label \rangle$ when using the `show-ans` key for `\item*` and `\anspic*` referenced by $\{ \#1 \}$ in the `keyans`, `keyans*` and `keyanspic` environments after executing the `align` and `font` keys. The $\{ \langle code \rangle \}$ must be passed between braces and *only* affects how the $\langle label \rangle$ is displayed and NOT the “*stored label*” in the *sequence* and *prop list* $\{ \langle store name \rangle \}$ set by `save-ans` key. This key overwrites the key `wrap-label` and if is passed using `\setenumext` it is necessary to use double ‘ $\{ \# \#1 \}$ ’. For example, if you want the $\langle label \rangle$ to be displayed in red when using `show-ans` you just set `wrap-ans*={\textcolor{red}{\#1}}`.

`wrap-opt = { $\langle code \{ \#1 \} \text{ more code} \rangle$ }` default: `[[\#1]]`

Wraps the *optional argument* passed to the `\item*` and `\anspic*` referenced by $\{ \#1 \}$ in the `keyans`, `keyans*` and `keyanspic` environments when using the `show-ans` or `show-pos` keys. The $\{ \langle code \rangle \}$ must be passed between braces and *only* affects the current *optional argument* and NOT the “*stored content*” in the *sequence* and *prop list* $\{ \langle store name \rangle \}$ set by `save-ans` key. If this key is passed using `\setenumext` it is necessary to use double ‘ $\{ \# \#1 \}$ ’.

6.1.3 Keys for debug and checking

`show-pos = {⟨true | false⟩}` default: *false*

Displays the *position* occupied by the “stored content” by `\anskey`, `anskey*`, `\item*` and `\anspic*` in the *prop list* {⟨*store name*⟩} set by `save-ans` key. This position is used by the `\getkeyans` command and by the `\ref` command if the `save-ref` key is active.

`check-ans = {⟨true | false⟩}` default: *false*

Enables the *checking answer* mechanism displaying an appropriate message on the terminal. This key works under the logic that each `\item` or `\item*` that does not open an inner level or nested environment contains “only one answer” or “only one execution” of the `\anskey` or `anskey*`. It is intended to be used in conjunction with the `no-store` key.

6.2 The command `\anskey`

`\anskey` `\anskey`[⟨*keys*⟩][⟨*content*⟩]

The command `\anskey` takes a mandatory non empty argument {⟨*content*⟩} and “stores” it in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key. By design the command cannot be nested or passed *verbatim material* in the argument and it is assumed that each *numbered* `\item` or `\item*` within the environment in which it is active it has a “single execution” of `\anskey` unless `\item` or `\item*` open a nested level or use the `no-store` key.

If `save-ref` key are active and the `hyperref`[8] package is detected, `\hyperlink` and `\hypertarget` will be used, otherwise the usual “label and ref” system provided by L^AT_EX will be used.

The `\anskey` command is available for all levels of the `enumext` environment and the `enumext*` environment, but is disabled for the `keyans`, `keyans*` and `keyanspic` environments.

6.2.1 Keys for `\anskey`

By default the *mandatory argument* {⟨*content*⟩} passed to `\anskey` when “storing” in the *sequence* {⟨*store name*⟩} has the form `\item` {⟨*content*⟩}, the following {⟨*keys*⟩} allow modifying the way in which it is “stored” in the *sequence*.

`break-col` {⟨*value forbidden*⟩} default: *not used*

Stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form `\columnbreak` `\item` {⟨*content*⟩}.

`item-join` = {⟨*columns*⟩} default: *not set*

Set the *number of columns* to be used for `\item`(⟨*columns*⟩) and stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form `\item`(⟨*columns*⟩) {⟨*content*⟩}.

`item-star` {⟨*value forbidden*⟩} default: *not used*

Stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form `\item*` {⟨*content*⟩}.

`item-sym*` = {⟨*symbol*⟩} default: *not set*

Sets the *symbol* for `\item*` when using the key `item-star` and stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form `\item*`[⟨*symbol*⟩] {⟨*content*⟩}. The *symbol* can be in text or math mode, for example `item-sym*={\ast}` stores `\item*`{\ast} {⟨*content*⟩}.

`item-pos*` = {⟨*rigid length*⟩} default: *not set*

Sets the *offset* for `\item*` when using the keys `item-star` and `item-sym*` and stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form `\item*`[⟨*symbol*⟩][⟨*offset*⟩] {⟨*content*⟩}.

Example

```
\begin{enumext}[save-ans=test,show-ans=true]
  \item* Text containing our instructions or questions. \anskey{first answer}
  \item Text containing our instructions or questions.
    \begin{enumext}
      \item Question.\anskey{second answer}
    \end{enumext}
  \item Text containing our instructions or questions. \anskey{third answer}
  \item Text containing our instructions or questions. \anskey{fourth answer}
\end{enumext}
```

2. Text containing our instructions or questions.

(a) Question.

*

second answer
3. Text containing our instructions or questions.

*

third answer

4. Text containing our instructions or questions.

*

fourth answer

6.3 The environment anskey*

anskey* `\begin{anskey*}[\langle key = val \rangle] \langle body content \rangle \end{anskey*}`

The environment `anskey*` takes a mandatory `\langle body content \rangle` and “stores it” in the *sequence* and *prop list* `\langle store name \rangle` set by `save-ans` key. If `save-ref` key are active and the `hyperref`[8] package is detected `\hyperLink` and `\hypertarget` will be used, otherwise the usual “*label and ref*” system provided by \LaTeX will be used.

By design the environment cannot be nested but full supports “*verbatim material*” in the `\langle body \rangle` and it is assumed that “*each numbered*” `\item` or `\item*` within the environment in which it is active it has a “*single execution*” unless `\item` or `\item*` open a nested level or use the `no-store` key.

The `anskey*` environment is implemented using the new “*collect code*” c-type argument part of \LaTeX release 2025-06-01[13]. `\begin{anskey*}` and `\end{anskey*}` must be in different lines and should not appear within verbatim environments or commands. All `\langle keys \rangle` must be passed separated by commas and “without separation” of the start of the environment.

Comments “%” or “any character” after `\begin{anskey*}` or `[\langle key = val \rangle]` on the same line are NOT supported, \LaTeX will return an “error” message if this happens. In a similar way comments “%” or “any character” after `\end{anskey*}` on the same line \LaTeX will return a “warning” message.

6.3.1 Keys for anskey*

The `anskey*` environment uses the same `\langle keys \rangle` as the `\anskey` command next to the `\langle keys \rangle` `write-env`, `overwrite` and `force-eol`. The environment is available for all levels of the `enumext` environment and the `enumext*` environment, but it is disabled for the `keyans`, `keyans*` and `keyanspic` environments.

`write-env` = `\langle file.ext \rangle` default: *not used*

Sets the name of the `\langle external file \rangle` in which the `\langle contents \rangle` of the environment will be written. The `\langle file.ext \rangle` will be created in the working directory, relative or absolute paths are not supported. If `\langle file.ext \rangle` does not exist, it will be created or overwritten if the `overwrite` key is used.

`overwrite` = `\langle true | false \rangle` default: *false*

Sets whether the `\langle file.ext \rangle` generated by `write-env` from the `anskey*` environment will be rewritten.

`force-eol` = `\langle true | false \rangle` default: *false*

Sets if the *end of line* for the `\langle stored content \rangle` is hidden or not. This key is necessary only if the last line is the closing of some environment defined by the `fancyvrb` package as `\end{Verbatim}` or another environment that does not support a comments “%” after closing `\end{Verbatim}%`.

Example

```
\begin{enumext}[save-ans=test,show-pos=true,start=5]
  \item* Text containing our instructions or questions.

  \begin{anskey*}[item-star]
    \langle first answer \rangle
  \end{anskey*}

  \item Text containing our instructions or questions.

  \begin{enumext}
    \item Question.
    \begin{anskey*}
      \langle second answer \rangle
    \end{anskey*}
  \end{enumext}

  \item Text containing our instructions or questions.

  \begin{anskey*}
    \langle third answer \rangle
  \end{anskey*}

  \item Text containing our instructions or questions.

  \begin{anskey*}
    \langle fourth answer \rangle
  \end{anskey*}
\end{enumext}
```

★ 5. Text containing our instructions or questions.

[5] First answer with verbatim

6. Text containing our instructions or questions.

(a) Question.

[6] second answer

7. Text containing our instructions or questions.

[7] third answer

8. Text containing our instructions or questions.

[8] fourth answer

6.4 The environments `keyans` and `keyans*`

`keyans` `\begin{keyans}[\langle key = val \rangle] \item \item[\langle custom \rangle] \item* \item*[\langle content \rangle] \end{keyans}`

`keyans*` `\begin{keyans*}[\langle key = val \rangle] \item \item[\langle custom \rangle] \item* \item*[\langle content \rangle] \end{keyans*}`

The `keyans` and `keyans*` environments are “*enumerated list*” environments designed for “*multiple choice*” questions activated by the `save-ans` key. This environments can NOT be nested and must always be at the “*first level*” of the `enumext` environment, the commands `\item` and `\item[\langle custom \rangle]` work in the usual and the command `\item(\langle columns \rangle)` is available for the `keyans*` environment.

🟡 The behavior of `\item*` in `keyans` and `keyans*` environments is NOT the same as in the `enumext` or `enumext*` environments.

```
\begin{enumext}[save-ans=test]
  \item \langle item content \rangle
  \begin{keyans}[\langle key = val \rangle]
    \item \langle item content \rangle
    \item [\langle custom \rangle] \langle item content \rangle
    \item* \langle item content \rangle
    \item*[\langle content \rangle] \langle item content \rangle
  \end{keyans}
\end{enumext}
```

```
\begin{enumext}[save-ans=test]
  \item \langle item content \rangle
  \begin{keyans*}[\langle key = val \rangle]
    \item \langle item content \rangle
    \item [\langle custom \rangle] \langle item content \rangle
    \item* \langle item content \rangle
    \item*[\langle content \rangle] \langle item content \rangle
  \end{keyans*}
\end{enumext}
```

The `\langle keys \rangle` set in the *optional argument* of the environment are the same (almost) as those of the `enumext` and `enumext*` environments and have *higher precedence* than those set by `\setenumext[\langle keyans \rangle]{\langle key = val \rangle}` or `\setenumext[\langle keyans* \rangle]{\langle key = val \rangle}`. If the *optional argument* is not passed or the `\langle keys \rangle` are not set by `\setenumext`, the default values will be the same as the “*second level*” of the `enumext` environment with the difference in the `\langle label \rangle` which will be set to `label=\Alph*`.

The keys `mark-ans*`, `mark-pos*`, `mark-sep*`, `save-sep`, `wrap-opt`, `wrap-ans*`, `show-ans` and `show-pos` are available for both environments.

6.4.1 The `\item*` in `keyans` and `keyans*`

`\item*` `\item*`
`\item*[\langle content \rangle]`

The `\item*` and `\item*[\langle content \rangle]` command “*store*” the current `\langle label \rangle` set by `label` key next to the *optional argument* `\langle content \rangle` in *sequence* and *prop list* `{\langle store name \rangle}` set by `save-ans` key in the “*first level*” of the `enumext` or `enumext*` environments.

The *starred argument* “`*`” cannot be separated by spaces ‘`␣`’ from the command, i.e. `\item*` and the *optional argument* does “*NOT*” support *verbatim content*. By design it is assumed that the `\item*` will only appear “*once*” within the environment.

Example

```
\begin{enumext}[save-ans=test,columns=2,show-ans=true]
  \item Text containing a question.

  \begin{keyans*}[nosep,columns=2]
    \item Choice
    \item* Correct choice
    \item Choice
    \item Choice
    \item Choice
  \end{keyans*}

  \item Text containing a question and image.

  \begin{keyans}[nosep,mini-env={0.4\linewidth}]
    \item Choice
    \item Choice
    \item Choice
    \item Choice
    \item*[\langle note \rangle] Correct choice
    \miniright
    \includegraphics[scale=0.25]{example-image-a}
    Some text
  \end{keyans}
```

```
\end{keyans}  
\end{enumext}
```

* E) [note] Correct choice

Some text

6.5 The environment keyanspic

```
keyanspic \begin{keyanspic}[\langle key = val \rangle] \anspic*[\langle content \rangle]{\langle drawing or tabular \rangle} \end{keyanspic}
```

The `keyanspic` environment is an “*enumerated list*” environment activated by the `save-ans` key that has the same configuration for “*spacing*” and `\label` as the `keyans` environment that uses the `\anspic` command instead of `\item`. It is intended for placing *drawings or tabular* with `\label` centered *above* or *below* in a *single line* or *upper and lower* layout style.

When the `keyanspic` environment is used *without keys* the `\labels` are centered *below* the *drawings or tabular* in a *single line* layout style.

A representation of the output can be seen in the figure 6.

Figure 6: Representation of the `keyanspic` environment with `layout-sty={3, 2}` in `enumext`.

This environment cannot be nested and must *always* be at the “*first level*” of the `enumext` environment, the `\item` command is disabled and `\keys` cannot be set using `\setenumext`.

6.5.1 Keys for keyanspic

```
label-pos = {\langle above | below \rangle} default: below
```

Set the *position* of `\label` to be centered “*above*” or “*below*” *drawings or tabular* when the `\anspic` command is executed.

```
label-sep = {\langle rubber length | rigid length \rangle} default: internal adjustment
```

Set the *vertical spacing* between the `\label` centered “*above*” or “*below*” and *drawings or tabular* when running the `\anspic` command.

```
layout-sty = {\langle n° upper , n° lower \rangle} default: not set
```

Set the *number of drawings or tabular* that will be distributed “*upper*” and “*lower*” within the environment when executing the `\anspic` command. The value must be passed in braces and if not set or the `\n° lower` is omitted the *drawings or tabular* will be put on a *single line*.

```
layout-sep = {\langle rubber length | rigid length \rangle} default: adjusted parsep from keyans
```

Set the *vertical separation* between the number of *drawings or tabular* placed at the “*upper*” and “*lower*” within the environment when executing the `\anspic` command. Internally adjusts the `parsep` value taken from the `keyans` environment.

```
layout-top = {\langle rubber length | rigid length \rangle} default: adjusted topsep from keyans
```

Set the *vertical space* added to both the top and bottom of the environment. Internally adjust the value of `topsep` taken from `keyans` environment.

The keys `mark-ans*`, `mark-pos*`, `mark-sep*`, `save-sep`, `wrap-opt`, `wrap-ans*`, `show-ans` and `show-pos` are available for this environment.

6.5.2 The command \anspic

```
\anspic \anspic{\langle drawing or tabular \rangle}  
\anspic*[\langle content \rangle]{\langle drawing or tabular \rangle}
```

The `\anspic` command take three arguments, the *starred argument* “`*`” store the current `\label` next to the *optional argument* `\content` in *sequence* and *prop list* `{\langle store name \rangle}` set by `save-ans` key.

The *starred argument* “`*`” cannot be separated by spaces “`␣`” from the command, i.e. `\anspic*` and the *optional argument* does “*NOT*” support *verbatim content*. By design it is assumed that the *starred argument* “`*`” will only appear “*once*” within the environment.

Example

```
\begin{enumext}[save-ans=test,show-ans=true,nosep]
  \item Question with images and labels below.

  \begin{keyanspic}[layout-sty={3,2}]
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic{\includegraphics[scale=0.15]{example-image-b}}
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
  \end{keyanspic}

  \item Question with images and labels above.

  \begin{keyanspic}[label-pos=above, layout-sty={3,2},layout-sep=0.25cm]
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic{\includegraphics[scale=0.15]{example-image-b}}
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
  \end{keyanspic}

  \item Question with images and labels below on a single line.

  \begin{keyanspic}
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic{\includegraphics[scale=0.15]{example-image-b}}
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
  \end{keyanspic}
\end{enumext}
```

Remember to pass the `alt={description}` key to the `\includegraphics` command when creating a tagged PDF.

6.6 Printing stored content

6.6.1 The command `\getkeyans`

```
\getkeyans <store name> <position>
```

The command `\getkeyans` prints the “*stored content*” in *prop list* `{<store name>}` defined by `save-ans` key in the `<position>` returned by the `show-pos` key.

The “*stored content*” can only be accessed *after* it is stored, if `{<store name>}` does not exist the command will return an error.

The form taken by the argument `{<store name> <position>}` is the same as that used to generate the “*internal label and ref*” system when `save-ref` key are active, so to refer to a “*stored content*”. For example `\getkeyans{test:4}` will return the “*stored content*” at position 4 of the environment in which the key `save-ans=test` was set.

6.6.2 The command `\foreachkeyans`

```
\foreachkeyans [key = val] {<store name>}
```

The command `\foreachkeyans` goes through and executes the command `\getkeyans` on the contents in *prop list* `{<store name>}`. If you pass without options run `\getkeyans` on all contents in *prop list* `{<store name>}`.

Options for command

`sep = {<code>}` default: { }

Establishes the *separation* between “*each*” `{<content>}` stored in *prop list* `{<store name>}`. For example, you can use `sep={\ [10pt]}` for vertical separation of stored contents.

`step = {<integer>}` default: 1

Sets the *step* (increment) applied to the value set by key `start` for “*each*” `{<content>}` stored in *prop list* `{<store name>}`. The value must be a *positive integer*.

`start = {<integer>}` default: 1

Sets the *position* of the *prop list* `{<store name>}` from which execution will start. The value must be a *positive integer*.

`stop = {<integer>}` default: 0

Sets the *position* of the *prop list* `{<store name>}` from which execution will finish. The value must be a *positive integer*.

`before = {<code>}` default: empty

Sets the `{<code>}` that will be executed *before* each `{<content>}` stored in *prop list* `{<store name>}`. The `{<code>}` must be passed between braces.

`after = {<code>}` default: empty

Sets the `{<code>}` that will be executed *after* each `{<content>}` stored in *prop list* `{<store name>}`. The `{<code>}` must be passed between braces.

`wrapper = {<code> {#1} more code}` default: empty

Wraps the `{<content>}` stored in *prop list* `{<store name>}` referenced by `{#1}`. The `{<code>}` must be passed between braces. For example `\foreachkeyans[wrapper={\makebox[1em][l]{#1}}]{<store name>}`.

6.6.3 The command `\printkeyans`

```
\printkeyans {<store name>}
\printkeyans [<keys>] {<store name>}
\printkeyans* [<keys>] {<store name>}
```

The command `\printkeyans` prints “*all stored content*” in *sequence* `{<store name>}` defined by `save-ans` key placing this inside the `enumext` or `enumext*` environment if the *starred argument* ‘`*`’ is used.

The “*stored content*” can only be accessed *after* it is stored in the *sequence*, if `{<store name>}` does not exist the command will return an error.

The *optional argument* allows managing the `<keys>` in the “*first level*” of the environment in which the “*stored content*” of the *sequence* `{<store name>}` will be printed, if the *starred argument* ‘`*`’ is used it will be `enumext*` otherwise `enumext`.

The default values for the “*first level*” are the same as the default values for the `enumext` and `enumext*` environments along with the keys `nosep`, `first=\small`, `font=\small` and `columns=2`. For the inner levels of the environment `enumext` saved in the *sequence* `{<store name>}` the default values are the same as those established for the second, third and fourth levels plus the keys `nosep`, `first=\small`, `font=\small`. If the environment `enumext*` is saved within the *sequence* `{<store name>}` it will have the same default values plus the keys `nosep`, `first=\small`, `font=\small`.

Since the command encapsulates by default the `enumext` environment or the `enumext*` environment, we must take some considerations:

- If we execute `\printkeyans*{⟨store name⟩}` and the *sequence* $\{⟨store name⟩\}$ already contains any `enumext*` environment an error will be returned as we cannot nest.
- If we execute `\printkeyans*{⟨store name⟩}` and the *sequence* $\{⟨store name⟩\}$ contains any `enumext` environments, they will start with the $\langle keys \rangle$ set for the first level unless they are set in the *optional argument* or `save-key` is used to modify it.
- If we execute `\printkeyans{⟨store name⟩}` and the *sequence* $\{⟨store name⟩\}$ contains any environment `enumext*`, they will start with the $\langle keys \rangle$ set by default unless they are set in the *optional argument* or `save-key` is used to modify it.

The default values for the “first level” of `\printkeyans` commands and `\printkeyans*` are established using `\setenumext[⟨print , 1⟩]{⟨keys⟩}` and `\setenumext[⟨print*⟩]{⟨keys⟩}`.
If we need to set the $\langle keys \rangle$ for the environment `enumext` “saved” in the *sequence* $\{⟨store name⟩\}$ we will use `\setenumext[⟨print , level⟩]{⟨keys⟩}` and if we need to set the $\langle keys \rangle$ for the environment `enumext*` “saved” in the *sequence* $\{⟨store name⟩\}$ we will use `\setenumext[⟨print , *⟩]{⟨keys⟩}`.

Example

```
\begin{enumext}[save-ans=sample,columns=1,show-pos=true,nosep,save-ref=true]
  \item Factor  $3x+3y+3z$ . \anskey{ $3(x+y+z)$ }
  \item True False

  \begin{enumext}[nosep]
    \item \LaTeXe\ is cool? \anskey{Very True!}
  \end{enumext}

  \item Related to Linux

  \begin{enumext}[nosep]
    \item You use linux? \anskey{Yes}
    \item Rate the following package and class
      \begin{enumext}[nosep]
        \item \texttt{xsim} \anskey{very good}
        \item \texttt{exsheets} \anskey{obsolete}
      \end{enumext}
    \end{enumext}
  \end{enumext}

  The answer to \ref{sample:4} is \getkeyans{sample:4} and the answers to
  all the worksheets are as follows:

  \printkeyans{sample}
```

1. Factor $3x + 3y + 3z$.
[1]

2. True False
(a) ~~ETX~~e is cool?
[2]

3. Related to Linux
(a) You use linux?
[3]
(b) Rate the following package and class
i. `xsim`
[4]
ii. `exsheets`
[5]

The answer to 3.(b).i is very good and the answers to all the worksheets are as follows:

1. $3(x + y + z)$ ✖
2. (a) Very True! ✖
3. (a) Yes ✖
- (b) i. very good ✖
- ii. obsolete ✖

7 Full examples

Here I will leave as an example some adaptations questions taken from [TeX-SX](#). The examples are attached to this documentation and can be extracted from your PDF viewer or from the command line by running:

```
$ pdftdetach -saveall enumext.pdf
```

and then you can use the excellent [arara](#)¹ tool to compile them.

Example 1

Adapted from the response given by Enrico Gregorio in [Squares for answer choice options and perfect alignment to mathematical answers](#) .

8 Tagged PDF examples

This section is just to show the compatibility of [enumext](#) with *tagged* PDF using *lualatex*. The attached files here are just for testing and are intended as examples and, in a way, to simplify the time of Matthew Bertucci (@mbertucci) when he sees this excellent package and adds it to [The LaTeX Tagged PDF repository](#). To compile the tests with *lualatex-dev* the packages [multicol](#), [unicode-math](#), [geometry](#), [graphicx](#), [luamml](#) and [hyperref](#) are required along with the line:

```
\DocumentMetadata
{
  lang = en-US, pdfversion = 2.0, pdfstandard = ua-2, tagging=on,
}
```

- ◆ All examples have been checked using [veraPDF](#) together with [ngpdf](#).
 - The file `enumext-01.tex` contains the basic tests for the [enumext](#) and [enumext*](#) environments and the nesting between them plus the use of the `label`, `labelwidth`, `labelsep`, `ref`, `align` and `wrap-label` keys. Source file  and *tagged* PDF .
 - The file `enumext-02.tex` contains the tests for the [enumext](#) and [enumext*](#) environments and the support for [minipage](#) and [multicols](#) environments using the keys `columns`, `columns-sep`, `mini-env`, `mini-right` and `\miniright` command. Source file  and *tagged* PDF .
 - The file `enumext-03.tex` contains the tests for the [enumext](#) and [keyanspic](#) environments activated by the `save-ans` key together with the `save-sep` and `save-ref` keys and the `\printkeyans` command. Source file  and *tagged* PDF .

- The file `enumext-04.tex` contains the tests for the `\anskey` command and the `anskey*` environment activated by the `save-ans` key along with the `\getkeyans` and `\printkeyans` commands. Source file  and tagged PDF .
- The file `enumext-05.tex` contains the tests for the environments `keyans`, `keyans*` and `keyanspic` activated by the key `save-ans` together with the keys `no-store` and `show-ans` and the commands `\setenumext`, `\setenumextmeta`, `\printkeyans` and `\foreachkeyans`. Source file  and tagged PDF .
- The file `enumext-06.tex` contains the tests for the environments `enumext` and `enumext*` for *fake itemize* and *description*. Source file  and tagged PDF .

9 The way of non-enumerated lists

It is possible to use (or abuse) the `enumext` and `enumext*` environments to mimic *non-enumerated* list environments such as `itemize` and `description`, clearly the `\keys` to “store answers”, the `keyans`, `keyans*` and `keyanspic` environments lose their sense and it is not the focus of `enumext` package, but, why not to do it?.

Here I leave as an example other uses of the `enumext` environment that can be helpful for specific purposes. The *trick* to generate these “fake environments” is set `label={}` or `label={\some}` and play with the `list-indent`, `list-offset`, `font` and `wrap-label` keys.

Fake itemize environment

Here we set the `label` key using the default settings in \TeX for the four levels `\textbullet`, `\textendash`, `\textasteriskcentered` and `\textperiodcentered` together with the `nosep` key to reduce the vertical spaces in the left side example and set the `label` key in *mathematical mode* for the right side as `\ast`, `\diamond`, `\circ` and `\star` for the four levels together with the `nosep` key

- | | |
|---------------------|---------------------|
| • First level item | * First level item |
| – Second level item | ◇ Second level item |
| • Third level item | ◦ Third level item |
| · Fourth level item | ★ Fourth level item |
| • First level item | * First level item |

Fake description environment

Here we set `label={}` and `list-indent=2.5em`, `font=\bfseries`.

SomeThing A short one-line description.

This is an entry *without* a label.

Something A short *one-line* description text.

Something long A much *longer* description text may take more than one line or more than one paragraph.

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

If we add `list-indent=0pt` you get *widest style*:

SomeThing A short one-line description.

This is an entry *without* a label.

Something A short *one-line* description text.

Something long A much *longer* description text may take more than one line or more than one paragraph.

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

- The small space at the beginning of the “unlabeled entry” corresponds to `\labelsep` and can be removed using `\hspace{-\labelsep}` at the beginning of the line.

- When tagged PDF is active the default `description` style is NOT available due to the redefinition of `\makeLabel` for the `align` key which uses `\makebox` in this case, meaning that `\item[\content]` will not extend beyond `\labelwidth` which causes overlaps,

Description indented by label

Here we set `label={}` and we will give a convenient value to `labelsep` and `labelwidth`, for example we can take as reference our *longest label* and pass it as value using:

```
\newlength{\descitemwd}
\settowidth{\descitemwd}{\textbf{Something long}}
```

and then use `labelsep=4pt`, `labelwidth=\descitemwd`, `font=\bfseries`.

SomeThing A short one-line description.

This is an entry *without* a label.

Something A short one-line description.

Something long A much longer description. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

The environment can be translated so that the `<labels>` are on the left margin calculating the value passed to the `list-offset` key, in this case it will be equal to the sum of the values set by the `labelwidth` and `labelsep` keys finally resulting as `list-offset={-\descitemwd - 4pt}`.

Something	A short one-line description. This is an entry <i>without</i> a label.
Something	A short one-line description.
Something long	A much longer description. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. If we add <code>align=right</code> it will look like this:

Something	A short one-line description. This is an entry <i>without</i> a label.
Something	A short one-line description.
Something long	A much longer description. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

At this point we have used `list-offset={-\descitemwd - 4pt}` instead of `list-offset={-\labelwidth - \labelsep}`, this is because the parameters `\labelwidth` and `\labelsep` take the default values, as if we had not set `label`.

Description with multi-line labels

The `label` key does not accept *multiline material*, this is where the `wrap-label` and `wrap-label*` keys comes into play. Unlike the `enumitem` package, the `align` key only supports three options, so what we will do is create a command in the style `\parleft` of `enumitem` that allows us to place *multiline labels* using `\parbox`.

```
\NewDocumentCommand \labelbx { s +m }
{%
  \SuspendTagging{\parbox}%
  \IfBooleanTF{#1}
  {\strut\smash{\parbox[t]{\labelwidth}{\raggedright{#2}}}}%
  {\strut\smash{\parbox[t]{\labelwidth}{\raggedleft{#2}}}}%
  \ResumeTagging{\parbox}%
}
```

Now we just need to set `wrap-label*={\labelbx{#1}}`.

Something	A short one-line description. This is an entry <i>without</i> a label.
Something	A short one-line description.
Something long	A much longer description. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.
SoMeThInG	A much longer description. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum
LoNg	ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

Final notes

The original implementation (if you can call it that) of the ideas that led to the creation of `enumext` were some macros using the `enumerate[5]` package for personal use created in early 2003, the code was quite questionable, but functional for these simple requirements.

With the great answers given by Christian Hupfer in [Create a fake label ref using list](#) and the answer given by David Carlisle in [Change the use of label ref by data save in an array \(list\)](#) I managed to create a more solid code than the original version, now using the `l3prop[11]` and `l3seq[11]` modules together with the `hyperref[8]` and `enumitem[6]` packages, which did the job, but with some limitations.

As time went by I took these limitations as a personal challenge which I called “*reinventing the wheel*”, since there were packages and classes that did more or less what I was looking for, but did not fit my simple requirements. This “*reinventing the wheel*” finally ended up becoming `enumext`.

Why list environments?

The answer is simple, first I love the beauty of its syntax and many of what I had already written used the `enumerate` environment or lists created using the `enumitem` package. In my mind I thought: how complicated could it be to write a package that looked like `enumitem`? It seemed simple enough, of course I didn’t have in mind the mess I was getting into working with `list` environments, `minipage` and adding support for the `multicol` and `hyperref` packages.

Of course, seeing the final result of the experiment “*reinventing the wheel*” I am quite satisfied.

Why not random questions and other utilities

The “*random*” type questions I love and hate them at the same time, although they simplify a lot the work when creating a multiple choice test, but you lose the beauty of typesetting a document with \LaTeX , that is to say the output does not always look as nice as it should, even if they are only alternatives these must follow a certain order when presented either numerical or presentation, that said handling that using *nested lists* is quite complicated so I do not classify to be implemented.

Why has it taken so long?

One of the setbacks, beyond my laziness, was including compatibility with *tagged* PDF. To be honest, it’s something I never considered at any point, but I firmly believe that being able to create *accessible documents* provides a great opportunity in the world of mathematics education. From my perspective as a *high school* teacher, beyond theorems and deep mathematics, the use of exercise lists is one of the most common things. Being able to open the way to work in parallel with those who have different abilities is really important and I regret not having looked into this in the past. I hope that `enumext` serves this purpose and inspires more users and authors to follow this path.

11 Change history

- v1.6 (ctan), 2025-06-21**
 - The `resume`, `resume*` and `series` keys can now be set per level.
 - Fixed bad interaction between `\printkeyans` and the `resume`, `resume*` keys.
- v1.5 (ctan), 2025-06-11**
 - Replacing `\regex_match:` (deprecated) with `\regex_if_match:`.
 - Add keys `beginpenalty`, `midpenalty` and `endpenalty`.
- v1.4 (ctan), 2025-06-09**
 - Improved implementation of the `start` key for *tagged* PDF.
 - Improved implementation of the `ref` key.
 - Fixed the behavior of the `save-sep` key.
 - Fixed the behavior of the `resume*` key.
- v1.3 (ctan), 2025-06-01**
 - Removed dependency on the `scontents` package.
 - The `anskey*` environment has been rewritten using the new `c`-type argument.
- v1.2 (ctan), 2025-03-28**
 - Replace signature (prevent expansion for optional argument).
 - Solve Inconsistent local/global assignment.
- v1.1 (ctan), 2024-11-14**
 - Fixed implementation for `font` and `base-fix` keys.
 - Added new keys for symbol marks.
 - Update and improvements in the internal code.
 - Adjustments in the documentation.
- v1.0 (ctan), 2024-11-01**
 - First public release.

12 Index of Documentation

13 Implementation

The most recent publicly released version of `enumext` is available at CTAN: <https://www.ctan.org/pkg/enumext>. While general feedback via email is welcomed, specific bugs or feature requests should be reported through the issue tracker: <https://github.com/pablgonz/enumext/issues>.

- The documentation presented here is far from professional, it contains a lot of obvious information that to the eye of a TeXpert are superfluous, but, after so many years developing this project is the only way to remember what does what.

13.1 General conventions

Variables containing `i`, `ii`, `iii` and `iv` are associated by level with the `enumext` environment, variables containing `v` are associated with the `keyans` environment, variables containing `vi` are associated with the `keyanspic` environment, variables containing `vii` are associated with the `enumext*` environment and variables containing `viii` are associated with the `keyans*` environment.

To simplify writing and documentation some variables and functions that are common to the different levels of the environments are described using a capital “X”.

The temporary function `__enumext_tmp:n` is used in different parts of the package code for variable creation or execution of other functions that are grouped into this one.

All variables and functions defined in this package are private and are NOT intended to work or be used by another package or module.

13.2 Initial set up

Start the DocStrip guards.

```
1 (*package)
```

Identify the internal prefix (L^AT_EX3 DocStrip convention) for l3doc class.

```
2 (@@=enumext)
```

13.3 Declaration of the package

First we will make sure we have a minimum (super updated) version of L^AT_EX to work correctly.

```
3 \NeedsTeXFormat{LaTeX2e}[2025-06-01]
```

Now declare the `enumext` package.

```
4 \ProvidesExplPackage {enumext} {2025-06-21} {1.6} {Enumerate exercise sheets}
```

Finally check if the `multicol` package are loaded, if not we load it.

```
5 \hook_gput_code:nnn {begindocument} {enumext}
6 {
7   \IfPackageLoadedTF { multicol }
8   {
9     \msg_info:nnn { enumext } { package-load } { multicol }
10  }
11  {
12    \msg_info:nnn { enumext } { package-not-load } { multicol }
13    \RequirePackage{multicol}[2025-05-25]
14  }
15 }
```

13.4 Definition of variables

Variables that do not appear in this section are created by means of `\keys_define:nn` or some function described below.

Integer variables will control the nesting levels of the environments, `anskey*` environment and `\anskey` command.

```
\__enumext_level_int
\__enumext_level_h_int
\__enumext_anskey_level_int
\__enumext_keyans_level_int
\__enumext_keyans_level_h_int
\__enumext_keyans_pic_level_int

16 \int_new:N \__enumext_level_int
17 \int_new:N \__enumext_level_h_int
18 \int_new:N \__enumext_anskey_level_int
19 \int_new:N \__enumext_keyans_level_int
20 \int_new:N \__enumext_keyans_level_h_int
21 \int_new:N \__enumext_keyans_pic_level_int
```

(End of definition for `__enumext_level_int` and others.)

```

\l__enumext_starred_bool
\g__enumext_starred_bool
  \l_enumext_starred_first_bool
\l__enumext_standar_bool
\g__enumext_standar_bool
  \l_enumext_standar_first_bool
\l__enumext_keyans_env_bool
\g__enumext_start_line_tl
\g__enumext_envir_name_tl
\l__enumext_envir_name_tl

```

Internal variables used by functions `__enumext_is_not_nested:`, `__enumext_is_on_first_level:` and `__enumext_keyans_name_and_start:` (§13.5.1).

```

22 \bool_new:N \l__enumext_starred_bool
23 \bool_new:N \g__enumext_starred_bool
24 \bool_new:N \l__enumext_starred_first_bool
25 \bool_new:N \l__enumext_standar_bool
26 \bool_new:N \g__enumext_standar_bool
27 \bool_new:N \l__enumext_standar_first_bool
28 \bool_new:N \l__enumext_keyans_env_bool
29 \tl_new:N \g__enumext_start_line_tl
30 \tl_new:N \g__enumext_envir_name_tl
31 \tl_new:N \l__enumext_envir_name_tl

```

(End of definition for `\l__enumext_starred_bool` and others.)

```

\l__enumext_counter_i_tl
\l__enumext_counter_ii_tl
\l__enumext_counter_iii_tl
\l__enumext_counter_iv_tl
\l__enumext_counter_v_tl
\l__enumext_counter_vi_tl
\l__enumext_counter_vii_tl
\l__enumext_counter_viii_tl

```

Variables to store the “*name of the counters*” `enumXi`, `enumXii`, `enumXiii` and `enumXiv` for `enumext` environment, `enumXv` for `keyans` environment and `enumXvi` for the `keyanspic` environment. The counters `enumXvii` and `enumXviii` are used by `enumext*` and `keyans*` environments.

The initial values of these variables are set by the function `__enumext_define_counter:Nn` (§13.11) and then modified by the function `__enumext_label_style:Nnn` used by `label` key (§13.14).

```

32 \cs_set_protected:Npn \__enumext_tmp:n #1
33 {
34   \tl_new:c { l__enumext_counter_#1_tl }
35 }
36 \clist_map_inline:nn { i, ii, iii, iv, v, vi, vii, viii } { \__enumext_tmp:n {#1} }

```

(End of definition for `\l__enumext_counter_i_tl` and others.)

```

\l__enumext_ref_key_arg_tl
\l__enumext_ref_the_count_tl
\l__enumext_the_counter_X_tl
  \l__enumext_renew_counter_X_tl

```

Internal variables used by `ref` key (§13.14).

```

37 \tl_new:N \l__enumext_ref_key_arg_tl
38 \tl_new:N \l__enumext_ref_the_count_tl
39 \cs_set_protected:Npn \__enumext_tmp:n #1
40 {
41   \tl_new:c { l__enumext_renew_counter_#1_tl }
42   \tl_new:c { l__enumext_the_counter_#1_tl }
43   \tl_set:ce { l__enumext_the_counter_#1_tl } { \exp_not:c { theenumX#1 } }
44 }
45 \clist_map_inline:nn { i, ii, iii, iv, v, vi, vii, viii } { \__enumext_tmp:n {#1} }

```

(End of definition for `\l__enumext_ref_key_arg_tl` and others.)

```

\l__enumext_series_name_tl
\l__enumext_resume_X_bool
\g__enumext_resume_X_int
  \g__enumext_not_key_series_X_tl
\g__enumext_series_name_X_tl

```

Internal variables used by `resume`, `resume*` and `series` keys (§13.26).

```

46 \tl_new:N \l__enumext_series_name_tl
47 \cs_set_protected:Npn \__enumext_tmp:n #1
48 {
49   \bool_new:c { l__enumext_resume_#1_bool }
50   \int_new:c { g__enumext_resume_#1_int }
51   \tl_new:c { g__enumext_not_key_series_#1_tl }
52   \tl_new:c { l__enumext_series_name_#1_tl }
53 }
54 \clist_map_inline:nn { i, ii, iii, iv, vii } { \__enumext_tmp:n {#1} }

```

(End of definition for `\l__enumext_series_name_tl` and others.)

```

\l__enumext_current_widest_dim
\g__enumext_counter_styles_tl
\g__enumext_widest_label_tl
  \l__enumext_label_width_by_box

```

The variable `\l__enumext_current_widest_dim` stores the current label width, the variable `\g__enumext_counter_styles_tl` stores the default *label style* and the variable `\g__enumext_widest_label_tl` the label width. These variables are used by `widest` (§13.15) and `label` (§13.13) keys.

```

55 \dim_new:N \l__enumext_current_widest_dim
56 \tl_new:N \g__enumext_counter_styles_tl
57 \tl_new:N \g__enumext_widest_label_tl
58 \box_new:N \l__enumext_label_width_by_box

```

(End of definition for `\l__enumext_current_widest_dim` and others.)

```
\l__enumext_leftmargin_tmp_X_bool
\l__enumext_leftmargin_tmp_X_dim
\l__enumext_leftmargin_X_dim
\l__enumext_itemindent_X_dim
```

The boolean variable `\l__enumext_leftmargin_tmp_X_bool` and the dimensional variable `\l__enumext_leftmargin_tmp_X_dim` are used by the `list-indent` key (§13.19). The variables `\l__enumext_leftmargin_X_dim` and `\l__enumext_itemindent_X_dim` are used and set by the function `__enumext_calc_hspace:NNNNNNNNNN` (§13.39.1).

```
59 \cs_set_protected:Npn \__enumext_tmp:n #1
60 {
61   \bool_new:c { \l__enumext_leftmargin_tmp_#1_bool }
62   \dim_new:c { \l__enumext_leftmargin_tmp_#1_dim }
63   \dim_new:c { \l__enumext_leftmargin_#1_dim }
64   \dim_new:c { \l__enumext_itemindent_#1_dim }
65 }
66 \clist_map_inline:nn { i, ii, iii, iv, v, vi, vii, viii } { \__enumext_tmp:n {#1} }
```

(End of definition for `\l__enumext_leftmargin_tmp_X_bool` and others.)

```
\l__enumext_multicols_above_X_skip
\l__enumext_multicols_below_X_skip
\g__enumext_multicols_right_X_skip
\l__enumext_align_label_pos_X_str
```

Internal variables used by `columns` key (§13.23) and `align` key (§13.13).

```
67 \cs_set_protected:Npn \__enumext_tmp:n #1
68 {
69   \skip_new:c { \l__enumext_multicols_above_#1_skip }
70   \skip_new:c { \l__enumext_multicols_below_#1_skip }
71   \skip_new:c { \g__enumext_multicols_right_#1_skip }
72   \str_new:c { \l__enumext_align_label_pos_#1_str }
73 }
74 \clist_map_inline:nn { i, ii, iii, iv, v } { \__enumext_tmp:n {#1} }
```

(End of definition for `\l__enumext_multicols_above_X_skip` and others.)

```
\g__enumext_minipage_stat_int
\l__enumext_minipage_temp_skip
\l__enumext_minipage_left_skip
\l__enumext_minipage_right_skip
\l__enumext_minipage_after_skip
\g__enumext_minipage_right_skip
\g__enumext_minipage_after_skip
\l__enumext_minipage_left_X_dim
\l__enumext_minipage_active_X_bool
```

Internal variables used by `\miniright` command (§13.24.4) and the keys `mini-right`, `mini-right*`, `mini-env` and `mini-sep` (§13.22, §13.24).

```
75 \int_new:N \g__enumext_minipage_stat_int
76 \skip_new:N \l__enumext_minipage_temp_skip
77 \skip_new:N \l__enumext_minipage_left_skip
78 \skip_new:N \l__enumext_minipage_right_skip
79 \skip_new:N \l__enumext_minipage_after_skip
80 \skip_new:N \g__enumext_minipage_right_skip
81 \skip_new:N \g__enumext_minipage_after_skip
82 \cs_set_protected:Npn \__enumext_tmp:n #1
83 {
84   \dim_new:c { \l__enumext_minipage_left_#1_dim }
85   \bool_new:c { \l__enumext_minipage_active_#1_bool }
86 }
87 \clist_map_inline:nn { i, ii, iii, iv, v, vii, viii } { \__enumext_tmp:n {#1} }
```

(End of definition for `\g__enumext_minipage_stat_int` and others.)

```
\l__enumext_wrap_label_X_bool
\l__enumext_wrap_label_opt_X_bool
\l__enumext_start_X_int
\l__enumext_fake_item_indent_X_tl
\l__enumext_label_fill_left_X_tl
\l__enumext_label_fill_right_X_tl
\l__enumext_vspace_a_star_X_bool
\l__enumext_vspace_b_star_X_bool
```

The bool vars `\l__enumext_wrap_label_X_bool` and `\l__enumext_wrap_label_opt_X_bool` are used by `wrap-label` and `wrap-label*` keys (§13.13), the integer `\l__enumext_start_X_int` are used by the `start` and `start*` keys (§13.15), the token list `\l__enumext_fake_item_indent_X_tl` is used by `itemindent` key (§13.19.1), the variables `\l__enumext_label_fill_left_X_tl` and `\l__enumext_label_fill_right_X_tl` are used by the `align` key (§13.13). The boolean vars `\l__enumext_vspace_a_star_X_bool`, `\l__enumext_vspace_b_star_X_bool` are used by `above`, `above*`, `below` and `below*` keys (§13.21).

```
88 \cs_set_protected:Npn \__enumext_tmp:n #1
89 {
90   \bool_new:c { \l__enumext_wrap_label_#1_bool }
91   \bool_new:c { \l__enumext_wrap_label_opt_#1_bool }

```

\l__enumext_store_active_bool
\l__enumext_store_name_tl
\g__enumext_store_name_tl
\l__enumext_store_current_label_tl
\l__enumext_store_current_opt_arg_tl

```

The variable `\l__enumext_store_active_bool` setting by `save-ans` key (§13.27.1) activates all the mechanism related to `\anskey`, `anskey*`, `keyans`, `keyans*` and `keyanspic` environments.

The variable `\l__enumext_store_name_tl` saves the $\{\langle store\ name\rangle\}$ set by the `save-ans` key of the *sequence* and *prop list* in which we will store, the variable `\g__enumext_store_name_tl` it's just a global copy of $\{\langle store\ name\rangle\}$ used by different functions.

The variables `\l__enumext_store_current_label_tl` and `\l__enumext_store_current_opt_arg_tl` save the *current label* and *optional argument* of `\item*` (§13.38) and `\anspic*` (§13.43.2) for the `keyans`, `keyans*` and `keyanspic` environments.

```

100 \bool_new:N \l__enumext_store_active_bool
101 \tl_new:N \l__enumext_store_name_tl
102 \tl_new:N \g__enumext_store_name_tl

13.5 Some utility functions

```

\keys_precompile:neN
\seq_use:NV

```

Non-standard kernel variants used by the `\printkeyans` command (§13.48) and `\foreachkeyans` command (§13.51).

```

200 \cs_generate_variant:Nn \keys_precompile:nnN { neN }
201 \cs_generate_variant:Nn \seq_use:Nn { NV }

```

(End of definition for `\keys_precompile:neN` and `\seq_use:NV`.)

```
\__enumext_scan_tokens:n
```

The functions `\tl_rescan:nn` and `\tl_set_rescan:Nnn` provided by `expl3` doesn't fit the needs of this package because it does not allow catcode changes inside the argument, so verbatim stuff used inside one of `anskey*` environment will not work. Here we create a private copy of `\tex_scantokens:D` which will serve our purposes. See the answer by Ulrich Diez in [How do use {<setup> in \tl_set_rescan:Nnn to replace \scantokens?](#).

```
202 \cs_new_protected:Npn \__enumext_scan_tokens:n #1 { \tex_scantokens:D {#1} }
```

(End of definition for `__enumext_scan_tokens:n`.)

```
\__enumext_at_begin_document:n
```

A internal “hook” function used for copying plain `list` and `minipage` environments definition and `hyperref` detection.

```

203 \cs_new_protected:Npn \__enumext_at_begin_document:n #1
204 {
205   \hook_gput_code:nnn {begindocument} {enumext} { #1 }
206 }

```

(End of definition for `__enumext_at_begin_document:n`.)

```

\__enumext_after_env:nn
\__enumext_before_env:nn

```

A internal “hook” functions for execute code `mini-right` and `mini-right*` keys outside the `enumext*` and `keyans*` environments and print check-ans outside the `enumext` and `enumext*` environments.

```

207 \cs_new_protected:Npn \__enumext_after_env:nn #1 #2
208 {
209   \hook_gput_code:nnn {env/#1/after} {enumext} {#2}
210 }
211 \cs_new_protected:Npn \__enumext_before_env:nn #1 #2
212 {
213   \hook_gput_code:nnn {env/#1/before} {enumext} {#2}
214 }

```

(End of definition for `__enumext_after_env:n` and `__enumext_before_env:n`.)

`__enumext_level:` Function for check current level in `enumext`.

```
215 \cs_new:Nn \__enumext_level:
216 {
217   \int_to_roman:n { \__enumext_level_int }
218 }
```

(End of definition for `__enumext_level:`.)

`__enumext_if_is_int:nT` A conditional function to know if the variable we are passing is an integer used by `start` and `widest` keys.
`__enumext_if_is_int:nF` This function is taken directly from the answer given by Henri Menke in [How to test if an expl3 function argument is an integer expression?](#).
`__enumext_if_is_int:nTF`

```
219 \prg_new_protected_conditional:Npnn \__enumext_if_is_int:n #1 { T, F, TF }
220 {
221   \regex_if_match:nnTF { ^[\+|-]?[\d]+$ } {#1} % $
222   { \prg_return_true: }
223   { \prg_return_false: }
224 }
```

(End of definition for `__enumext_if_is_int:nT`, `__enumext_if_is_int:nF`, and `__enumext_if_is_int:nTF`.)

`__enumext_show_length:nnn` Internal function used by `show-length` key to show “all lengths” calculated and use in `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```
225 \cs_new:Npn \__enumext_show_length:nnn #1 #2 #3
226 {
227   *~#2
228   \prg_replicate:nn { 14 - \str_count:n {#2} } {~}
229   =~\use:c { #1_use:c } { \__enumext_#2_#3_#1 } \\
230 }
```

(End of definition for `__enumext_show_length:nnn`.)

`__enumext_unskip_unkern:` The function `__enumext_unskip_unkern:` will remove the last `⟨skip⟩` or `⟨kern⟩` at execution time using the values `11` and `12` of `\lastnodetype` to apply `\unskip` or `\unkern` according to the case.

```
231 \cs_new_protected:Nn \__enumext_unskip_unkern:
232 {
233   \int_case:nnT { \lastnodetype }
234   {
235     { 11 }{ \unskip }
236     { 12 }{ \unkern }
237   }
238 }
```

(End of definition for `__enumext_unskip_unkern:`.)

13.5.1 Utilities for environments and levels

`__enumext_is_not_nested:` The function `__enumext_is_not_nested:` set the variables `\g__enumext_standar_bool` and `\g__enumext_starred_bool` to “true” only if the environments `enumext` and `enumext*` are NOT nested in each other and save the environment name in `\l__enumext_envir_name_tl`.
`__enumext_is_on_first_level:`

```
239 \cs_new_protected:Nn \__enumext_is_not_nested:
240 {
241   \str_case:en { \@currenvir }
242   {
243     {enumext}
244     {
245       \tl_set:Nn \l__enumext_envir_name_tl { enumext }
246       \bool_lazy_and:nnT
247       { \bool_not_p:n { \g__enumext_standar_bool } }
248       { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
249       {
250         \bool_gset_true:N \g__enumext_standar_bool
251       }
252     }
253     {enumext*}
254     {
255       \tl_set:Nn \l__enumext_envir_name_tl { enumext* }
256       \bool_lazy_and:nnT
257       { \bool_not_p:n { \g__enumext_starred_bool } }
258       { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
```

```

259         {
260             \bool_gset_true:N \g__enumext_starred_bool
261         }
262     }
263 }
264 }

```

The function `__enumext_is_on_first_level:` will set the variables `\l__enumext_standar_first_bool` (§13.27.1), `\l__enumext_starred_first_bool` (§13.27.1) to “true” only if the environment is not nested and we are in the “first level” of it. We will also save the *start line number* of each environment in the variable `\g__enumext_start_line_tl` and the *name* of each environment in the variable `\g__enumext_envir_name_tl` to use in messages related to the `check-ans` key and `.log` file.

```

265 \cs_new_protected:Nn \__enumext_is_on_first_level:
266 {
267     \bool_lazy_all:nT

341     \bool_gset_false:N \g__enumext_standar_bool
342     \bool_gset_false:N \g__enumext_starred_bool
343 }
344 \cs_new_protected:Nn \__enumext_reset_global_tl:
345 {
346     \tl_gclear:N \g__enumext_store_name_tl
347     \tl_gclear:N \g__enumext_start_line_tl
348     \tl_gclear:N \g__enumext_envir_name_tl
349 }

```

(End of definition for `__enumext_reset_global_vars:` and others.)

The function `__enumext_log_global_vars:` will be passed to the function `__enumext_execute_after_env:` and write to the `.log` file the number of elements saved in the *prop list* and *sequence* created by the `save-ans` key along with the value of the integer variable created for the `resume` key.

```

350 \cs_new_protected:Nn \__enumext_log_global_vars:
351 {
352     \msg_log:nneeee { enumext } { prop-seq-int-hook }
353     { \g__enumext_store_name_tl }
354     { \prop_count:c { g__enumext_ \g__enumext_store_name_tl _prop } }
355     { \seq_count:c { g__enumext_ \g__enumext_store_name_tl _seq } }
356     { \int_use:c { g__enumext_resume_ \g__enumext_store_name_tl _int } }
357 }

```

The function `__enumext_log_answer_vars:` will be passed to the function `__enumext_execute_after_env:` and write to the `.log` file the number of items and answers along with the difference between them.

```

358 \cs_new_protected:Nn \__enumext_log_answer_vars:
359 {
360     \msg_log:nneee { enumext } { item-answer-hook }
361     { \int_use:N \g__enumext_item_number_int }
362     { \int_use:N \g__enumext_item_anskey_int }
363     { \int_eval:n { \g__enumext_item_number_int - \g__enumext_item_anskey_int } }
364 }

```

(End of definition for `__enumext_log_global_vars:` and `__enumext_log_answer_vars:`)

13.6 Copying list and minipage environments

The `list` environment provided by \LaTeX has the following plain form:

```
\list{⟨arg one⟩}{⟨arg two⟩}
  \item[⟨opt⟩]
\endlist
```

And `minipage` environment provided by \LaTeX has the following (simplified) plain form:

```
\minipage[⟨pos⟩][⟨height⟩][⟨inner-pos⟩]{⟨width⟩}
  ⟨internal implement⟩
\endminipage
```

As a precaution we copy them using `__enumext_at_begin_document:n` in case any package redefines the `list` environment or a related command.

🔍 For compatibility with *tagged* PDF we should use `\NewCommandCopy` and not `\cs_new_eq:NN` for `\item`. When *tagged* PDF is active `\item` is redefined using `ltxcmd` (see `latex-lab-block`[19]).

```
\__enumext_start_list:nn
  \__enumext_stop_list:
  \__enumext_item_std:w
  \__enumext_minipage:w
  \__enumext_endminipage:
```

The functions `__enumext_start_list:nn` and `__enumext_stop_list:` correspond to copies of `\list` and `\endlist` from plain definition of `list` environment, the function `__enumext_item_std:w` is a copy of the `\item` command.

```
365 \__enumext_at_begin_document:n
366 {
367   \cs_new_eq:NN \__enumext_start_list:nn \list
368   \cs_new_eq:NN \__enumext_stop_list: \endlist
369   \NewCommandCopy \__enumext_item_std:w \item
370 }
```

The functions `__enumext_minipage:w` and `__enumext_endminipage:` correspond to copies of `\minipage` and `\endminipage` from plain definition of `minipage` environment.

```
371 \__enumext_at_begin_document:n
372 {
373   \cs_new_eq:NN \__enumext_minipage:w \minipage
374   \cs_new_eq:NN \__enumext_endminipage: \endminipage
375 }
```

(End of definition for `__enumext_start_list:nn` and others.)

13.7 Compatibility with hyperref and footnotehyper

First we define the necessary rules using “hooks” to determine if the `hyperref` package is loaded.

```
\__enumext_after_hyperref:
  \__enumext_hypertarget:nn
  \__enumext_phantomsection:
```

```
376 \hook_gput_code:nnn { begindocument } { enumext } { \__enumext_after_hyperref: }
377 \hook_gset_rule:nnnn { begindocument } { enumext } { after } { hyperref }
```

The function `__enumext_after_hyperref:` sets the state of the boolean variable `\l__enumext_hyperref_bool` to “true” if the package is loaded. At this point we will use the public macro `\IfHyperBoolean` to determine if the `hyperfootnotes=true` key is present, if so, we set the state of the boolean variable `\l__enumext_footnotes_key_bool` to “true”.

```
378 \cs_new_protected:Nn \__enumext_after_hyperref:
379 {
380   \IfPackageLoadedT { hyperref }
381   {
382     \msg_info:nnn { enumext } { package-load } { hyperref }
383     \bool_set_true:N \l__enumext_hyperref_bool
384     \IfHyperBoolean{hyperfootnotes}
385     {
386       \bool_set_true:N \l__enumext_footnotes_key_bool
387     }
388     { }
389   }
```

If the state of the variable `\l__enumext_footnotes_key_bool` is true we will check if the package `footnotehyper` is loaded, in case it is not present, we will set the value of `\l__enumext_footnotes_key_bool` to false and we will redefine `\footnote`.

```
390   \bool_if:NT \l__enumext_footnotes_key_bool
391   {
392     \IfPackageLoadedTF { footnotehyper }
393     {
394       \msg_info:nnn { enumext } { package-load } { footnotehyper }
395     }
396     {
397       \bool_set_false:N \l__enumext_footnotes_key_bool
```

```

398     }
399 }

```

The functions `__enumext_hypertarget:nn` and `__enumext_phantomsection:` correspond to the internal copies of `\hypertarget` and `\phantomsection`. If the boolean variable `\l__enumext_hyperref_bool` is false the functions `__enumext_hypertarget:nn` and `__enumext_phantomsection:` will be disabled.

```

400 \bool_if:NTF \l__enumext_hyperref_bool
401 {
402   \cs_new_eq:NN \__enumext_hypertarget:nn \hypertarget
403   \cs_new_eq:NN \__enumext_phantomsection: \phantomsection
404 }
405 {
406   \cs_new_eq:NN \__enumext_hypertarget:nn \use_none:nn
407   \cs_new_eq:NN \__enumext_phantomsection: \prg_do_nothing:
408 }
409 }

```

(End of definition for `__enumext_after_hyperref:`, `__enumext_hypertarget:nn`, and `__enumext_phantomsection:`)

`__enumext_newlabel:nn`

The function `__enumext_newlabel:nn` write the information to the `.aux` file when using the `save-ref` key. The arguments taken by the function are:

#1: `\l__enumext_newlabel_arg_one_tl`
 #2: `\l__enumext_newlabel_arg_two_tl`

🔗 The trick here is to manage the number of arguments passed to `\newlabel{#1}{#2}` according to the presence of the `hyperref` package.

```

410 \cs_new_protected:Npn \__enumext_newlabel:nn #1 #2
411 {
412   \protected@write \@auxout { }
413   {
414     \token_to_str:N \newlabel {#1}
415     {
416       {#2}
417       \bool_if:NT \l__enumext_hyperref_bool
418       { { \thepage } {#2} {#1} }
419       { }
420     }
421   }
422   \__enumext_hypertarget:nn {#1} { }
423   \__enumext_phantomsection:
424 }

```

(End of definition for `__enumext_newlabel:nn`.)

13.8 Internal redefining `\footnote` command

To keep the correct numbering of `\footnote` and to make it work correctly in the `enumext*` and `keyans*` environments and `mini-env` key it is necessary to redefine the `\footnote` command. This implementation is adapted from the answer given by Clea F. Rees (@cfr) in `footnotes in boxes compatible with hyperref`.

`__enumext_footnotetext:nn`
`__enumext_renew_footnote:`
`__enumext_print_footnote:`
`__enumext_renew_footnote_mini:`
`__enumext_print_footnote_mini:`

Redefinition of the `\footnote` command using `\footnotetext` and `\footnotemark` for the `mini-env` key in the `enumext` and `keyans` environments.

```

425 \cs_new_protected:Nn \__enumext_footnotetext:nn
426 {
427   \footnotetext[#1]{#2}
428 }
429 \cs_new_protected:Nn \__enumext_renew_footnote:
430 {
431   \RenewDocumentCommand \footnote { o +m }
432   {
433     \tl_if_novalue:nTF {##1}
434     {
435       \stepcounter{footnote}
436       \int_gset_eq:Nc \g__enumext_footnote_standar_int { c@footnote }
437     }
438     {
439       \int_gset:Nn \g__enumext_footnote_standar_int { ##1 }
440     }
441     \footnotemark [ \g__enumext_footnote_standar_int ]
442     \seq_gput_right:Nn \g__enumext_footnote_standar_arg_seq { ##2 }
443     \seq_gput_right:NV
444     \g__enumext_footnote_standar_int_seq \g__enumext_footnote_standar_int

```

```

445     }
446   }
447   \cs_new_protected:Nn \__enumext_print_footnote:
448   {
449     \seq_if_empty:NF \g__enumext_footnote_standar_int_seq
450     {
451       \seq_map_pairwise_function:NNN
452       \g__enumext_footnote_standar_int_seq
453       \g__enumext_footnote_standar_arg_seq
454       \__enumext_footnotetext:nn
455     }
456     \seq_gclear:N \g__enumext_footnote_standar_arg_seq
457     \seq_gclear:N \g__enumext_footnote_standar_int_seq
458   }

```

The `enumext*` and `keyans*` environments are implemented using `minipage` so we must also redefine `\footnote` to keep these numbering as if it were part of the document.

```

459   \cs_new_protected:Nn \__enumext_renew_footnote_mini:
460   {
461     \RenewDocumentCommand \footnote { o +m }
462     {
463       \tl_if_novalue:nTF {##1}
464       {
465         \stepcounter{footnote}
466         \int_gset_eq:Nc \g__enumext_footnote_starred_int { c@footnote }
467       }
468       {
469         \int_gset:Nn \g__enumext_footnote_starred_int { ##1 }
470       }
471       \footnotemark [ \g__enumext_footnote_starred_int ]
472       \seq_gput_right:Nn \g__enumext_footnote_starred_arg_seq { ##2 }
473       \seq_gput_right:NV
474       \g__enumext_footnote_starred_int_seq \g__enumext_footnote_starred_int
475     }
476   }
477   \cs_new_protected:Nn \__enumext_print_footnote_mini:
478   {
479     \seq_if_empty:NF \g__enumext_footnote_starred_int_seq
480     {
481       \seq_map_pairwise_function:NNN
482       \g__enumext_footnote_starred_int_seq
483       \g__enumext_footnote_starred_arg_seq
484       \__enumext_footnotetext:nn
485     }
486     \seq_gclear:N \g__enumext_footnote_starred_arg_seq
487     \seq_gclear:N \g__enumext_footnote_starred_int_seq
488   }

```

(End of definition for `__enumext_footnotetext:nn` and others.)

`__enumext_renew_footnote_standar:`
`__enumext_print_footnote_standar:`
`__enumext_renew_footnote_starred:`
`__enumext_print_footnote_starred:`

We encapsulate the redefinition of `\footnote` to pass it to internal `__enumext_mini_page` environment used by the `mini-env` key in the `enumext` and `keyans` environments. We will run the redefinition when `tagged` PDF is active or when the `footnotehyper` package is not loaded.

```

489   \cs_new_protected:Nn \__enumext_renew_footnote_standar:
490   {
491     \bool_if:NT \g__enumext_standar_bool
492     {
493       \IfDocumentMetadataTF
494       {
495         \__enumext_renew_footnote:
496       }
497       {
498         \bool_if:NF \l__enumext_footnotes_key_bool
499         {

513   {
514     \bool_if:NF \l__enumext_footnotes_key_bool
515     {
516       \__enumext_print_footnote:
517     }
518   }
519 }
520 }

```

We encapsulate the redefinition of `\footnote` to pass it to the `enumext*` and `keyans*` environments. We will run the redefinition when *tagged* PDF is active or when the `footnotehyper` package is not loaded.

```

521 \cs_new_protected:Nn \__enumext_renew_footnote_starred:
522 {
523   \IfDocumentMetadataTF
524   {
525     \__enumext_renew_footnote_mini:
526   }
527   {
528     \bool_if:NF \l__enumext_footnotes_key_bool
529     {
530       \__enumext_renew_footnote_mini:
531     }
532   }
533 }
534 \cs_new_protected:Nn \__enumext_print_footnote_starred:
535 {
536   \IfDocumentMetadataTF
537   {
538     \__enumext_print_footnote_mini:
539   }
540   {
541     \bool_if:NF \l__enumext_footnotes_key_bool
542     {
543       \__enumext_print_footnote_mini:
544     }
545   }
546 }

```

In `enumext*` and `keyans*` environments we need to use “hooks” to print `\footnote` with support for *tagged* PDF.

```

547 \__enumext_after_env:nn { enumext* }
548 {
549   \__enumext_print_footnote_starred:
550 }
551 \__enumext_after_env:nn { keyans* }
552 {
553   \__enumext_print_footnote_starred:
554 }

```

(End of definition for `__enumext_renew_footnote_standar:` and others.)

13.9 The internal minipage environment

```

\__enumext_internal_mini_page:
__enumext_mini_env*

```

The function `__enumext_internal_mini_page:` creates a internal `__enumext_mini_page` environment (*custom version* of `minipage`) setting the `\if@minipage` switch to “false” to allow spaces at the “above” of the environment, plus we will add `\skip_vertical:N \c_zero_skip` to maintain alignment on “top” in the first part and `\skip_vertical:N \c_zero_skip` in the second part to allow spaces “below”. This environment will be used internally by the `mini-env` key, it is NOT documented in the user interface and is for internal use only. Within this environment we redefine `\footnote` to make them look the same as if they were elsewhere in the document. This function is passed to the function `__enumext_safe_exec:` in the `enumext` environment definition (§13.40) and `__enumext_safe_exec_vii:` in the `enumext*` environment definition (§13.45)

```

555 \cs_new_protected:Nn \__enumext_internal_mini_page:
556 {
557   \int_compare:nNnT { \l__enumext_level_int } = { 0 }
558   {

```

```

559 \DeclareDocumentEnvironment{__enumext_mini_page}{ m }
560 {
561     \__enumext_renew_footnote_standar:
562     \__enumext_minipage:w [ t ] { ##1 }
563     \legacy_if_gset_false:n { @minipage }
564     \skip_vertical:N \c_zero_skip
565 }
566 {
567     \skip_vertical:N \c_zero_skip
568     \__enumext_endminipage:
569     \__enumext_print_footnote_standar:
570 }
571 }
572 }

```

(End of definition for `__enumext_internal_mini_page:` and `__enumext_mini_env*`.)

13.10 Definition of public dimension

The package `enumext` only provides a single public dimension `\itemwidth` and is intended for user convenience only and is not for internal use as such. This dimension is set in all environments and is only used by the `wrap-ans` key at its default value.

```

573 \dim_zero_new:N \itemwidth

```

13.11 Definition of counters

To create the necessary “*counters*” we must first make sure that they are not already defined by the user or a package such as `enumitem`, otherwise a error will be returned and the package loading will be aborted. The arguments taken by the function are:

- `#1`: A token list `__enumext_counter_X_tl` for “*store*” the counter’s name.
`#2`: The counter’s name.

```

enumXi
enumXii
enumXiii
enumXiv
enumXv
enumXvi
enumXvii
enumXviii
574 \cs_new_protected:Npn \__enumext_define_counter:Nn #1 #2
575 {
576     \cs_if_exist:cTF { c@ #2 }
577     { \msg_fatal:nnn { enumext } { counters } { #2 } }
578     {
579         \tl_set:Nn #1 { #2 }
580         \newcounter { #2 }
581     }
582 }

```

The counters created here are `enumXi`, `enumXii`, `enumXiii` and `enumXiv` for `enumext` environment, `enumXv` for `keyans` environment, `enumXvi` for `keyanspic` environment, `enumXvii` for `enumext*` and `enumXviii` for the `keyans*` environments.

```

583 \__enumext_define_counter:Nn \__enumext_counter_i_tl { enumXi }
584 \__enumext_define_counter:Nn \__enumext_counter_ii_tl { enumXii }
585 \__enumext_define_counter:Nn \__enumext_counter_iii_tl { enumXiii }
586 \__enumext_define_counter:Nn \__enumext_counter_iv_tl { enumXiv }
587 \__enumext_define_counter:Nn \__enumext_counter_v_tl { enumXv }
588 \__enumext_define_counter:Nn \__enumext_counter_vi_tl { enumXvi }
589 \__enumext_define_counter:Nn \__enumext_counter_vii_tl { enumXvii }
590 \__enumext_define_counter:Nn \__enumext_counter_viii_tl { enumXviii }

```

(End of definition for `__enumext_define_counter:Nn` and others.)

13.12 Definition of labels

This part of the code is inspired by the `enumitem` package. The idea is to be able to access the counters using `\arabic*`, `\Alph*`, `\alph*`, `\Roman*` and `\roman*` to use them in the `label` key.

- 🔗 Direct support for this is provided since L^AT_EX release 2025-06-01[13], but we will keep the original implementation so as not to hinder the internal “*label and ref*” system.

These `<counters>` will be used as default `<labels>` if the `label` key is not used for the different levels of the `enumext`, `enumext*`, `keyans` and `keyans*` environments, so it is necessary to get a default value for `labelwidth` from these `<labels>` at the same time.

```

591 \cs_new_protected:Npn \__enumext_register_default_label_wd:Nn #1 #2
592 {
593     \tl_const:cn { c__enumext_widest_ \cs_to_str:N #1 _tl } {#2}
594     \tl_gput_right:Nn \g__enumext_counter_styles_tl {#1}
595 }
596 \__enumext_register_default_label_wd:Nn \arabic { 0 }
597 \__enumext_register_default_label_wd:Nn \Alph { M }

```

```

598 \__enumext_register_default_label_wd:Nn \alph { m }
599 \__enumext_register_default_label_wd:Nn \Roman { VIII }
600 \__enumext_register_default_label_wd:Nn \roman { viii }

```

(End of definition for __enumext_register_default_label_wd:Nn.)

```

\__enumext_label_width_by_box:Nn
\__enumext_label_width_by_box:cv

```

The function __enumext_label_width_by_box:Nn set the default \labelwidth using a box width if no \labelwidth key is passed.

```

601 \cs_new_protected:Npn \__enumext_label_width_by_box:Nn #1 #2
602 {
603   \hbox_set:Nn \l__enumext_label_width_by_box {#2}
604   \dim_set:Nn #1 { \box_wd:N \l__enumext_label_width_by_box }
605 }
606 \cs_generate_variant:Nn \__enumext_label_width_by_box:Nn { cv }

```

(End of definition for __enumext_label_width_by_box:Nn.)

```

\__enumext_label_style:Nnn
\__enumext_label_style:cvn

```

The function __enumext_label_style:Nnn is used by the label key to creates the variables containing the *label style* and will allow to use \arabic*, \Alph*, \alph*, \Roman* and \roman* as arguments. It loops through the defined counter styles in \g__enumext_counter_styles_tl (\arabic, \alph, \Alph, \roman and \Roman) for example, looking for \roman* and replacing that by \roman{<counter>}, and doing the same for the \g__enumext_widest_label_tl to keep both in sync.

```

607 \cs_new_protected:Npn \__enumext_label_style:Nnn #1 #2 #3
608 {
609   \tl_clear_new:N #1
610   \tl_put_right:Ne #1 { \tl_trim_spaces:n {#3} }
611   \tl_gset_eq:NN \g__enumext_widest_label_tl #1
612   \tl_map_inline:Nn \g__enumext_counter_styles_tl
613   {
614     \tl_replace_all:Nne #1 { ##1* } { \exp_not:N ##1 {#2} }
615     \tl_greplace_all:Nne \g__enumext_widest_label_tl { ##1* }
616     { \tl_use:c { c__enumext_widest_ \cs_to_str:N ##1 _tl } }
617   }
618   \__enumext_label_width_by_box:Nn \l__enumext_current_widest_dim
619   { \tl_use:N \g__enumext_widest_label_tl }
620   \tl_set_eq:cN { the #2 } #1
621 }
622 \cs_generate_variant:Nn \__enumext_label_style:Nnn { cvn }

```

(End of definition for __enumext_label_style:Nnn.)

13.13 Setting keys associated with label

When *tagged* PDF is active \makelabel is redefined using \makebox to work correctly (§13.35). From the user side it is convenient to have a key that allows using this redefinition with \makebox without having \IfDocumentMetadataTF active.

mode-box

We define the key mode-box only for the “first level” of enumext and enumext* environments.

```

623 \cs_set_protected:Npn \__enumext_tmp:n #1
624 {
625   \keys_define:nn { enumext / #1 }
626   {
627     mode-box .bool_set:N = \l__enumext_mode_box_bool,
628     mode-box .initial:n = false,
629     mode-box .value_forbidden:n = true,
630   }
631 }
632 \clist_map_inline:nn { level-1, enumext* } { \__enumext_tmp:n {#1} }

```

(End of definition for mode-box.)

```

font
labelsep
labelwidth
wrap-label
wrap-label*

```

Definition of keys font, labelsep, labelwidth, wrap-label and wrap-label* keys for enumext and keyans environments.

```

633 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
634 {
635   \keys_define:nn { enumext / #1 }
636   {
637     font .tl_set:c = { l__enumext_label_font_style_#2_tl },
638     font .value_required:n = true,
639     labelsep .dim_set:c = { l__enumext_labelsep_#2_dim },
640     labelsep .initial:n = {0.3333em},

```

```

641     labelsep .value_required:n = true,
642     labelwidth .dim_set:c = { l__enumext_labelwidth_#2_dim },
643     labelwidth .value_required:n = true,
644     wrap-label .cs_set_protected:cp = { __enumext_wrapper_label_#2:n } ##1,
645     wrap-label .initial:n = {##1},
646     wrap-label .value_required:n = true,
647     wrap-label* .code:n = {
648         \bool_set_true:c { l__enumext_wrap_label_opt_#2_bool }
649         \keys_set:nn { enumext / #1 } { wrap-label = {##1} }
650     },
651     wrap-label* .value_required:n = true,
652 }
653 }
654 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

(End of definition for font and others.)

align The `align` key is implemented differently for “starred” and “non starred” environments. For compatibility with *tagged* PDF we must set `\l__enumext_align_label_pos_X_str`.

```

655 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
656 {
657     \keys_define:nn { enumext / #1 }
658     {
659         align .choice:,
660         align / left .code:n =
661             {
662                 \tl_clear:c { l__enumext_label_fill_left_#2_tl }
663                 \tl_set:cn { l__enumext_label_fill_right_#2_tl } { \hfill }
664                 \str_set:cn { l__enumext_align_label_pos_#2_str } { l }
665             },
666         align / right .code:n =
667             {
668                 \tl_set:cn { l__enumext_label_fill_left_#2_tl } { \hfill }
669                 \tl_clear:c { l__enumext_label_fill_right_#2_tl }
670                 \str_set:cn { l__enumext_align_label_pos_#2_str } { r }
671             },
672         align / center .code:n =
673             {
674                 \tl_set:cn { l__enumext_label_fill_left_#2_tl } { \hfill }
675                 \tl_set:cn { l__enumext_label_fill_right_#2_tl } { \hfill }
676                 \str_set:cn { l__enumext_align_label_pos_#2_str } { c }
677             },
678         align / unknown .code:n =
679             \msg_error:nneee { enumext } { unknown-choice }
680             { align } { left,~right,~ center } { \exp_not:n {##1} },
681         align .initial:n = left,
682         align .value_required:n = true,
683     }
684 }
685 \clist_map_inline:nn
686 {
687     {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {keyans}{v}
688 }
689 { \__enumext_tmp:nn #1 }
690 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
691 {
692     \keys_define:nn { enumext / #1 }
693     {
694         align .choice:,
695         align / left .code:n = \str_set:cn { l__enumext_align_label_#2_str } { l },
696         align / right .code:n = \str_set:cn { l__enumext_align_label_#2_str } { r },
697         align / center .code:n = \str_set:cn { l__enumext_align_label_#2_str } { c },
698         align / unknown .code:n =
699             \msg_error:nneee { enumext } { unknown-choice }
700             { align } { left,~right,~ center } { \exp_not:n {##1} },
701         align .initial:n = left,
702         align .value_required:n = true,
703     }
704 }
705 \clist_map_inline:nn { {enumext*}{vii}, {keyans*}{viii} } { \__enumext_tmp:nn #1 }

```

(End of definition for align.)

13.14 Setting label and ref keys

The implementation of the keys `label` and `ref` are part of the core of the package `enumext`, here the default values for $\langle label \rangle$, the value of the variables $\backslash_enumext_label_X_tl$, the default values for $\backslash labelwidth$ and the “*label and ref*” system.

13.14.1 Define and set label and ref keys for enumext environment

Here we set the default $\langle labels \rangle$ of the *four levels* of `enumext` environment, along with the default value for `labelwidth` key and `ref` key.

```

label
ref
\__enumext_label_i_tl
\__enumext_label_ii_tl
\__enumext_label_iii_tl
\__enumext_label_iv_tl
706 \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
707 {
708   \keys_define:nn { enumext / #1 }
709   {
710     label .code:n = {
711       \__enumext_label_style:cvn { \__enumext_label_#2_tl }
712       { \__enumext_counter_#2_tl } {##1}
713       \dim_set_eq:cN { \__enumext_labelwidth_#2_dim }
714       \__enumext_current_widest_dim
715     },
716     label .initial:n = #3,
717     label .value_required:n = true,
718     ref .code:n = \__enumext_standar_ref:n {##1},
719     ref .value_required:n = true,
720   }
721 }
722 \__enumext_tmp:nnn { level-1 } { i } { \arabic*. }
723 \__enumext_tmp:nnn { level-2 } { ii } { (\alph*. ) }
724 \__enumext_tmp:nnn { level-3 } { iii } { \roman*. }
725 \__enumext_tmp:nnn { level-4 } { iv } { \Alph*. }
```

(End of definition for `label` and others.)

`__enumext_standar_ref:n`
`__enumext_standar_ref:`

The `__enumext_standar_ref:n` function will first pass the key *argument* `ref` to the variable $\backslash_enumext_ref_key_arg_tl$ and analyze its state, if it is not *empty* it will set a copy of of the *current counter style* save in $\backslash_enumext_the_counter_X_tl$ to $\backslash_enumext_ref_the_count_tl$ and then set the variable $\backslash_enumext_renew_counter_X_tl$ which will modify $\backslash theenumX$.

```

726 \cs_new_protected:Npn \__enumext_standar_ref:n #1
727 {
728   \tl_set:Nn \__enumext_ref_key_arg_tl {#1}
729   \tl_if_empty:NTF \__enumext_ref_key_arg_tl
730   {
731     \msg_error:nnn { enumext } { key-ref-empty } { enumext }
732   }
733   {
734     \tl_set_eq:Nc \__enumext_ref_the_count_tl
735     {
736       \__enumext_the_counter_ \__enumext_level: _tl
737     }
738     \tl_set:ce { \__enumext_renew_counter_ \__enumext_level: _tl }
739     {
740       \exp_not:N \renewcommand { \exp_not:V \__enumext_ref_the_count_tl }
741       { \exp_not:V \__enumext_ref_key_arg_tl }
742     }
743   }
744 }
```

Finally the function `__enumext_standar_ref:` will execute the modification for the reference system in the second argument of the environment definition `enumext`.

```

745 \cs_new_protected:Npn \__enumext_standar_ref:
746 {
747   \tl_if_empty:cF { \__enumext_renew_counter_ \__enumext_level: _tl }
748   {
749     \tl_use:c { \__enumext_renew_counter_ \__enumext_level: _tl }
750   }
751 }
```

(End of definition for `__enumext_standar_ref:n` and `__enumext_standar_ref:`.)

13.14.2 Define and set label and ref keys for enumext* and keyans* environments

label Here we set the default $\langle labels \rangle$ for `enumext*` and `keyans*` environments, along with the default value for
ref `labelwidth` key and `ref` key.

```

\l__enumext_label_vii_tl 752 \cs_set_protected:Npn \l__enumext_tmp:nnn #1 #2 #3
\l__enumext_label_viii_tl 753 {
754   \keys_define:nn { enumext / #1 }
755   {
756     label .code:n = {
757       \__enumext_label_style:cvn { \l__enumext_label_#2_tl }
758       { \l__enumext_counter_#2_tl } {##1}
759       \dim_set_eq:cN { \l__enumext_labelwidth_#2_dim }
760       \l__enumext_current_widest_dim
761     },
762     label .initial:n = #3,
763     label .value_required:n = true,
764     ref .code:n = \l__enumext_starred_ref:n {##1},
765     ref .value_required:n = true,
766   }
767 }
768 \__enumext_tmp:nnn { enumext* } { vii } { \arabic*.}
769 \__enumext_tmp:nnn { keyans* } { viii } { \Alph*.}

```

(End of definition for label and others.)

__enumext_starred_ref:n The implementation of `__enumext_starred_ref:n` is the same as that used for the environment `enumext`.
__enumext_starred_ref:

```

770 \cs_new_protected:Npn \__enumext_starred_ref:n #1
771 {
772   \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
773   \int_compare:nNnT { \l__enumext_level_h_int } = { 1 }
774   {
775     \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
776     {
777       \msg_error:nnn { enumext } { key-ref-empty } { enumext* }
778     }
779     {
780       \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_vii_tl
781       \tl_set:Ne \l__enumext_renew_counter_vii_tl
782       {
783         \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl } { \exp_not:V
784       }
785     }
786   }
787   \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
788   {
789     \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
790     {
791       \msg_error:nnn { enumext } { key-ref-empty } { keyans* }
792     }
793     {
794       \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_viii_tl
795       \tl_set:Ne \l__enumext_renew_counter_viii_tl
796       {
797         \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl } { \exp_not:V
798       }
799     }
800   }
801 }

```

Finally the function `__enumext_starred_ref:` will execute the modification for the reference system in the second argument of the `enumext*` and `keyans*` environment definition.

```

802 \cs_new_protected:Nn \__enumext_starred_ref:
803 {
804   \int_compare:nNnT { \l__enumext_level_h_int } = { 1 }
805   {
806     \tl_if_empty:NF \l__enumext_renew_counter_vii_tl
807     {
808       \tl_use:N \l__enumext_renew_counter_vii_tl
809     }
810   }
811   \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
812   {

```

```

813         \tl_if_empty:NF \l__enumext_renew_counter_viii_tl
814         {
815             \tl_use:N \l__enumext_renew_counter_viii_tl
816         }
817     }
818 }

```

(End of definition for `__enumext_starred_ref:n` and `__enumext_starred_ref:.`)

13.14.3 Define and set `label` and `ref` keys for `keyans` and `keyanspic` environments

Here we set the default `<label>` for `keyans` and `keyanspic` environment, along with the default value for `labelwidth` if it has not been established and `ref` key. The `keyanspic` environment use the same `<label>` as the `keyans` environment.

```

\__enumext_label_v_tl
\__enumext_label_vi_tl
819 \keys_define:nn { enumext / keyans }
820 {
821     label .code:n = {
822         \__enumext_label_style:cnv { \__enumext_label_v_tl }
823         { \__enumext_counter_v_tl } {#1}
824         \__enumext_label_style:cnv { \__enumext_label_vi_tl }
825         { \__enumext_counter_vi_tl } {#1}
826         \dim_set_eq:NN
827         \__enumext_labelwidth_v_dim \__enumext_current_widest_dim
828     },
829     label .initial:n = \Alph*,
830     label .value_required:n = true,
831     ref .code:n = \__enumext_keyans_ref:n {#1},
832     ref .value_required:n = true,
833 }

```

(End of definition for `label` and others.)

The implementation of `__enumext_keyans_ref:n` is the same as that used for the environment `enumext`.

```

\__enumext_keyans_ref:n
\__enumext_keyans_ref:
834 \cs_new_protected:Npn \__enumext_keyans_ref:n #1
835 {
836     \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
837     \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
838     {
839         \msg_error:nnn { enumext } { key-ref-empty } { keyans }
840     }
841     {
842         \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_v_tl
843         \tl_put_right:Ne \l__enumext_renew_counter_v_tl
844         {
845             \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl } { \exp_not:V \l__
846         }
847     }
848 }

```

Finally the function `__enumext_keyans_ref:` will execute the modification for the reference system in the second argument of the `keyans*` environment definition.

```

849 \cs_new_protected:Nn \__enumext_keyans_ref:
850 {
851     \tl_if_empty:NF \l__enumext_renew_counter_v_tl
852     {
853         \tl_use:N \l__enumext_renew_counter_v_tl
854     }
855 }

```

(End of definition for `__enumext_keyans_ref:n` and `__enumext_keyans_ref:.`)

13.15 Setting `start`, `start*` and `widest` keys

The function `__enumext_start_from:NNn` used by `start` and `start*` keys take three arguments:

```

\__enumext_start_from:ccn #1: \l__enumext_label_X_tl
\__enumext_start_from:cce #2: \l__enumext_start_X_int
\__enumext_start_from:cce #3: <integer or string>

```

The first argument of this function are the “*counter style*” set by `label` key, the second argument is returned by the function, the third argument can be an `<integer>` or `<string>` of the form `\Alph`, `\alph`, `\Roman` or `\roman`. This effectively allows `start*=A` or `start=1` to be used.

```

856 \cs_new_protected:Npn \__enumext_start_from:NNn #1 #2 #3
857 {

```

```

858     \__enumext_if_is_int:nTF { #3 }
859     {
860         \int_set:Nn #2 {#3}
861     }
862     {
863         \regex_if_match:nVT { \c{Alph} | \c{alph} } {#1}
864         { \int_set:Nn #2 { \int_from_alph:n {#3} } }
865         \regex_if_match:nVT { \c{Roman} | \c{roman} } {#1}
866         { \int_set:Nn #2 { \int_from_roman:n {#3} } }
867     }
868 }
869 \cs_generate_variant:Nn \__enumext_start_from:NNn { ccn, cce }

```

(End of definition for __enumext_start_from:NNn.)

```

\__enumext_widest_from:nNNn
\__enumext_widest_from:nccn

```

The function __enumext_widest_from:nNNn used by the `widest` key take four arguments:

- #1: The counter associated with the environment level
- #2: \l__enumext_label_X_tl
- #3: \l__enumext_labelwidth_X_dim
- #4: *<integer or string>*

The second and third arguments of this function are the values set by `label` and `labelwidth` keys, the four argument can be an *<integer>* or *<string>* of the form `\Alph`, `\alph`, `\Roman` or `\roman`. The value of the four argument is set temporarily for the identified counter in this point (level), then the value is expanded into a “box” and the “width” of the “box” is returned.

```

870 \cs_new_protected:Npn \__enumext_widest_from:nNNn #1 #2 #3 #4
871 {
872     \__enumext_if_is_int:nTF {#4}
873     {
874         \setcounter{enumX#1} { #4 }
875     }
876     {
877         \regex_if_match:nVT { \c{Alph} | \c{alph} } {#2}
878         { \setcounter{enumX#1} { \int_from_alph:n {#4} } }
879         \regex_if_match:nVT { \c{Roman} | \c{roman} } {#2}
880         { \setcounter{enumX#1} { \int_from_roman:n {#4} } }
881     }
882     \__enumext_label_width_by_box:cv
883     { \__enumext_labelwidth_#1_dim } { \__enumext_label_#1_tl }
884 }
885 \cs_generate_variant:Nn \__enumext_widest_from:nNNn { nccn }

```

(End of definition for __enumext_widest_from:nNNn.)

Now define and set `start*`, `start` and `widest` keys for `enumext`, `enumext*`, `keyans` and `keyans*` environments.

`start`

`start*`

`widest`

```

886 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
887 {
888     \keys_define:nn { enumext / #1 }
889     {
890         start* .code:n = {
891             \__enumext_start_from:ccn
892             { \__enumext_label_#2_tl }
893             { \__enumext_start_#2_int } {##1}
894         },
895         start* .value_required:n = true,
896         start .code:n = {
897             \__enumext_start_from:cce
898             { \__enumext_label_#2_tl }
899             { \__enumext_start_#2_int } { \int_eval:n {##1} }
900         },
901         start .initial:n = 1,
902         start .value_required:n = true,
903         widest .code:n = {
904             \__enumext_widest_from:nccn {#2}
905             { \__enumext_label_#2_tl }
906             { \__enumext_labelwidth_#2_dim } {##1}
907         },
908         widest .value_required:n = true,
909     }
910 }
911 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

(End of definition for `start`, `start*`, and `widest`.)

13.16 Setting keys for penaltys

`beginpenalty`
`midpenalty`
`endpenalty`

The three parameters `\@beginparpenalty`, `\@itempenalty` and `\@endparpenalty` work together to ensure that list environments look good, avoiding unsightly page breaks that can break the flow of the `list`, so it's a good idea to have a `(keys)` to access these.

```

912 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
913 {
914   \keys_define:nn { enumext / #1 }
915   {
916     beginpenalty .int_set:c = { l__enumext_beginparpenalty_#2_int },
917     beginpenalty .initial:n = -51,
918     beginpenalty .value_required:n = true,
919     midpenalty .int_set:c = { l__enumext_itempenalty_#2_int },
920     midpenalty .initial:n = -51,
921     midpenalty .value_required:n = true,
922     endpenalty .int_set:c = { l__enumext_endparpenalty_#2_int },
923     endpenalty .initial:n = -51,
924     endpenalty .value_required:n = true,
925   }
926 }
927 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

(End of definition for `beginpenalty`, `midpenalty`, and `endpenalty`.)

13.17 Setting keys for vertical spaces

`topsep`
`partopsep`
`parsep`
`noitemsep`
`nosep`

Define and set `topsep`, `partopsep`, `parsep`, `itemsep`, `noitemsep` and `nosep` keys for `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```

928 \cs_set_protected:Npn \__enumext_tmp:nnnnnn #1 #2 #3 #4 #5 #6
929 {
930   \keys_define:nn { enumext / #1 }
931   {
932     topsep .skip_set:c = { l__enumext_topsep_#2_skip },
933     topsep .initial:n = {#3},
934     topsep .value_required:n = true,
935     partopsep .skip_set:c = { l__enumext_partopsep_#2_skip },
936     partopsep .initial:n = {#4},
937     partopsep .value_required:n = true,
938     parsep .skip_set:c = { l__enumext_parsep_#2_skip },
939     parsep .initial:n = {#5},
940     parsep .value_required:n = true,
941     itemsep .skip_set:c = { l__enumext_itemsep_#2_skip },
942     itemsep .initial:n = {#6},
943     itemsep .value_required:n = true,
944     noitemsep .meta:n = { itemsep = 0pt, parsep = 0pt },
945     noitemsep .value_forbidden:n = true,
946     nosepp .meta:n = {
947       itemsep = 0pt, parsep = 0pt,
948       topsep = 0pt, partopsep = 0pt,
949     },
950     nosepp .value_forbidden:n = true,
951   }
952 }

```

Now we set the values based on standard `article` class in `10pt`.

```

953 \__enumext_tmp:nnnnnn { level-1 } { i } { 8.0pt plus 2.0pt minus 4.0pt }
954 { 2.0pt plus 1.0pt minus 1.0pt } { 4.0pt plus 2.0pt minus 1.0pt }
955 { 4.0pt plus 2.0pt minus 1.0pt }
956 \__enumext_tmp:nnnnnn { level-2 } { ii } { 4.0pt plus 2.0pt minus 1.0pt }
957 { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
958 { 2.0pt plus 1.0pt minus 1.0pt }
959 \__enumext_tmp:nnnnnn { level-3 } { iii } { 2.0pt plus 1.0pt minus 1.0pt }
960 { 1.0pt minus 1.0pt } { 0pt } { 2.0pt plus 1.0pt minus 1.0pt }
961 \__enumext_tmp:nnnnnn { level-4 } { iv } { 2.0pt plus 1.0pt minus 1.0pt }
962 { 1.0pt minus 1.0pt } { 0pt } { 2.0pt plus 1.0pt minus 1.0pt }
963 \__enumext_tmp:nnnnnn { keyans } { v } { 4.0pt plus 2.0pt minus 1.0pt }
964 { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
965 { 2.0pt plus 1.0pt minus 1.0pt }
966 \__enumext_tmp:nnnnnn { enumext* } { vii } { 8.0pt plus 2.0pt minus 4.0pt }
967 { 2.0pt plus 1.0pt minus 1.0pt } { 4.0pt plus 2.0pt minus 1.0pt }

```

```

968 { 4.0pt plus 2.0pt minus 1.0pt }
969 \__enumext_tmp:nnnnn { keyans* } { viii } { 4.0pt plus 2.0pt minus 1.0pt }
970 { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
971 { 2.0pt plus 1.0pt minus 1.0pt }

```

(End of definition for `topsep` and others.)

13.18 Setting base-fix key

When nesting starting right after `\item` (without material between them) there is a problem with the alignment of the *baseline* between the two environments. One way to get around this problem is to place `\mode_leave_vertical:` apply `\vspace{-\baselineskip}` and set `\topsep=0pt` for the “first level” of the nested `enumext` environment.

```

base-fix \__enumext_nested_base_line_fix:
972 \keys_define:nn { enumext / level-1 }
973 {
974   base-fix .bool_set:N = \l__enumext_base_line_fix_bool,
975   base-fix .initial:n = false,
976   base-fix .value_forbidden:n = true,
977 }

```

The function `__enumext_nested_base_line_fix:` passed to the `__enumext_parse_keys:n` function in the definition of the `enumext` environment (§13.40) will be responsible for applying the *baseline correction* and adjusting the *keys* for the `enumext` environment and the `\printkeyans` with *starred argument* ‘*’ (§13.48).

We will first implement the function code from the user side of the `base-fix` key, that is, only the user knows when it is necessary to apply it within the document in which case the variable `\l__enumext_print_keyans_star_bool` set by the `\printkeyans` command is false and the variable `\l__enumext_base_line_fix_bool` is true.

We set the values of the keys `topsep`, `above` and `above*` for the “first level” of `enumext` environment equal to `0pt` and finally set the variable `\l__enumext_base_line_fix_bool` to false.

```

978 \cs_new_protected:Nn \__enumext_nested_base_line_fix:
979 {
980   \bool_lazy_all:nT
981   {
982     { \bool_if_p:N \l__enumext_starred_first_bool }
983     { \bool_if_p:N \l__enumext_base_line_fix_bool }
984     { \bool_not_p:n { \l__enumext_print_keyans_star_bool } }
985   }
986   {
987     \mode_leave_vertical:
988     \vspace { -\dim_eval:n { \baselineskip + \parsep } }
989     \keys_set:nn { enumext / level-1 }
990     {
991       topsep = 0pt, above = 0pt, above* = 0pt,
992     }
993   }

```

When we are running the `\printkeyans` command with the *starred argument* ‘*’ the variable `\l__enumext_print_keyans_star_bool` is true and we can run a simplified version of `\vspace` using `\skip_vertical:n`.

```

994 \bool_lazy_and:nnT
995 { \bool_if_p:N \l__enumext_starred_first_bool }
996 { \bool_if_p:N \l__enumext_print_keyans_star_bool }
997 {
998   \mode_leave_vertical:
999   \skip_vertical:n { -\baselineskip }
1000   \skip_vertical:N \c_zero_skip
1001   \keys_set:nn { enumext / level-1 }
1002   {
1003     topsep = 0pt, above = 0pt, above* = 0pt,
1004   }
1005 }
1006 \bool_set_false:N \l__enumext_base_line_fix_bool
1007 }

```

(End of definition for `base-fix` and `__enumext_nested_base_line_fix:`.)

13.19 Setting keys for horizontal spaces

Define and set `itemindent`, `rightmargin`, `listparindent`, `list-offset` and `list-indent` keys for `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```

1008 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1009 {
1010   \keys_define:nn { enumext / #1 }
1011   {
1012     itemindent .dim_set:c = { l__enumext_fake_item_indent_#2_dim },
1013     itemindent .value_required:n = true,
1014     rightmargin .dim_set:c = { l__enumext_rightmargin_#2_dim },
1015     rightmargin .value_required:n = true,
1016     listparindent .dim_set:c = { l__enumext_listparindent_#2_dim },
1017     listparindent .value_required:n = true,
1018     list-offset .dim_set:c = { l__enumext_listoffset_#2_dim },
1019     list-offset .value_required:n = true,
1020     list-indent .code:n =
1021       \bool_set_true:c { l__enumext_leftmargin_tmp_#2_bool }
1022       \dim_set:cn { l__enumext_leftmargin_tmp_#2_dim } {##1},
1023     list-indent .value_required:n = true,
1024   }
1025 }
1026 \clist_map_inline:nn
1027 {
1028   {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {keyans}{v}
1029 }
1030 { \__enumext_tmp:nn #1 }

```

(End of definition for `itemindent` and others.)

For `enumext*` and `keyans*` environments the situation is a bit different, the `list-indent` key behaves like the `list-offset` key.

```

1031 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1032 {
1033   \keys_define:nn { enumext / #1 }
1034   {
1035     itemindent .dim_set:c = { l__enumext_fake_item_indent_#2_dim },
1036     itemindent .value_required:n = true,
1037     rightmargin .dim_set:c = { l__enumext_rightmargin_#2_dim },
1038     rightmargin .value_required:n = true,
1039     listparindent .dim_set:c = { l__enumext_listparindent_#2_dim },
1040     listparindent .value_required:n = true,
1041     list-offset .dim_set:c = { l__enumext_listoffset_#2_dim },
1042     list-offset .value_required:n = true,
1043     list-indent .meta:n = { list-offset = ##1 },
1044     list-indent .value_required:n = true,
1045   }
1046 }
1047 \clist_map_inline:nn
1048 {
1049   {enumext*}{vii}, {keyans*}{viii}
1050 }
1051 { \__enumext_tmp:nn #1 }

```

13.19.1 Functions for setting the fake `itemindent`

The `itemindent` key does not set the value of `\itemindent`, it only sets the value of the *horizontal space* applied using `\skip_horizontal:N`. We will store this value in the variable and only apply it when it is greater than `\opt`. Here I will need to place `\mode_leave_vertical:` and the plain TeX macro `\ignorespaces` to avoid unwanted extra space when using the `itemindent` key.

```

1052 \cs_set_protected:Nn \__enumext_fake_item_indent:
1053 {
1054   \dim_compare:nNnT
1055     { \dim_use:c { l__enumext_fake_item_indent_ \__enumext_level: _dim } }
1056     >
1057     { \c_zero_dim }
1058   {
1059     \tl_set:ce { l__enumext_fake_item_indent_ \__enumext_level: _tl }
1060     {

1102         }
1103     }
1104 }

```

(End of definition for `__enumext_fake_item_indent:` and others.)

13.20 Setting show-length key

show-length

Define and set `show-length` key for `enumext`, `enumext*`, `keyans` and `keyans*` environments. The function sets the boolean variable `\l__enumext_show_length_X_bool` used in the definition of all environments to “true” and calls the function `__enumext_show_length:nnn` which prints all the values of the “vertical” and “horizontal” parameters calculated and used.

```

1105 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1106 {
1107     \keys_define:nn { enumext / #1 }
1108     {
1109         show-length .bool_set:c = { \l__enumext_show_length_#2_bool },
1110         show-length .initial:n = false,
1111     }
1112 }
1113 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

(End of definition for `show-length`.)

13.21 Setting before, after and first keys

before

before*

after

first

Define and set `before`, `before*`, `after` and `first` keys for `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```

1114 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1115 {
1116     \keys_define:nn { enumext / #1 }
1117     {
1118         before .tl_set:c = { \l__enumext_before_no_starred_key_#2_tl },
1119         before .value_required:n = true,

```

```

1120     before* .tl_set:c = { l__enumext_before_starred_key_#2_tl },
1121     before* .value_required:n = true,
1122     after .tl_set:c = { l__enumext_after_stop_list_#2_tl },
1123     after .value_required:n = true,
1124     first .tl_set:c = { l__enumext_after_list_args_#2_tl },
1125     first .value_required:n = true,
1126   }
1127 }
1128 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

(End of definition for *before* and others.)

13.21.1 Functions for before, after and first keys in enumext

The function `__enumext_before_args_exec:` executes the `{⟨code⟩}` set by the *before** key “before” the `enumext` environment is started. The `{⟨code⟩}` is executed “without” knowing any definition of the `{⟨arg two⟩}` of the list: `{⟨code⟩}\list{⟨arg one⟩}{⟨arg two⟩}`.

```

1129 \cs_new_protected:Nn \__enumext_before_args_exec:
1130 {
1131   \tl_use:c { l__enumext_before_starred_key_ \__enumext_level: _tl }
1132 }

```

The function `__enumext_before_keys_exec:` executes the `{⟨code⟩}` set by the *before* key “before” the `enumext` environment is started in *second argument* of the list. The `{⟨code⟩}` is executed “knowing” all definition and values provides by `⟨keys⟩: \list{⟨arg one⟩}{⟨arg two⟩}{⟨code⟩}`

```

1133 \cs_new_protected:Nn \__enumext_before_keys_exec:
1134 {
1135   \tl_use:c { l__enumext_before_no_starred_key_ \__enumext_level: _tl }
1136 }

```

The function `__enumext_after_stop_list:` executes the `{⟨code⟩}` set by the *after* key “after” the `enumext` environment has finished: `\endlist{⟨code⟩}`.

```

1137 \cs_new_protected:Nn \__enumext_after_stop_list:
1138 {
1139   \tl_use:c { l__enumext_after_stop_list_ \__enumext_level: _tl }
1140 }

```

The function `__enumext_after_args_exec:` executes the `{⟨code⟩}` set by the *first* key after the end of the second argument of the list defining the `enumext` environment, just before the first occurrence of `\item: \list{⟨arg one⟩}{⟨arg two⟩}{⟨code⟩}\item.`

```

1141 \cs_new_protected:Nn \__enumext_after_args_exec:
1142 {
1143   \tl_use:c { l__enumext_after_list_args_ \__enumext_level: _tl }
1144 }

```

(End of definition for `__enumext_before_args_exec:` and others.)

13.21.2 Functions for before, after and first keys in keyans

Same implementation as the one used in the `enumext` environment.

```

\__enumext_before_args_exec_v:
\__enumext_before_keys_exec_v:
\__enumext_after_stop_list_v:
\__enumext_after_args_exec_v:
1145 \cs_new_protected:Nn \__enumext_before_args_exec_v:
1146 {
1147   \tl_use:N \l__enumext_before_starred_key_v_tl
1148 }
1149 \cs_new_protected:Nn \__enumext_before_keys_exec_v:
1150 {

1170 {
1171   \tl_use:N \l__enumext_before_no_starred_key_vii_tl
1172 }
1173 \cs_new_protected:Nn \__enumext_before_keys_exec_viii:
1174 {
1175   \tl_use:N \l__enumext_before_no_starred_key_viii_tl
1176 }
1177 \cs_new_protected:Nn \__enumext_after_stop_list_vii:
1178 {
1179   \tl_use:N \l__enumext_after_stop_list_vii_tl
1180 }
1181 \cs_new_protected:Nn \__enumext_after_stop_list_viii:
1182 {
1183   \tl_use:N \l__enumext_after_stop_list_viii_tl
1184 }
1185 \cs_new_protected:Nn \__enumext_after_args_exec_vii:
1186 {
1187   \tl_use:N \l__enumext_after_list_args_vii_tl
1188 }
1189 \cs_new_protected:Nn \__enumext_after_args_exec_viii:
1190 {
1191   \tl_use:N \l__enumext_after_list_args_viii_tl
1192 }
```

(End of definition for __enumext_before_args_exec_vii: and others.)

13.22 Setting keys for multicol and minipage

```
mini-env
mini-sep
columns-sep
columns
```

The default value of the `columns-sep` key is handled by the state of the boolean variable `\l__enumext_columns_sep_X_bool` which is handled in the internal definition of the [enumext](#) and [keyans](#) environments. Define and set `mini-env`, `mini-sep`, `columns-sep` and `columns` keys for [enumext](#), [enumext*](#), [keyans](#) and [keyans*](#) environments.

```
1193 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1194 {
1195   \keys_define:nn { enumext / #1 }
1196   {
1197     mini-env .dim_set:c = { l__enumext_minipage_right_#2_dim },
1198     mini-env .value_required:n = true,
1199     mini-sep .dim_set:c = { l__enumext_minipage_hsep_#2_dim },
1200     mini-sep .initial:n = 0.3333em,
1201     mini-sep .value_required:n = true,
1202     columns-sep .dim_set:c = { l__enumext_columns_sep_#2_dim },
1203     columns-sep .value_required:n = true,
1204     columns .int_set:c = { l__enumext_columns_#2_int },
1205     columns .initial:n = 1,
1206     columns .value_required:n = true,
1207   }
1208 }
1209 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

For [enumext*](#) and [keyans*](#) environments the situation is a bit different, the command `\miniright` is not available, so we will add the keys `mini-right` and `mini-right*` to implement support for [minipage](#) environment.

```
1210 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1211 {
1212   \keys_define:nn { enumext / #1 }
1213   {
1214     mini-right .tl_gset:c = { g__enumext_miniright_code_#2_tl },
1215     mini-right .value_required:n = true,
1216     mini-right* .code:n = {
```

```

1217         \bool_gset_true:c { g__enumext_minipage_center_#2_bool }
1218         \keys_set:nn { enumext / #1 } { mini-right = {##1} }
1219     },
1220     mini-right* .value_required:n = true,
1221 }
1222 }
1223 \clist_map_inline:nn { {enumext*}{vii}, {keyans*}{viii} } { \__enumext_tmp:nn #1 }

```

(End of definition for `mini-env` and others.)

13.23 Adjustment of vertical spaces for multicols

When nesting a “list environment” inside the `multicols` environment, the values of the “vertical spaces” are lost, basically the `multicols` environment takes control over them. Graphically it can be seen like in the figure 7.

Figure 7: Representation of the vertical space in `multicols` for a nested level.

To keep the desired spaces *above* and *below* in the “list environment” (`\topsep` + `[\partopsep]`) it is necessary to “adjust” the spaces added by the `multicols` environment. The most appropriate option in this case is to use a “context sensitive” vertical space with `\addvspace`.

I should make it clear that the implementation here is a “bit questionable”. At first glance doing `\multicolsep=\topsep` seemed right, but the results were not always as expected. An almost *imperceptible* detail is that in some cases the `\itemsep` values of are “stretched”, possibly due to the use of `\raggedcolumns` and this affects the lower space when closing the environment, which is “smaller” than expected. My attempts to find the correct values using `\showoutput` and `\showboxdepth` absolutely failed.

13.23.1 Adjustment of vertical spaces for multicols in enumext

`__enumext_multi_set_vskip:` The function `__enumext_multi_set_vskip:` will take care of determining the “adjusted spaces” that we will apply “above” and “below” the `multicols` environment in `enumext`.

We will set the default values taking into account that \TeX is in *horizontal mode*, then we will make the settings for the *vertical mode* in which `\partopsep` comes into play.

Set the values of `\l__enumext_multicols_above_X_skip` and `\l__enumext_multicols_below_X_skip` equal to the value of `\topsep` in the *current level*.

```

1224 \cs_new_protected:Nn \__enumext_multi_set_vskip:
1225 {
1226     \skip_set:cn { l__enumext_multicols_above_ \__enumext_level: _skip }
1227     {
1228         \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
1229     }
1230     \skip_set:cn { l__enumext_multicols_below_ \__enumext_level: _skip }
1231     {
1232         \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
1233     }
1234     \__enumext_add_pre_parsep:
1235 }

```

(End of definition for `__enumext_multi_set_vskip:`)

`__enumext_add_pre_parsep:` The function `__enumext_add_pre_parsep:` “adjusted” the value of `\l__enumext_multicols_above_X_skip` detecting the value of `\parsep` from the previous level. This is necessary since `\parsep` from the previous level affects the *vertical spaces*.

```

1236 \cs_new_protected:Nn \__enumext_add_pre_parsep:
1237 {
1238     \int_case:nn { \l__enumext_level_int }
1239     {
1240         { 2 }{
1241             \skip_if_eq:nnF { \l__enumext_parsep_i_skip } { \c_zero_skip }
1242             {
1243                 \skip_add:Nn \l__enumext_multicols_above_ii_skip
1244                 {
1245                     \l__enumext_parsep_i_skip
1246                 }
1247             }
1248         }
1249     }
1250 }

```

```

1249     { 3 }{
1250         \skip_if_eq:nnF { \l__enumext_parsep_ii_skip } { \c_zero_skip }
1251         {
1252             \skip_add:Nn \l__enumext_multicols_above_iii_skip
1253             {
1254                 \l__enumext_parsep_ii_skip
1255             }
1256         }
1257     }
1258     { 4 }{
1259         \skip_if_eq:nnF { \l__enumext_parsep_iii_skip } { \c_zero_skip }
1260         {
1261             \skip_add:Nn \l__enumext_multicols_above_iv_skip
1262             {
1263                 \l__enumext_parsep_iii_skip
1264             }
1265         }
1266     }
1267 }
1268 }

```

(End of definition for `\l__enumext_add_pre_parsep:`)

`\l__enumext_multi_addvspace:` The function `\l__enumext_multi_addvspace:` will apply the spaces set using `\addvspace` “above” the `multicols` environment in `enumext`, taking into account whether TeX is in *horizontal mode* or *vertical mode*.

```

1269 \cs_new_protected:Nn \l__enumext_multi_addvspace:
1270 {
1271     \l__enumext_multi_set_vskip:
1272     \mode_if_vertical:T
1273     {
1274         \skip_add:cn { \l__enumext_multicols_above_ \l__enumext_level: _skip }
1275         {
1276             \skip_use:c { \l__enumext_partopsep_ \l__enumext_level: _skip }
1277         }
1278         \skip_add:cn { \l__enumext_multicols_below_ \l__enumext_level: _skip }
1279         {
1280             \skip_use:c { \l__enumext_partopsep_ \l__enumext_level: _skip }
1281         }
1282     }
1283     \par\nopagebreak
1284     \addvspace{ \skip_use:c { \l__enumext_multicols_above_ \l__enumext_level: _skip } }
1285 }

```

(End of definition for `\l__enumext_multi_addvspace:`)

13.23.2 Adjustment of vertical spaces for multicols in keyans

`\l__enumext_keyans_multi_set_vskip:` The function `\l__enumext_keyans_multi_set_vskip:` will take care of determining the “adjusted spaces” that we will apply “above” and “below” the `multicols` environment in `keyans`. The implementation of this function is the same as the one used in `enumext`.

`\l__enumext_keyans_multi_addvspace:`

```

1286 \cs_new_protected:Nn \l__enumext_keyans_multi_set_vskip:
1287 {
1288     \skip_set:Nn \l__enumext_multicols_above_v_skip
1289     {
1290         \l__enumext_topsep_v_skip
1291     }
1292     \skip_set:Nn \l__enumext_multicols_below_v_skip
1293     {
1294         \l__enumext_topsep_v_skip
1295     }
1296 }
1297 \cs_new_protected:Nn \l__enumext_keyans_multi_addvspace:
1298 {

1300     \mode_if_vertical:T
1301     {
1302         \skip_add:Nn \l__enumext_multicols_above_v_skip
1303         {
1304             \skip_use:N \l__enumext_partopsep_v_skip
1305         }
1306         \skip_add:Nn \l__enumext_multicols_below_v_skip

```

```

1307     {
1308         \skip_use:N \l__enumext_partopsep_v_skip
1309     }
1310 }
1311 \par\nopagebreak
1312 \addvspace{ \l__enumext_multicols_above_v_skip }
1313 }

```

(End of definition for `__enumext_keyans_multi_set_vskip:` and `__enumext_keyans_multi_addvspace:`.)

13.24 Adjustment of vertical spaces for minipage

When nesting a “list environment” within the `minipage` environment, the values of the “vertical spaces” are lost. Graphically it can be seen like in the figure 8.

Figure 8: Representation of the `minipage` spacing adjustment for a nested level.

Since we want to keep the “left” and “right” environments “aligned on top”, preserving the `\baselineskip` and keep the desired “spaces” (`\topsep` + `[\partopsep]`) it is necessary to “adjust” the “vertical spaces” for `minipage` environments.

Here there are several complications that we must circumvent, the `minipage` environment eliminates the “top” spaces, the `multicols` environment can be nested in the `minipage` environment, the “top” and “bottom” spaces are affected when `topsep=0pt` and to this is added the `\partopsep` parameter that comes into action according to whether \TeX is in $\langle horizontal mode \rangle$ or $\langle vertical mode \rangle$. Depending on these cases, small adjustments must be made using `\vspace` and `\addvspace` to obtain the “desired vertical spacing”.

- Again I must make clear that the implementation here is a “bit questionable”, but hunting the spaces (glue) produced by the `minipage` environment is quite complicated, even more if `multicols` it is nested. The setting of the values was more “trial and error” (approx to `\strutbox`), using the help of the `lua-visual-debug`[15] package, again my attempts to find the correct values using `\showoutput` and `\showboxdepth` absolutely failed.

13.24.1 Adjustment of vertical spaces for minipage in enumext

```

\__enumext_minipage_set_skip:
\__enumext_minipage_add_space:

```

The function `__enumext_minipage_set_skip:` will take care of determining the “adjust” spaces that we will apply “above” and “below” the `__enumext_mini_page` environment in `enumext`.

First we will set the value of `\l__enumext_minipage_right_skip` equal to `\topsep`, then we will see if \TeX is in $\langle vertical mode \rangle$ and we will add `\partopsep`, followed by that we set the value of `\l__enumext_minipage_after_skip`.

```

1314 \cs_new_protected:Nn \__enumext_minipage_set_skip:
1315 {
1316     \skip_set:Nn \l__enumext_minipage_right_skip
1317     {
1318         \skip_use:c { \l__enumext_topsep_ \__enumext_level: _skip }
1319     }
1320     \mode_if_vertical:T
1321     {
1322         \skip_add:Nn \l__enumext_minipage_right_skip
1323         {
1324             \skip_use:c { \l__enumext_partopsep_ \__enumext_level: _skip }
1325         }
1326     }
1327     \skip_set_eq:NN \l__enumext_minipage_after_skip \l__enumext_minipage_right_skip

```

We will adjust the values `\l__enumext_multicols_above_X_skip` and `\l__enumext_multicols_below_X_skip` and call the function `__enumext_pre_itemsep_skip:`.

```

1328     \skip_set_eq:cN
1329     { \l__enumext_multicols_above_ \__enumext_level: _skip } \l__enumext_minipage_right_skip
1330     \skip_set_eq:cN
1331     { \l__enumext_multicols_below_ \__enumext_level: _skip } \l__enumext_minipage_right_skip
1332     \__enumext_pre_itemsep_skip:

```

If the environment `multicols` is active, we set `\topskip=0pt` and then we make `\multicolsep` have the same value as `\l__enumext_multicols_above_X_skip`.

```

1333     \int_compare:nNnT
1334     { \int_use:c { \l__enumext_columns_ \__enumext_level: _int } } > { 1 }
1335     {
1336         \skip_zero:N \topskip

```

```

1337     \skip_set_eq:Nc \multicolsep { \l__enumext_multicols_above_ \l__enumext_level: _skip }
1338   }
1339 }

```

The function `\l__enumext_minipage_add_space:` will apply the spaces on the “left side” using `\addvspace` “above” the `\l__enumext_mini_page` environment, taking into account whether \TeX is in $\langle horizontal\ mode \rangle$ or $\langle vertical\ mode \rangle$. Here we use the plain \TeX macro `\nointerlineskip` to prevent baseline “glue” being added between the next pair of boxes in a *vertical list*. For the latter we will make some adjustments since the `\partopsep` parameter comes into play and this affects the *vertical spacing*.

```

1340 \cs_new_protected:Nn \l__enumext_minipage_add_space:
1341 {
1342   \l__enumext_minipage_set_skip:

1633 }

```

(End of definition for `__enumext_mini_addvspace_vii:` and `__enumext_mini_addvspace_viii:`)

13.24.4 The command `\miniright`

The command `\miniright` will close the `__enumext_mini_page` environment on the “left side”, open the `__enumext_mini_page` environment on the “right side” adding the *adjusted vertical space*. By default we will add `\centering` when starting the “right side” environment. The *starred argument* ‘`*`’ inhibits the use of `\centering` command i.e. the usual \TeX justification is maintained in the `__enumext_mini_page` on the “right side”.

`\miniright`

First we will perform some checks to prevent the command from being executed outside the `enumext` environment or somewhere inappropriate then we will call the internal functions to execute it in the `enumext` and `keyans` environments.

```

1634 \NewDocumentCommand \miniright { s }
1635 {
1636     \int_compare:nNt { \l__enumext_keyans_pic_level_int } = { 1 }
1637     {
1638         \msg_error:nnn { enumext } { wrong-miniright-place }
1639     }
1640     % outside
1641     \bool_lazy_and:nnT
1642     { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }

```

```

1643     { \int_compare:p:nNn { \l__enumext_level_h_int } = { 0 } }
1644     {
1645       \msg_error:nnn { enumext } { wrong-miniright-place }
1646     }
1647   % starred env
1648   \bool_lazy_and:nnT
1649     { \bool_if_p:N \g__enumext_starred_bool }
1650     { \bool_not_p:n { \l__enumext_standar_bool } }
1651     {
1652       \msg_error:nnn { enumext } { wrong-miniright-starred }
1653     }
1654   % exec
1655   \int_compare:nNnTF { \l__enumext_keyans_level_int } = { 1 }
1656     {
1657       \__enumext_keyans_mini_right_cmd:n {#1}
1658     }
1659     { \__enumext_mini_right_cmd:n {#1} }
1660 }

```

(End of definition for `\miniright`. This function is documented on page 11.)

`__enumext_mini_right_cmd:n`

The function `__enumext_mini_right_cmd:n` takes as argument the *starred* ‘`*`’ of the `\miniright` command in the `enumext` environment. We check if the `mini-env` key is active via the variable `\l__enumext_minipage_right_X_dim`, if so we close the `multicols` environment with the `__enumext_mini_page` environment on the “left side”, then we open the `__enumext_mini_page` environment on the “right side”, apply our adjusted “vertical spaces”, followed by adding the `\centering` command when the *starred argument* ‘`*`’ is not present and set zero `\g__enumext_minipage_stat_int`, otherwise we return an error.

```

1661 \cs_new_protected:Npn \__enumext_mini_right_cmd:n #1

13.25 Setting above and below keys

While having controlled the *vertical spaces* within the `enumext` and `keyans` environments when using the `columns` or `mini-env` keys, sometimes the “vertical spaces above” or “vertical spaces below” the environments are not as expected and it is necessary to be able to apply a “fine correction” to these. As I have not been able to correct these *glitches*, the best option is to leave a couple of (*keys*) dedicated to this purpose, in this case it is best to use `\vspace` or `\vspace*` when convenient.

Define `above`, `above*`, `below` and `below*` keys for `enumext` and `keyans` environments.

```

1717 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1718 {
1719     \keys_define:nn { enumext / #1 }
1720     {
1721         above .skip_set:c = { \__enumext_vspace_above_#2_skip },
1722         above .value_required:n = true,
1723         above* .code:n      = \bool_set_true:c { \__enumext_vspace_a_star_#2_bool }
1724             \keys_set:nn { enumext / #1 } { above = {##1} },
1725         above* .value_required:n = true,
1726         below .skip_set:c = { \__enumext_vspace_below_#2_skip },
1727         below .value_required:n = true,
1728         below* .code:n      = \bool_set_true:c { \__enumext_vspace_b_star_#2_bool }
1729             \keys_set:nn { enumext / #1 } { below = {##1} },
1730         below* .value_required:n = true,
1731     }
1732 }
1733 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

(End of definition for `above` and others.)

13.25.1 Functions for above and below keys in enumext

`__enumext_vspace_above:` The function `__enumext_vspace_above:` apply the *vertical space above* the `enumext` environment set by the `above*` and `above` keys.

```

1734 \cs_new_protected:Nn \__enumext_vspace_above:
1735 {
1736     \skip_if_eq:nnF
1737     { \skip_use:c { \__enumext_vspace_above_ \__enumext_level: _skip } } { \c_zero_skip }

13.26 Setting series, resume and resume* keys

The `series` key is responsible for the whole process of the `resume` and `resume*` keys. The idea behind this is to be able to absorb the *(keys)* passed to the *optional argument* of the of the environments `enumext` and `enumext*`, but, discarding some specific *(keys)*. This implementation is adapted directly from the code provided by Jonathan P. Spratte (@Skillmon) in `chat-Tex-SX`

We define the keys `series`, `resume` and `resume*` for the “all levels” of `enumext` and `enumext*`. Here we do not need to make sure that `\printkeyans` is not running otherwise the startup value of the environments would be increased when using `resume` or `resume*` keys.

```

1828 \cs_set_protected:Npn \__enumext_tmp:n #1
1829 {
1830     \keys_define:nn { enumext / #1 }
1831     {
1832         series .str_set:N = \l__enumext_series_name_str,
1833         series .value_required:n = true,
1834         resume* .code:n = {
1835             \bool_if:NF \l__enumext_print_keyans_cmd_bool
1836             {
1837                 \__enumext_resume_star:
1838             }
1839         },
1840         resume* .value_forbidden:n = true,
1841     }
1842 }
1843 \clist_map_inline:nn {level-1, level-2, level-3, level-4, enumext*} { \__enumext_tmp:n {#1} }
1844 \cs_set_protected:Npn \__enumext_tmp:n #1
1845 {
1846     \keys_define:nn { enumext / #1 }
1847     {
1848         resume .code:n = {
1849             \bool_if:NF \l__enumext_print_keyans_cmd_bool
1850             {
1851                 \__enumext_resume_series:n {##1}

```

```

1852         }
1853     },
1854 }
1855 }
1856 \clist_map_inline:nn {level-1, level-2, level-3, level-4} { \__enumext_tmp:n {#1} }
1857 \keys_define:nn { enumext / enumext* }
1858 {
1859     resume .code:n = {
1860         \bool_if:NF \__enumext_print_keyans_cmd_bool
1861         {
1862             \__enumext_resume_series_vii:n {#1}
1863         }
1864     },
1865 }

```

(End of definition for `series`, `resume`, and `resume*`.)

13.26.1 Internal functions for series key

The function `__enumext_filter_series:n` will be in charge of filtering the *⟨keys⟩* we want to store where *{#1}* represents the *optional argument* passed to the environment.

```

\__enumext_filter_series:n
\__enumext_filter_series_key:n
\__enumext_filter_series_pair:nn
1866 \cs_new:Npn \__enumext_filter_series:n #1
1867 {
1868     \use:e
1869     {
1870         \keyval_parse:NNn
1871         \__enumext_filter_series_key:n
1872         \__enumext_filter_series_pair:nn {#1}
1873     }
1874 }

```

The function `__enumext_filter_series_key:n` will be responsible for filtering the *⟨keys⟩* that are passed “without value” by excluding the `resume`, `resume*` and `base-fix` keys.

```

1875 \cs_new:Npn \__enumext_filter_series_key:n #1
1876 {
1877     \str_case:nnF {#1}
1878     {
1879         { resume } {} { resume* } {} { base-fix } {}
1880     }
1881     { , { \exp_not:n {#1} } }
1882 }

```

The function `__enumext_filter_series_pair:nn` will be responsible for filtering the *⟨keys⟩* that are passed “with value” by excluding the `series`, `resume`, `start`, `start*`, `save-ans` and `save-key` keys.

```

1883 \cs_new:Npn \__enumext_filter_series_pair:nn #1#2
1884 {
1885     \str_case:nnF {#1}
1886     {
1887         { series } {} { resume } {} { start } {}
1888         { start* } {} { save-ans } {} { save-key } {}
1889     }
1890     { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
1891 }

```

(End of definition for `__enumext_filter_series:n`, `__enumext_filter_series_key:n`, and `__enumext_filter_series_pair:nn`.)

The function `__enumext_parse_series:n` will be responsible for storing the filtered *⟨keys⟩* in the global variable `\g__enumext_series_⟨series name⟩_tl` along with the creation of the integer variable `\g__enumext_series_⟨series name⟩_int` when the key is passed as an argument; otherwise, it will check the state of the boolean variable `\l__enumext_resume_X_bool` set by the keys `resume` and `resume*` and will call the function `__enumext_resume_last:n`.

🔗 The value of boolean variable `\l__enumext_resume_X_bool` is set to true by the function `__enumext_resume_counter:n` which is used by the keys `resume` and `resume*`, in this case we must make sure it is set to false so that it does not overwrite the default filtered *⟨keys⟩*. This function is passed to the function `__enumext_parse_keys:n` in the `enumext` environment definition (§13.40) and to the function `__enumext_parse_keys_vii:n` in the `enumext*` environment definition (§13.45).

```

1892 \cs_new_protected:Npn \__enumext_parse_series:n #1
1893 {

13.26.2 Internal function to save counter value

```

\__enumext_standar_save_counter:
\__enumext_standar_save_counter_aux:
\__enumext_starred_save_counter:
\__enumext_starred_save_counter_aux:

```

The `__enumext_standar_save_counter:` and `__enumext_starred_save_counter:` functions will save the last counter value to `\g__enumext_series_⟨series name⟩_int` if the `series={⟨series name⟩}` key has been passed, to `\g__enumext_resume_X_int` if it has passed the key `resume` *without value* and the key `series` is not active, in `\g__enumext_series_⟨series name⟩_int` if the key `resume={⟨series name⟩}` has been passed and in `\g__enumext_series_⟨store name⟩_int` if the key has been passed `save-ans={⟨store name⟩}`.

- The variables `__enumext_series_name_str` and `__enumext_series_name_tl` contain the same *⟨series name⟩* but are executed at different moments, the integer variable with `__enumext_series_name_str` sets the value when execute `series={⟨series name⟩}` and the integer variable with `__enumext_series_name_tl` sets the subsequent

values when use `resume={(series name)}`. This function is passed to the `enumext` environment definition (§13.40) and the `enumext*` environment definition (§13.45).

```

13.26.4 Internal function for resume* key

`__enumext_resume_star:`

The function `__enumext_resume_star:` will handle the `resume*` key in the `enumext` and `enumext*` environments. This function will execute the filtered `⟨keys⟩` in the last one and will continue with the numbering and `⟨keys⟩` according to the last execution of the environment `enumext` or `enumext*` in which the keys `resume={⟨series name⟩}` or `series={⟨series name⟩}` were NOT active.

```

2193 \cs_new_protected:Nn \__enumext_resume_star:
2194 {
2195     \cs_set:Npn \__enumext_tmp:n ##1
2196     {

```

```

2197         \tl_if_empty:cF { g__enumext_not_key_series_ \int_to_roman:n {##1} _tl }
2198         {
2199             \__enumext_resume_counter:n { }
2200             \exp_args:Ne \keys_set:nv
2201             { enumext / level-\int_use:N \__enumext_level_int }
2202             { g__enumext_not_key_series_ \int_to_roman:n {##1} _tl }
2203         }
2204     }
2205     \int_compare:nNnT { \__enumext_level_int } > { 0 }
2206     {
2207         \int_step_function:nnN { 1 } { \__enumext_level_int } \__enumext_tmp:n
2208     }
2209     \int_compare:nNnT { \__enumext_level_h_int } = { 1 }
2210     {

2212         {
2213             \__enumext_resume_counter:n { }
2214             \keys_set:nV { enumext / enumext* } \g__enumext_not_key_series_vii_tl
2215         }
2216     }
2217 }

```

(End of definition for __enumext_resume_star:.)

13.27 Setting save-ans, check-ans and no-store keys

The key `save-ans` is directly associated with the keys `check-ans`, `no-store`, `resume` and `resume*`, this will activate the entire “storage system” in the `enumext` package.

13.27.1 Setting save-ans key

`save-ans` We define the keys `save-ans` only for the “first level” of `enumext` and `enumext*`.

```

2218 \cs_set_protected:Npn \__enumext_tmp:n #1
2219 {
2220     \keys_define:nn { enumext / #1 }
2221     {
2222         save-ans .code:n = \__enumext_storing_set:n {##1},
2223         save-ans .value_required:n = true,
2224     }
2225 }
2226 \clist_map_inline:nn { level-1, enumext* } { \__enumext_tmp:n {#1} }

```

(End of definition for `save-ans`.)

13.27.2 Internal functions for save-ans key

__enumext_start_save_ans_msg:
__enumext_stop_save_ans_msg:

The functions `__enumext_start_save_ans_msg:` and `__enumext_stop_save_ans_msg:` will display in the terminal and `.log` file the environment in which the `save-ans` key was executed along with the line at the beginning and end of it. The function `__enumext_start_save_ans_msg:` will be passed to `__enumext_storing_set:n` and the function `__enumext_stop_save_ans_msg:` will be passed to the function `__enumext_execute_after_env:`.

```

2227 \cs_new_protected:Nn \__enumext_start_save_ans_msg:
2228 {
2229     \msg_term:nnVV { enumext } { save-ans-log }
2230     \g__enumext_envir_name_tl \__enumext_store_name_tl
2231 }
2232 \cs_new_protected:Nn \__enumext_stop_save_ans_msg:
2233 {
2234     \msg_term:nnVV { enumext } { save-ans-log-hook }
2235     \g__enumext_envir_name_tl \__enumext_store_name_tl
2236 }

```

(End of definition for `__enumext_start_save_ans_msg:` and `__enumext_stop_save_ans_msg:`.)

__enumext_storing_set:n
__enumext_storing_exec:

The function `__enumext_storing_set:n` first pass the value of the `save-ans` key to the variable `__enumext_store_name_tl` which will contain the `{(store name)}` of the *sequence* and *prop list* we will use. If `__enumext_store_name_tl` is *empty* we return an error message, otherwise will return the appropriate message `__enumext_start_save_ans_msg:` and proceed to execute the function `__enumext_storing_exec:` for `enumext` and `enumext*` environments.

```

2237 \cs_new_protected:Npn \__enumext_storing_set:n #1
2238 {
2239     \tl_set:Ne \__enumext_store_name_tl {#1}
2240     \tl_if_empty:NTF \__enumext_store_name_tl

```

```

2241     {
2242         \bool_lazy_or:nnT
2243         { \l__enumext_standar_first_bool } { \l__enumext_starred_first_bool }
2244         {
2245             \msg_error:nnV { enumext } { save-ans-empty } \g__enumext_envir_name_tl
2246         }
2247     }
2248     {
2249         \bool_lazy_or:nnT
2250         { \l__enumext_standar_first_bool } { \l__enumext_starred_first_bool }
2251         {
2252             \__enumext_start_save_ans_msg:
2253             \__enumext_storing_exec:
2254         }
2255     }
2256 }

```

The function `__enumext_storing_exec:` will set to true the variable `\l__enumext_store_active_bool` which activates the use of the `\anskey` command and the `anskey*`, `keyans`, `keyans*` and `keyanspic` environments and will set to “true” the variable `\l__enumext_check_answers_bool` used for internal checking answers mechanism set by the `check-ans` and `no-store` keys, copy `{\<store name>}` into the variable `\g__enumext_store_name_tl`.

```

2257 \cs_new_protected:Nn \__enumext_storing_exec:
2258 {
2259     \bool_set_true:N \l__enumext_store_active_bool
2260     \bool_set_true:N \l__enumext_check_answers_bool
2261     \tl_gset:NV \g__enumext_store_name_tl \l__enumext_store_name_tl

```

The *prop list* `\g__enumext_series_{\<store name>}_prop` and the *sequence* `\g__enumext_series_{\<store name>}_seq` will be created globally to “store content” in case they do not exist together with the integer variable `\g__enumext_series_{\<store name>}_int` used by the keys `resume` and `resume*`.

```

2262     \prop_if_exist:cF { g__enumext_ \l__enumext_store_name_tl _prop }
2263     {
2264         \msg_log:nnV { enumext } { store-prop } \l__enumext_store_name_tl
2265         \prop_new:c { g__enumext_ \l__enumext_store_name_tl _prop }
2266     }
2267     \seq_if_exist:cF { g__enumext_ \l__enumext_store_name_tl _seq }
2268     {
2269         \msg_log:nnV { enumext } { store-seq } \l__enumext_store_name_tl
2270         \seq_new:c { g__enumext_ \l__enumext_store_name_tl _seq }
2271     }
2272     \int_if_exist:cF { g__enumext_resume_ \l__enumext_store_name_tl _int }
2273     {
2274         \msg_log:nnV { enumext } { store-int } \l__enumext_store_name_tl
2275         \int_new:c { g__enumext_resume_ \l__enumext_store_name_tl _int }
2276     }
2277 }

```

(End of definition for `__enumext_storing_set:n` and `__enumext_storing_exec:`)

13.27.3 The check answer mechanism

The internal mechanism for “checking answers” follows this logic:

If the line begins with `\item` or `\item*` and does NOT *open a nested environment*, each `\item` or `\item*` must contain a *single* execution of the `\anskey` command, i.e. the counter of the executions of the `\anskey` command must be equal to the counter associated with the sum of executions of `\item` and `\item*`.

If the line begins with `\item` or `\item*` and *opens a nested environment* each `\item` or `\item*` in the nested environment must have a *single* execution of the `\anskey` command and the counter associated to the sum of `\item` and `\item*` executions must decrementing by “one” to maintain equality.

In order for the mechanism for the check-answer to work (not counting `keyans`, `keyans*` and `keyanspic`) we need:

1. We must keep track of the total number of `\item` and `\item*` (enumerated) that appear within the environment including the nested levels.
2. We must keep track of the total number of `\item` and `\item*` (enumerated) that appear per level of nesting.
3. Keeping track of the number of times the environment nests.

The integer variable associated to the sum of each `\item` and `\item*` in the environment `\g__enumext_item_number_int` must match the integer variable `\g__enumext_item_anskey_int` associated to the execution of the command `\anskey`. We analyze the cases:

- If the list only has one level the number of `\item` + `\item*` = `\anskey`
- If the list has *nested levels*, for each level of nesting we need to decrementing by one (for the `\item` or `\item*` that opens the nest) so that the account remains the same.

With `keyans`, `keyans*` and `keyanspic` it is enough to increase in one the integer of `\anskey`. The integers created must be global if they are not lost in the interior levels of nesting and to execute the test we will use a “hook” function after closing the *first level* of the environment.

13.27.4 Setting check-ans and no-store keys

Now we define the keys `check-ans` and `no-store` for all levels of `enumext` and `enumext*` environments.

```
check-ans 2278 \cs_set_protected:Npn \__enumext_tmp:n #1
no-store 2279 {
2280   \keys_define:nn { enumext / #1 }
2281   {
2282     check-ans .bool_set:N = \__enumext_check_ans_key_bool,
2283     check-ans .initial:n = false,
2284     check-ans .value_required:n = true,
2285     no-store .code:n = {
2286       \bool_set_false:N \__enumext_check_answers_bool
2287       \bool_set_false:N \__enumext_check_ans_key_bool
2288     },
2289     no-store .value_forbidden:n = true,
2290   }
2291 }
2292 \clist_map_inline:nn
2293 {
2294   level-1, level-2, level-3, level-4, enumext*
2295 }
2296 { \__enumext_tmp:n {#1} }
```

(End of definition for `check-ans` and `no-store`.)

13.27.5 Set-up check answer mechanism

`__enumext_check_ans_active:` The function `__enumext_check_ans_active:` will first check the state of the variable `\l__enumext_store_name_tl`, that is, the `save-ans` key is active, if so it will check the state of the variable `\l__enumext_check_answers_bool` handled by the key `no-store` and will execute the function `__enumext_check_ans_level:` only if “true”, i.e. the key `no-store` is not active.

```
2297 \cs_new_protected:Nn \__enumext_check_ans_active:
2298 {
2299   \tl_if_empty:NF \l__enumext_store_name_tl
2300   {
2301     \bool_if:NT \l__enumext_check_answers_bool
2302     {
2303       \__enumext_check_ans_level:
2304     }
2305   }
2306 }
```

The function `__enumext_check_ans_level:` will decrement by “one” the value of the variable `\g__enumext_item_number_int` which keeps track of the executions of `\item` and `\item*` for each level of nesting of the environment `enumext`, taking into account whether it is nested within `enumext*` or the opposite and set `\l__enumext_item_number_bool` to “false”.

```
2307 \cs_new_protected:Nn \__enumext_check_ans_level:
2308 {
2309   \int_case:nn { \l__enumext_level_int }
2310   {
2311     { 1 } {
2312       \bool_lazy_all:nT
2313       {
2314         { \bool_if_p:N \g__enumext_starred_bool }
2315         { \int_compare_p:nNn { \l__enumext_level_h_int } = { 1 } }
2316       }
2317       {
2318         \int_gdecr:N \g__enumext_item_number_int
2319         \bool_set_false:N \l__enumext_item_number_bool
2320       }
2321     }
2322 }
```

```

2322     { 2 }{
2323         \int_gdecr:N \g__enumext_item_number_int
2324         \bool_set_false:N \l__enumext_item_number_bool
2325     }
2326     { 3 }{
2327         \int_gdecr:N \g__enumext_item_number_int
2328         \bool_set_false:N \l__enumext_item_number_bool
2329     }
2330     { 4 }{
2331         \int_gdecr:N \g__enumext_item_number_int
2332         \bool_set_false:N \l__enumext_item_number_bool
2333     }
2334 }

```

We should only execute this if `enumext*` is nested in the “*first level*” of `enumext`, for the rest of the cases the value of `\g__enumext_item_number_int` is already decreased.

```

2335     \int_case:nn { \l__enumext_level_h_int }
2336     {
2337         { 1 }{
2338             \bool_lazy_all:nT
2339             {
2340                 { \bool_if_p:N \g__enumext_standar_bool }
2341                 { \int_compare_p:nNn { \l__enumext_level_int } = { 1 } }
2342             }
2343             {
2344                 \int_gdecr:N \g__enumext_item_number_int
2345                 \bool_set_false:N \l__enumext_item_number_bool
2346             }
2347         }
2348     }
2349 }

```

(End of definition for `__enumext_check_ans_active:` and `__enumext_check_ans_level:`.)

`__enumext_check_ans_key_hook:`

The function `__enumext_check_ans_key_hook:` will *export* the status of the local variable `\l__enumext_check_ans_key_bool` to the global variable `\g__enumext_check_ans_key_bool` only if the key `check-ans` is active.

```

2350 \cs_new_protected:Nn \__enumext_check_ans_key_hook:
2351 {
2352     \bool_lazy_and:nnT
2353     { \bool_if_p:N \l__enumext_check_ans_key_bool }
2354     { \bool_if_p:N \g__enumext_standar_bool }
2355     {
2356         \bool_gset_true:N \g__enumext_check_ans_key_bool
2357     }
2358     \bool_lazy_and:nnT
2359     { \bool_if_p:N \l__enumext_check_ans_key_bool }
2360     { \bool_if_p:N \g__enumext_starred_bool }
2361     {
2362         \bool_gset_true:N \g__enumext_check_ans_key_bool
2363     }
2364 }

```

(End of definition for `__enumext_check_ans_key_hook:`.)

`__enumext_item_answer_diff:`

The function `__enumext_item_answer_diff:` will set the value of the variable `\g__enumext_item_answer_diff_int` which is used by the functions `__enumext_check_ans_show:` for the key `save-ans` and by the function `__enumext_check_ans_log:` by the internal “*check answer*” mechanism. This function will be passed to the function `__enumext_execute_after_env:`.

```

2365 \cs_new_protected:Nn \__enumext_item_answer_diff:
2366 {
2367     \int_gset:Nn \g__enumext_item_answer_diff_int
2368     {
2369         \int_sign:n { \g__enumext_item_number_int - \g__enumext_item_anskey_int }
2370     }
2371 }

```

(End of definition for `__enumext_item_answer_diff:`.)

`__enumext_check_ans_show:`
`__enumext_check_ans_msg_less:`
`__enumext_check_ans_msg_same_ok:`
`__enumext_check_ans_msg_greater:`

The function `__enumext_check_ans_show:` will be executed within the function `__enumext_execute_after_env:` when the key `check-ans` is active, that is, when `\g__enumext_check_ans_key_bool` is “*true*” and will return the appropriate message according to the value of `\g__enumext_item_answer_diff_int` set by the function `__enumext_item_answer_diff:`.

```

2372 \cs_new_protected:Nn \__enumext_check_ans_show:
2373 {
2374   \int_case:nn { \g__enumext_item_answer_diff_int }
2375   {
2376     { -1 } { \__enumext_check_ans_msg_less: }
2377     { 0 } { \__enumext_check_ans_msg_same_ok: }
2378     { 1 } { \__enumext_check_ans_msg_greater: }
2379   }
2380 }
2381 \cs_new_protected:Nn \__enumext_check_ans_msg_less:
2382 {
2383   \msg_warning:nnee { enumext } { item-less-answer } { \g__enumext_store_name_tl }
2384   { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2385 }
2386 \cs_new_protected:Nn \__enumext_check_ans_msg_same_ok:
2387 {
2388   \msg_term:nnee { enumext } { items-same-answer } { \g__enumext_store_name_tl }
2389   { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2390 }
2391 \cs_new_protected:Nn \__enumext_check_ans_msg_greater:
2392 {
2393   \msg_warning:nnee { enumext } { item-greater-answer } { \g__enumext_store_name_tl }
2394   { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2395 }

```

(End of definition for `__enumext_check_ans_show:` and others.)

`__enumext_check_ans_log:`
`__enumext_check_ans_log_msg_less:`
`__enumext_check_ans_log_msg_same_ok:`
`__enumext_check_ans_log_msg_greater:`

The function `__enumext_check_ans_log:` will be executed within the function `__enumext_execute_after_env:` when the key `check-ans` is not active, that is, when `\g__enumext_check_ans_key_bool` is “*false*” and write in the log the appropriate message according to the value of `\g__enumext_item_answer_diff_int` set by the function `__enumext_item_answer_diff:`.

```

2396 \cs_new_protected:Nn \__enumext_check_ans_log:
2397 {
2398   \int_case:nn { \g__enumext_item_answer_diff_int }

13.27.6 Check for `\item*` and `\anspic*` commands

`__enumext_check_starred_cmd:n`

The function `__enumext_check_starred_cmd:n` performs an *extra check* for the `keyans`, `keyans*` and `keyanspic` environments. Unlike the *check* executed by `check-ans` key this one is not controlled by any key, it is intended to prevent the forgetting of `\item*` or `\anspic*` in these environments.

```

2420 \cs_new_protected:Npn \__enumext_check_starred_cmd:n #1
2421 {
2422   \int_compare:nNtT
2423   { \g__enumext_check_starred_cmd_int } = { 0 }

```

```

2432         { enumext } { many-starred }{ #1 } \__enumext_check_start_line_env_tl
2433     }
2434     \int_gzero:N \g__enumext_check_starred_cmd_int
2435     \tl_clear:N \l__enumext_check_start_line_env_tl
2436 }

```

(End of definition for `__enumext_check_starred_cmd:n`.)

13.28 Keys and functions associated with storage

13.28.1 Keys for marks, wrap and show

The `enumext` package provides a set of *keys* for manipulating “symbol marks” associated with “answers” and how they are displayed and stored in the *sequence* and *prop list* as well as an internal “label and ref” system.

For the `keyans` and `keyans*` environments we will only add the keys `mark-ans*`, `mark-pos*`, `mark-sep*`, `wrap-ans*`, `wrap-opt`, `save-sep`, `show-ans` and `show-pos`.

```

2437 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
2438 {
2439     \keys_define:nn { enumext / #1 }
2440     {
2441         mark-ans* .tl_set:c = { \__enumext_mark_answer_sym_#2_tl },
2442         mark-ans* .initial:n = \textasteriskcentered,
2443         mark-ans* .value_required:n = true,
2444         mark-pos* .choice:,
2445         mark-pos* / left .code:n = \str_set:cn { \__enumext_mark_position_#2_str } { l },
2446         mark-pos* / right .code:n = \str_set:cn { \__enumext_mark_position_#2_str } { r },
2447         mark-pos* / center .code:n = \str_set:cn { \__enumext_mark_position_#2_str } { c },
2448         mark-pos* / unknown .code:n =
2449             \msg_error:nnee { enumext } { unknown-choice }
2450             { mark-pos } { left,~right,~center } { \exp_not:n {##1} },
2451         mark-pos* .initial:n = right,
2452         mark-pos* .value_required:n = true,
2453         mark-sep* .dim_set:c = { \__enumext_mark_sym_sep_#2_dim },
2454         mark-sep* .value_required:n = true,
2455         wrap-ans* .cs_set_protected:cp = { \__enumext_keyans_wrapper_item_#2:n } ##1,
2456         wrap-ans* .value_required:n = true,
2457         wrap-opt .cs_set_protected:cp = { \__enumext_keyans_wrapper_opt_#2:n } ##1,
2458         wrap-opt .initial:n = [{##1}],
2459         wrap-opt .value_required:n = true,
2460         save-sep .tl_set:c = { \__enumext_store_keyans_item_opt_sep_#2_tl },
2461         save-sep .initial:n = {,~},
2462         save-sep .value_required:n = true,
2463         show-ans .bool_set:N = \__enumext_show_answer_bool,

```

(End of definition for *mark-ref* and others.)

13.28.2 Storing structure of the environments

The idea behind “*storing structure*” in the *sequence* is to have a copy of the *structure of the environment* in which the key *save-ans* is being executed so we must capture the *optional argument* passed to the levels of

the environment in which it is executed and “*storing*” this in the *sequence*.

```

__enumext_store_active_keys:n
__enumext_store_active_keys_vii:n

```

The functions `__enumext_store_active_keys:n` and `__enumext_store_active_keys_vii:n` will be responsible for the “*storing keys*” filtered from the *optional argument* of the environment in which the key `save-ans` is executed and the levels within this for the `enumext` and `enumext*` environments. We will execute this function only if the variable `__enumext_store_save_key_X_bool` is false, that is, the key `store-key` is not active, establishing the variable `__enumext_store_save_key_X_tl` with the filtered *keys*.

```

2542 \cs_new_protected:Npn __enumext_store_active_keys:n #1
2543 {
2544   \bool_if:cF { __enumext_store_save_key_ __enumext_level: _bool }
2545   {
2546     \tl_clear:c { __enumext_store_save_key_ __enumext_level: _tl }
2547     \tl_set:ce
2548       { __enumext_store_save_key_ __enumext_level: _tl }
2549       { __enumext_filter_save_key:n {#1} }
2550   }
2551 }
2552 \cs_new_protected:Npn __enumext_store_active_keys_vii:n #1
2553 {
2554   \bool_if:NF __enumext_store_save_key_vii_bool
2555   {
2556     \tl_clear:N __enumext_store_save_key_vii_tl
2557     \tl_set:Ne __enumext_store_save_key_vii_tl { __enumext_filter_save_key:n {#1} }
2558   }
2559 }

```

(End of definition for `__enumext_store_active_keys:n` and `__enumext_store_active_keys_vii:n`.)

13.28.3 Setting save-key key

Since this “*storing structure*” in the *sequence* established by the `save-ans` key when executing `\anskey` or `anskey*`, we will not be able to modify it. The best thing here is to have a key that allows you to modify the *optional argument* of the “*storing structure*” in the *sequence*.

save-key

The values set by this key passed in the *optional argument* of the `enumext` and `enumext*` environments will override the values of the `__enumext_store_save_key_X_tl` variable set by the functions `__enumext_store_active_keys:n` and `__enumext_store_active_keys_vii:n`. Now define the key `save-key` for all levels of `enumext` and `enumext*` environments.

```

2560 \cs_set_protected:Npn __enumext_tmp:n #1
2561 {
2562   \keys_define:nn { enumext / enumext* }
2563   {
2564     save-key .code:n = __enumext_parse_save_key_vii:n {##1},
2565     save-key .value_required:n = true,
2566   }
2567   \keys_define:nn { enumext / #1 }
2568   {
2569     save-key .code:n = __enumext_parse_save_key:n {##1},
2570     save-key .value_required:n = true,
2571   }
2572 }
2573 \clist_map_inline:nn { level-1, level-2, level-3, level-4 } { __enumext_tmp:n {#1} }

```

(End of definition for `save-key`.)

```

__enumext_parse_save_key:n
__enumext_parse_save_key_vii:n

```

The functions `__enumext_parse_save_key:n` and `__enumext_parse_save_key_vii:n` will be responsible for “*storing keys*” in the variable `__enumext_store_save_key_X_tl` for `enumext` and `enumext*`.

```

2574 \cs_new_protected:Npn __enumext_parse_save_key:n #1
2575 {
2576   \bool_set_true:c { __enumext_store_save_key_ __enumext_level: _bool }
2577   \tl_clear:c { __enumext_store_save_key_ __enumext_level: _tl }
2578   \tl_set:ce
2579     { __enumext_store_save_key_ __enumext_level: _tl }
2580     { __enumext_filter_save_key:n {#1} }
2581 }
2582 \cs_new_protected:Npn __enumext_parse_save_key_vii:n #1
2583 {
2584   \bool_set_true:N __enumext_store_save_key_vii_bool
2585   \tl_clear:N __enumext_store_save_key_vii_tl
2586   \tl_set:Ne __enumext_store_save_key_vii_tl { __enumext_filter_save_key:n {#1} }
2587 }

```

(End of definition for `__enumext_parse_save_key:n` and `__enumext_parse_save_key_vii:n`.)

13.28.4 Internal functions to store optional arguments

The function `__enumext_filter_save_key:n` will be in charge of “filtering keys” we want to stored in *sequence* where `{#1}` represents the *optional argument* passed to the environment.

```

2588 \cs_new:Npn \__enumext_filter_save_key:n #1
2589 {
2590   \use:e
2591   {
2592     \keyval_parse:NNn
2593     \__enumext_filter_save_key_key:n
2594     \__enumext_filter_save_key_pair:nn {#1}
2595   }
2596 }
```

The function `__enumext_filter_save_key_key:n` will be responsible for “filtering keys” that are passed “without value” by excluding the `resume`, `resume*`, `no-store` and `base-fix` keys.

```

2597 \cs_new:Npn \__enumext_filter_save_key_key:n #1
2598 {
2599   \str_case:nnF {#1}
2600   {
2601     { resume } {} { resume* } {} { no-store } {} { base-fix } {}
2602   }
2603   { , { \exp_not:n {#1} } }
2604 }
```

The function `__enumext_filter_save_key_pair:nn` will be responsible for “filtering keys” that are passed “with value” by excluding the `series`, `resume`, `save-ans`, `save-ref`, `save-key`, `check-ans`, `show-ans`, `save-pos`, `mark-ans`, `mark-pos`, `mark-sep`, `wrap-ans`, `mark-ans*`, `mark-pos*`, `mark-sep*`, `wrap-ans*`, `wrap-opt`, `save-sep`, `mark-ref`, `mini-env`, `mini-sep`, `mini-right` and `mini-right*` keys.

```

2605 \cs_new:Npn \__enumext_filter_save_key_pair:nn #1#2
2606 {
2607   \str_case:nnF {#1}
2608   {
2609     { series } {} { resume } {} { save-ans } {} { save-ref } {}
2610     { save-key } {} { check-ans } {} { show-ans } {} { show-pos } {}
2611     { mark-ans } {} { mark-pos } {} { mark-sep } {} { wrap-ans } {}
2612     { mark-ans* } {} { mark-pos* } {} { mark-sep* } {} { wrap-ans* } {}
2613     { wrap-opt } {} { save-sep } {} { mark-ref } {} { mini-env } {}
2614     { mini-sep } {} { mini-right } {} { mini-right* } {}
2615   }
2616   { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
2617 }
```

(End of definition for `__enumext_filter_save_key:n`, `__enumext_filter_save_key_key:n`, and `__enumext_filter_save_key_pair:nn`.)

13.28.5 Function for storing content in prop list

The function `__enumext_store_addto_prop:n` stores the `{⟨content⟩}` in *prop list* defined by `save-ans` key. The “stored content” is retrieved by means of the `\getkeyans` command.

The form in which the `{⟨content⟩}` is “stored” in the *prop list* is `{⟨position⟩}{⟨content⟩}`. This function is used by `\anskey` in `enumext` and `enumext*` environments, `\item*` in `keyans` and `keyans*` environments and `\anspic*` in `keyanspic` environment.

```

2618 \cs_new_protected:Npn \__enumext_store_addto_prop:n #1
2619 {
2620   \prop_gput_if_not_in:cen { g__enumext_ \__enumext_store_name_tl _prop }
2621   {
2622     \int_eval:n { \prop_count:c { g__enumext_ \__enumext_store_name_tl _prop } + 1 }
2623   }
2624   { #1 }
2625 }
2626 \cs_generate_variant:Nn \__enumext_store_addto_prop:n { V }
```

(End of definition for `__enumext_store_addto_prop:n`.)

13.28.6 Function for storing content in sequence

The function `__enumext_store_addto_seq:n` stores the $\{\langle content \rangle\}$ in *sequence* defined by `save-ans` key. This function is used by `\anskey` in `enumext`, `\item*` in `keyans` and `\anspic` in `keyanspic`.

The form in which the $\{\langle content \rangle\}$ is stored in *sequence* is in a internal `enumext` or `enumext*` environments with the “*same structure*” in which the command was executed.

The “*stored content*” is retrieved by means of the `\printkeyans` command.

```
2627 \cs_new_protected:Npn \__enumext_store_addto_seq:n #1
2628 {
2629     \seq_gput_right:cn { g__enumext_ \__enumext_store_name_tl _seq } { #1 }
2630 }
2631 \cs_generate_variant:Nn \__enumext_store_addto_seq:n { v, V }
```

(End of definition for `__enumext_store_addto_seq:n`.)

13.28.7 Functions for storing structure in the sequence

The “*storing structure*” is handled by the functions `__enumext_store_level_open:` and `__enumext_store_level_close:` which are executed per level within the `enumext` environment.

```
2632 \cs_new_protected:Nn \__enumext_store_level_open:
2633 {
2634     \bool_if:NT \__enumext_check_answers_bool
2635     {
2636         \tl_if_empty:cTF { l__enumext_store_save_key_ \__enumext_level: _tl }
2637         {
2638             \__enumext_store_addto_seq:n
2639             {
2640                 \item \begin{enumext}
2641             }
2642         }
2643         {
2644             \tl_put_left:cn { l__enumext_store_save_key_ \__enumext_level: _tl }
2645             {
2646                 \item \begin{enumext} [
2647             }
2648             \tl_put_right:cn { l__enumext_store_save_key_ \__enumext_level: _tl }
2649             {
2650                 ]
2651             }
2652             \__enumext_store_addto_seq:v { l__enumext_store_save_key_ \__enumext_level: _tl }
2653         }
2654     }
2655 }
2656 \cs_new_protected:Nn \__enumext_store_level_close:
2657 {
2658     \bool_if:NT \__enumext_check_answers_bool
2659     {

2703         }
2704     }
2705     \skip_horizontal:n { \dim_use:N #2 }
2706 }
2707 \cs_generate_variant:Nn \__enumext_print_keyans_box:NN { cc }

```

(End of definition for __enumext_print_keyans_box:NN.)

13.29 The internal label and ref

The function `__enumext_store_internal_ref:` handles the “*internal label and ref*” system used by the `save-ref` and `mark-ref` keys for `\anskey` will allow to execute `\ref{⟨store name : position⟩}` and will return `1.(a).i.A.`

```

\__enumext_store_internal_ref:

```

First we will remove the dots “.” from the current `⟨labels⟩`, we do not want to get double dots in our references, then we will place this in the variable `\l__enumext_newlabel_arg_two_tl`.

```

2708 \cs_new_protected:Nn \__enumext_store_internal_ref:
2709 {
2710     \cs_set_protected:Npn \__enumext_tmp:n ##1
2711     {
2712         \tl_set_eq:cc { \l__enumext_label_copy_##1_tl } { \l__enumext_label_##1_tl }
2713         \tl_reverse:c { \l__enumext_label_copy_##1_tl }
2714         \tl_remove_once:cn { \l__enumext_label_copy_##1_tl } { . }
2715         \tl_reverse:c { \l__enumext_label_copy_##1_tl }
2716     }
2717     \clist_map_inline:nn { i, ii, iii, iv, vii } { \__enumext_tmp:n {##1} }
2718     \cs_set:Npn \__enumext_tmp:n ##1
2719     { . \tl_use:c { \l__enumext_label_copy_ \int_to_roman:n {##1} _tl } }

```

Here we need to analyse the cases where the environment is started with `enumext*` and if `\anskey` or `anskey*` is running alone in it or if it is running in a nested `enumext` environment within the starting environment.

```

2720     \bool_lazy_all:nT
2721     {
2722         { \bool_if_p:N \g__enumext_starred_bool }
2723         { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
2724     }
2725     {
2726         \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2727         { \tl_use:N \l__enumext_label_copy_vii_tl }

```

```

2728     }
2729     \bool_lazy_all:nT
2730     {
2731         { \bool_not_p:n { \g__enumext_standar_bool } }
2732         { \bool_if_p:N \l__enumext_standar_bool }
2733         { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } } }
2734     }
2735     {
2736         \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2737         {
2738             \tl_use:N \l__enumext_label_copy_vii_tl
2739             \int_step_function:nnN { 1 } { \l__enumext_level_int } \l__enumext_tmp:n
2740         }
2741     }

```

If started with `enumext` and if `\anskey` or `anskey*` is running alone in it or if it is running in a nested `enumext*` environment within the starting environment.

```

2742     \bool_lazy_all:nT
2743     {
2744         { \bool_if_p:N \g__enumext_standar_bool }
2745         { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
2746         { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } } }
2747     }
2748     {
2749         \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2750         {
2751             \tl_use:N \l__enumext_label_copy_i_tl
2752             \int_step_function:nnN { 2 } { \l__enumext_level_int } \l__enumext_tmp:n
2753         }
2754     }
2755     \cs_set:Npn \l__enumext_tmp:n ##1
2756     { \tl_use:c { l__enumext_label_copy_ \int_to_roman:n {##1} _tl } . }
2757     \bool_lazy_all:nT
2758     {
2759         { \bool_if_p:N \g__enumext_standar_bool }
2760         { \bool_if_p:N \l__enumext_starred_bool }
2761         { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } } }
2762     }
2763     {
2764         \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2765         {
2766             \int_step_function:nnN { 1 } { \l__enumext_level_int } \l__enumext_tmp:n
2767             \tl_use:N \l__enumext_label_copy_vii_tl
2768         }
2769     }

```

Now we set the variable `\l__enumext_newlabel_arg_one_tl` which will contain $\langle \textit{store name} : \textit{position} \rangle$.

```

2770     \tl_put_right:Ne \l__enumext_newlabel_arg_one_tl
2771     {
2772         \l__enumext_store_name_tl \c_colon_str
2773         \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } }
2774     }

```

Now execute the function `\l__enumext_newlabel:nn` and save the result in the variable `\l__enumext_write_aux_file_tl` and finally we write in the `.aux` file.

```

2775     \tl_put_right:Ne \l__enumext_write_aux_file_tl
2776     {
2777         \l__enumext_newlabel:nn
2778         { \exp_not:V \l__enumext_newlabel_arg_one_tl }
2779         { \l__enumext_newlabel_arg_two_tl }
2780     }
2781     \l__enumext_write_aux_file_tl
2782 }

```

(End of definition for `\l__enumext_store_internal_ref:.`)

13.30 Common functions for `\anskey` and `anskey*` environment

`\l__enumext_store_anskey_arg:n`

The internal function `\l__enumext_store_anskey_arg:n` first we pass the $\langle \textit{argument} \rangle$ to the *prop list*, then checks the state of the variable `\l__enumext_store_ref_key_bool` handled by the *save-ref* key and will call the function `\l__enumext_store_internal_ref:` for the “*internal label and ref*” system. Followed by this if the *show-ans* or *show-pos* keys are active we will show the “*wrapped*” $\langle \textit{argument} \rangle$.

```

2783 \cs_new_protected:Npn \__enumext_store_anskey_arg:n #1
2784 {
2785   \int_gincr:N \g__enumext_item_anskey_int
2786   \__enumext_store_addto_prop:n {#1}
2787   \bool_if:NT \l__enumext_store_ref_key_bool
2788   {
2789     \__enumext_store_internal_ref:
2790   }
2791   \__enumext_anskey_show_wrap_left:n { #1 }

```

Now we start processing the $\langle key = val \rangle$ passed to the command to build our $\backslash item$ in the variable $\backslash l_enumext_store_anskey_arg_tl$ which we will “store” in the *sequence*. First we clear the variable $\backslash l_enumext_store_anskey_arg_tl$ and process the $\langle keys \rangle$, if the `break-col` key is present and the command is running under `enumext` (not in `enumext*`) we will add $\backslash columnbreak$ and then $\backslash item$.

```

2792 \tl_clear:N \l__enumext_store_anskey_arg_tl
2793 \bool_lazy_and:nnT
2794 { \bool_if_p:N \l__enumext_store_columns_break_bool }
2795 { \bool_not_p:n { \l__enumext_starred_bool } }
2796 {
2797   \tl_put_left:Nn \l__enumext_store_anskey_arg_tl { \columnbreak }
2798 }
2799 \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { \item }

```

If the `item-join` key is present and the command is running under `enumext*` we will add $\langle (number) \rangle$ to $\backslash l_enumext_store_anskey_arg_tl$.

```

2800 \bool_lazy_and:nnT
2801 { \bool_not_p:n { \l__enumext_starred_bool } }
2802 { \int_compare_p:nNn { \l__enumext_store_item_join_int } > { 1 } }
2803 {
2804   \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2805   {
2806     ( \exp_not:V \l__enumext_store_item_join_int )
2807   }
2808 }

```

And now we will review the keys `item-star`, `item-sym*` and `item-pos*` and pass them to $\backslash l_enumext_store_anskey_arg_tl$ along with the $\langle (argument) \rangle$ for $\backslash anskey$ or $\langle (body) \rangle$ for `anskey*`.

```

2809 \bool_if:NTF \l__enumext_store_item_star_bool
2810 {
2811   \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { * }
2812   \tl_if_empty:NF \l__enumext_store_item_symbol_tl
2813   {
2814     \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2815     {
2816       [ \exp_not:V \l__enumext_store_item_symbol_tl ]
2817     }
2818   }
2819   \dim_compare:nT
2820   {
2821     \l__enumext_store_item_symbol_sep_dim != \c_zero_dim
2822   }
2823   {
2824     \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2825     {
2826       [ \exp_not:V \l__enumext_store_item_symbol_sep_dim ]
2827     }
2828   }
2829   \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#1}
2830 }
2831 {
2832   \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#1}
2833 }

```

Finally we check if the `save-ref` key are active along with the `hyperref` package load, if both conditions are met, it will create the $\backslash hyperlink$ with “symbol” set by `mark-ref` key and then store in *sequence*.

```

2834 \bool_lazy_and:nnT
2835 { \bool_if_p:N \l__enumext_store_ref_key_bool }
2836 { \bool_if_p:N \l__enumext_hyperref_bool }
2837 {
2838   \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2839   {
2840     \hfill \exp_not:N \hyperlink { \exp_not:V \l__enumext_newlabel_arg_one_tl }

```

```

2841         { \exp_not:V \l__enumext_mark_ref_sym_tl }
2842     }
2843 }
2844 \__enumext_store_addto_seq:V \l__enumext_store_anskey_arg_tl
2845 }

```

(End of definition for `__enumext_store_anskey_arg:n`.)

`__enumext_anskey_show_wrap_arg:n`

The function `__enumext_anskey_show_wrap_arg:n` “wraps” the $\langle argument \rangle$ passed to `\anskey` and the $\langle body \rangle$ for `anskey*` when using the `wrap-ans` and `wrap-sep` keys.

```

2846 \cs_new_protected:Npn \__enumext_anskey_show_wrap_arg:n #1
2847 {
2848     \par
2849     \bool_if:NTF \l__enumext_starred_bool

2887             ]
2888             \group_end:
2889         }
2890         \__enumext_anskey_show_wrap_arg:n { #1 }
2891     }
2892 }

```

(End of definition for `__enumext_anskey_show_wrap_left:n`.)

13.31 The command \anskey

Since we will be “*storing content*” in a `list` environment within *sequences* and can (more or less) manage the options passed to each level, it is necessary that we have a little more control over `\item` when storing.

The `\anskey` command will cover this point and give it similar behaviour to that of `\item` in the `enumext` and `enumext*` environments executed as follows `\anskey[⟨key = val⟩]{⟨content⟩}`.

First we'll add the keys `break-col`, `item-join`, `item-star`, `item-sym*` and `item-pos*`.

```
break-col
item-join
item-star
item-sym*
item-pos*
unknown
\__enumext_anskey_unknown:n
\__enumext_anskey_unknown:n
2893 \keys_define:nn { enumext / anskey }
2894 {
2895     break-col .bool_set:N = \l__enumext_store_columns_break_bool,
2896     break-col .default:n = true,
2897     break-col .value_forbidden:n = true,
2898     item-join .int_set:N = \l__enumext_store_item_join_int,
2899     item-join .value_required:n = true,
2900     item-star .bool_set:N = \l__enumext_store_item_star_bool,
2901     item-star .default:n = true,
2902     item-star .value_forbidden:n = true,
2903     item-sym* .tl_set:N = \l__enumext_store_item_symbol_tl,
2904     item-sym* .value_required:n = true,
2905     item-pos* .dim_set:N = \l__enumext_store_item_symbol_sep_dim,
2906     item-pos* .value_required:n = true,
2907     unknown .code:n = { \__enumext_anskey_unknown:n {#1} },
2908 }
```

The `⟨keys⟩` are stored in `\l_keys_key_str` and the value (if any) is passed as an argument to the function `__enumext_anskey_unknown:n`.

```
2909 \cs_new_protected:Npn \__enumext_anskey_unknown:n #1
2910 {
2911     \exp_args:NV \__enumext_anskey_unknown:nn \l_keys_key_str {#1}
2912 }
2913 \cs_new_protected:Npn \__enumext_anskey_unknown:nn #1 #2
2914 {
2915     \tl_if_blank:nTF {#2}
2916     {

2977   }
2978 }

```

(End of definition for `__enumext_anskey_safe_outer:` and `__enumext_anskey_safe_inner:`.)

13.32 The environment `anskey*`

The original implementation of the `anskey*` environment used non-public functions from the `scontents`[4] package, which was not the best approach. Fortunately L^AT_EX release 2025-06-01 implemented the new `c`-type argument in the `ltxcmd`[13], with which we can record the *(body)* of the environment in *verbatim mode* and, together with `\scantokens` do the work as the original implementation.

```

break-col
item-join
item-star
item-sym*
item-pos*
force-eol
write-env
overwrite
unknown

```

First we add the same keys from the `\anskey` command along with the `force-eol`, `write-env` and `overwrite` keys that were in the original implementation that used the `scontents` support package for these.

```

2979 \keys_define:nn { enumext / anskey* }
2980 {
2981   break-col .bool_set:N = \l__enumext_store_columns_break_bool,
2982   break-col .default:n = true,
2983   break-col .value_forbidden:n = true,
2984   item-join .int_set:N = \l__enumext_store_item_join_int,
2985   item-join .value_required:n = true,
2986   item-star .bool_set:N = \l__enumext_store_item_star_bool,
2987   item-star .default:n = true,
2988   item-star .value_forbidden:n = true,
2989   item-sym* .tl_set:N = \l__enumext_store_item_symbol_tl,
2990   item-sym* .value_required:n = true,
2991   item-pos* .dim_set:N = \l__enumext_store_item_symbol_sep_dim,

```

```

2992     item-pos* .value_required:n = true,
2993     force-eol .bool_set:N = \l__enumext_anskey_env_force_eol_bool,
2994     force-eol .initial:n = false,
2995     force-eol .default:n = true,

3068         \__enumext_store_anskey_env:n {#2}
3069       }
3070     }
3071   } { }

```

(End of definition for `anskey*`. This function is documented on page 15.)

13.32.1 Internal functions for the environment

`__enumext_anskey_env_safe_outter:` The function `__enumext_store_anskey_safe_outter:` will return the appropriate messages when `anskey*` is executed outside the environment in which the `save-ans` key was activated or within the `keyans`, `keyans*` or `keyanspic` environments.

```

3072   \cs_new_protected:Nn \__enumext_anskey_env_safe_outter:
3073   {
3074     \bool_if:NF \__enumext_store_active_bool
3075     {
3076       \msg_error:nnn { enumext } { anskey-env-error } { anskey* }
3077     }
3078     \int_compare:nNt { \__enumext_keyans_level_int } = { 1 }
3079     {
3080       \msg_error:nnn { enumext } { anskey-env-wrong } { keyans }
3081     }
3082     \int_compare:nNt { \__enumext_keyans_level_h_int } = { 1 }
3083     {
3084       \msg_error:nnn { enumext } { anskey-env-wrong } { keyans* }
3085     }
3086     \int_compare:nNt { \__enumext_keyans_pic_level_int } = { 1 }
3087     {
3088       \msg_error:nnn { enumext } { anskey-env-wrong } { keyanspic }
3089     }
3090   }

```

The function `__enumext_anskey_env_safe_inner:` will first check if preceded by a not numbered `\item` or if it is in *math mode* returning the appropriate messages.

```

3091   \cs_new_protected:Nn \__enumext_anskey_env_safe_inner:
3092   {
3093     \bool_if:NF \__enumext_item_number_bool
3094     {
3095       \msg_error:nn { enumext } { anskey-unnumber-item }
3096     }
3097     \mode_if_math:T
3098     {
3099       \msg_error:nnn { enumext } { anskey-math-mode } { anskey* }
3100     }
3101   }

```

The `__enumext_store_anskey_env:n` function will first pass the argument `c` (*body*) to the variable `\l__enumext_store_anskey_env_tl` and replace the macro `\obeyedline` with `^^J` and then execute the `write-env` and `overwrite` keys, check the state of the variable `\l__enumext_anskey_env_force_eol_bool` managed by the `force-eol` key and we will add `\c__enumext_anskey_env_hidden_space_str` if necessary. Finally we will use `\exp_args:N` on the `__enumext_store_anskey_arg:n` to expand the `__enumext_scan_tokens:n` function which rescans the `\l__enumext_store_anskey_env_tl` variable before processing it.

```

3102 \cs_new_protected:Npn \__enumext_store_anskey_env:n #1
3103 {
3104   \tl_set:Nn \l__enumext_store_anskey_env_tl {#1}
3105   \RenewDocumentCommand \obeyedline { } { \iow_char:N ^^J }
3106   \tl_replace_all:Nee \l__enumext_store_anskey_env_tl { \obeyedline } { \iow_char:N ^^J }
3107   \__enumext_anskey_env_file_write:VV
3108   \l__enumext_write_anskey_env_file_name_tl \l__enumext_store_anskey_env_tl
3109   \bool_if:NF \l__enumext_anskey_env_force_eol_bool
3110   {
3111     \tl_put_right:Nc \l__enumext_store_anskey_env_tl
3112       {
3113         \c__enumext_anskey_env_hidden_space_str
3114       }
3115   }
3116   \exp_args:N
3117   \__enumext_store_anskey_arg:n
3118   {
3119     \__enumext_scan_tokens:n { \l__enumext_store_anskey_env_tl }
3120   }
3121 }

```

Since `\obeyedline` can be redefined by the user, for example to `\mbox{} \par`, it is necessary to redefine it to `^^J` in order to use `\tl_replace_all:Nee` otherwise it returns an error.

(End of definition for `__enumext_anskey_env_safe_outer:`, `__enumext_anskey_env_safe_inner:`, and `__enumext_store_anskey_env:n`.)

13.33 Executing check-ans system and write .log

`__enumext_execute_after_env:`

The `__enumext_execute_after_env:` function will first return the appropriate message for the end of the environment in which the `save-ans` key is being executed, then call the `__enumext_item_answer_diff:` function and then will write the values of the global variables used to the `.log` file. If the key `check-ans` is active it will execute the function `__enumext_check_ans_show:` and show the result in the terminal, otherwise it will execute the function `__enumext_check_ans_log:` and write the results in the `.log` file and finally we execute the function `__enumext_reset_global_vars:` returning the used variables to their original state.

```

3122 \cs_new_protected:Nn \__enumext_execute_after_env:
3123 {
3124   \int_compare:nNnT { \l__enumext_level_int } = { 0 }
3125   {
3126     \tl_if_empty:NF \g__enumext_store_name_tl
3127     {
3128       \__enumext_stop_save_ans_msg:
3129       \__enumext_item_answer_diff:
3130       \__enumext_log_global_vars:
3131       \__enumext_log_answer_vars:
3132       \bool_if:NTF \g__enumext_check_ans_key_bool
3133       {
3134         \__enumext_check_ans_show:
3135       }
3136       { \__enumext_check_ans_log: }
3137     }
3138     \__enumext_reset_global_vars:
3139   }
3140 }

```

This function is passed to the function `__enumext_after_env:nn` for the environments `enumext` (§13.40) and `enumext*` (§13.45) and it is executed only when the environments are not nested or at some level of these..

(End of definition for `__enumext_execute_after_env:`.)

13.34 Common functions for keyans, keyans* and keyanspic

13.34.1 Storing content in prop list

`__enumext_keyans_addto_prop:n`

The function `__enumext_keyans_addto_prop:n` will pass the the current $\langle label \rangle$ for `\item*` in `keyans` environment and the current $\langle label \rangle$ for `\anspic*` in `keyanspic` environment followed by the $\langle contents \rangle$ of the *optional argument* of both commands to the `__enumext_store_current_label_tl` variable, which will be stored to the *prop list* defined by the `save-ans` key using the function `__enumext_store_addto_prop:V`.

```

3141 \cs_new_protected:Npn \__enumext_keyans_addto_prop:n #1
3142 {
3143   \tl_clear:N \__enumext_store_current_label_tl
3144   \int_compare:nNnTF { \__enumext_keyans_pic_level_int } = { 1 }
3145   {
3146     \tl_put_right:Ne \__enumext_store_current_label_tl { \__enumext_label_vi_tl }
3147   }
3148   {
3149     \tl_put_right:Ne \__enumext_store_current_label_tl { \__enumext_label_v_tl }
3150   }

```

If the *optional argument* is present and the `save-sep` key is not empty, we save it.

```

3151   \tl_if_novalue:nF { #1 }
3152   {
3153     \tl_if_empty:NF \__enumext_store_keyans_item_opt_sep_v_tl
3154     {
3155       \tl_put_right:NV \__enumext_store_current_label_tl \__enumext_store_keyans_item_opt_sep_v_tl
3156     }
3157     \tl_put_right:Nn \__enumext_store_current_label_tl { #1 }
3158   }
3159   \__enumext_store_addto_prop:V \__enumext_store_current_label_tl
3160 }

```

(End of definition for `__enumext_keyans_addto_prop:n`.)

13.34.2 The save-ref key for keyans, keyans* and keyanspic

The “*internal label and ref*” system for the `keyans`, `keyans*` and `keyanspic` environments has *slight differences* with the one implemented for `\anskey` basically because in this environments the interest is in the current $\langle label \rangle$ for `\item*` and `\anspic*` with the $\langle contents \rangle$ of the *optional argument*. The mechanism defined here will allow to execute `\ref{⟨store name : position⟩}` and will return `1.(A)`.

`__enumext_keyans_store_ref:`
`__enumext_keyans_store_ref_aux_i:`
`__enumext_keyans_store_ref_aux_ii:`

The function `__enumext_keyans_store_ref:` handles the “*internal label and ref*” system used by the `save-ref` key for `\item*` and `\anspic*` commands. First we will create copies of the current $\langle labels \rangle$ and remove the dots “.” from them, we do not want to get double dots in references.

```

3161 \cs_new_protected:Nn \__enumext_keyans_store_ref:
3162 {

13.35 Redefining `\item` and `\makeLabel` in enumext

Redefining the `\item` command is not as simple as I thought. This command works in conjunction with the `\makeLabel` command so I have to redefine both of them, in addition to this, we will have to use a couple of *global* variables to pass the values from one command to the other.

When *labeling* PDF is active `\makeLabel` is redefined as `\hss #1` and the only way to get the `align` key to work correctly is to redefine `\makeLabel` using `\makebox`. The best way to implement this is to use the conditional command `\IfDocumentMetadataTF` to force this redefinition and the dedicated `mode-box` key to manually activate it by the user.

The `\item` and `\item[⟨custom⟩]` commands work in the usual way on `enumext` and we will add `\item*`, `\item*[⟨symbol⟩]` and `\item*[⟨symbol⟩][⟨offset⟩]`.

```
\__enumext_default_item:n
```

First we will see if the *optional argument* is present, if it is NOT present we will check the state of the variable `\l__enumext_check_answers_bool` set by the key `no-store`, set the boolean variable `\l__enumext_wrap_label_X_bool` to “true” for the key `wrap-label` and execute `__enumext_item_std:w` and the key `itemindent`, otherwise we will check the state of the boolean variable `\l__enumext_wrap_label_opt_X_bool` set by the key `wrap-label*` and execute `__enumext_item_std:w` with the *optional argument* and the key `itemindent`.

```

3362 \cs_new_protected:Npn \__enumext_default_item:n #1
3363 {
3364     \tl_if_novalue:nTF {#1}
3365     {
3366         \bool_if:NT \l__enumext_check_answers_bool
3367         {
3368             \int_gincr:N \g__enumext_item_number_int
3369             \bool_set_true:N \l__enumext_item_number_bool
3370         }
3371         \bool_set_true:c { \l__enumext_wrap_label_ \__enumext_level: _bool }
3372         \__enumext_item_std:w \tl_use:c { \l__enumext_fake_item_indent_ \__enumext_level: _tl }
3373     }
3374     {

3478         \tl_gclear:N \g__enumext_item_symbol_aux_tl
3479       }
3480     } % close smash
3481   }
3482 }

```

(End of definition for `__enumext_make_label:`, `__enumext_make_label_std:`, and `__enumext_make_label_box:`.)

13.36 Setting `item-sym*` and `item-pos*` keys

In order to have a cleaner implementation of `\item*` for the `enumext` and `enumext*` environments it is best to define a couple of keys that allow us to control and set by default the `<symbol>` and its `<offset>`.

`item-sym*` Define and set `item-sym*` and `item-pos*` keys for `enumext` and `enumext*`.

```

item-pos*
3483 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
3484 {
3485   \keys_define:nn { enumext / #1 }
3486   {
3487     item-sym* .tl_set:c = { l__enumext_item_symbol_#2_tl },
3488     item-sym* .value_required:n = true,
3489     item-sym* .initial:n = {\textborn},
3490     item-pos* .dim_set:c = { l__enumext_item_symbol_sep_#2_dim },
3491     item-pos* .value_required:n = true,
3492   }
3493 }
3494 \clist_map_inline:nn
3495 {
3496   {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {enumext*}{vii}
3497 }
3498 { \__enumext_tmp:nn #1 }

```

(End of definition for `item-sym*` and `item-pos*`.)

13.37 Handling unknown keys

At this point in the code I already know that I will NOT add more *⟨keys⟩* for and since I have already been quite *paranoid and restrictive* with the definitions of environments and commands, the only thing left to do is do it with the *⟨keys⟩* (you have to be consistent in life).

Well, the paragraph above is not so real, after all I had to add more *⟨keys⟩* than I had planned, not everything turns out the way one thinks in life.

13.37.1 Handling unknown keys for keyans, keyans* and keyanspic

Define and set `unknown` key for `keyans`, `keyans*` and `keyanspic` environments. Here it is necessary to set `\l__enumext_envir_name_tl` in case an `unknown` key is passed using `\setenumext`.

```

unknown
\__enumext_keyans_unknown_keys:n
\__enumext_keyans_unknown_keys:nn
3499 \cs_set_protected:Npn \__enumext_tmp:n #1
3500 {
3501   \keys_define:nn { enumext / #1 }
3502   {
3503     unknown .code:n = {
3504       \tl_set:Nn \l__enumext_envir_name_tl {#1}
3505       \__enumext_keyans_unknown_keys:n {#1}
3506     },
3507   }
3508 }
3509 \clist_map_inline:nn { keyans, keyans*, keyanspic } { \__enumext_tmp:n {#1} }
```

Internal functions for handling `unknown` key.

```

3510 \cs_new_protected:Npn \__enumext_keyans_unknown_keys:n #1
3511 {
3512   \exp_args:NV \__enumext_keyans_unknown_keys:nn \l_keys_key_str {#1}
3513 }
3514 \cs_new_protected:Npn \__enumext_keyans_unknown_keys:nn #1#2
3515 {
3516   \tl_if_blank:nTF {#2}
3517   {
3518     \msg_error:nne { enumext } { keyans-unknown-key } {#1}
3519   }
3520   {
3521     \msg_error:nnee { enumext } { keyans-unknown-key-value } {#1} {#2}
3522   }
3523 }
```

(End of definition for `unknown`, `__enumext_keyans_unknown_keys:n`, and `__enumext_keyans_unknown_keys:nn`.)

13.37.2 Handling unknown keys for enumext*

Define and set `unknown` key for `enumext*` environment.

```

unknown
\__enumext_starred_unknown_keys:n
\__enumext_starred_unknown_keys:nn
3524 \keys_define:nn { enumext / enumext* }
3525 {
3526   unknown .code:n = { \__enumext_starred_unknown_keys:n {#1} },
3527 }
```

Internal functions for handling `unknown` key.

```

3528 \cs_new_protected:Npn \__enumext_starred_unknown_keys:n #1
3529 {
3530   \exp_args:NV \__enumext_starred_unknown_keys:nn \l_keys_key_str {#1}
3531 }
3532 \cs_new_protected:Npn \__enumext_starred_unknown_keys:nn #1#2
3533 {
3534   \tl_if_blank:nTF {#2}
3535   {
3536     \msg_error:nnn { enumext } { starred-unknown-key } {#1}
3537   }
3538   {
3539     \msg_error:nnnn { enumext } { starred-unknown-key-value } {#1} {#2}
3540   }
3541 }
```

(End of definition for `unknown`, `__enumext_starred_unknown_keys:n`, and `__enumext_starred_unknown_keys:nn`.)

13.37.3 Handling unknown keys for enumext

unknown Defines and set the key `unknown` for `enumext` environment.

```

3542 \cs_set_protected:Npn \__enumext_tmp:n #1
3543 {
3544   \keys_define:nn { enumext / #1 }
3545   {
3546     unknown .code:n = { \__enumext_standar_unknown_keys:n {##1} },
3547   }
3548 }
3549 \clist_map_inline:nn { level-1,level-2,level-3,level-4 } { \__enumext_tmp:n {#1} }

```

Internal functions for handling `unknown` key.

```

3550 \cs_new_protected:Npn \__enumext_standar_unknown_keys:n #1
3551 {
3552   \exp_args:NV \__enumext_standar_unknown_keys:nn \l_keys_key_str {#1}
3553 }
3554 \cs_new_protected:Npn \__enumext_standar_unknown_keys:nn #1#2
3555 {
3556   \tl_if_blank:nTF {#2}
3557   {
3558     \msg_error:nnn { enumext } { standar-unknown-key } {#1}
3559   }
3560   {
3561     \msg_error:nnnn { enumext } { standar-unknown-key-value } {#1} {#2}
3562   }
3563 }

```

(End of definition for `unknown`, `__enumext_standar_unknown_keys:n`, and `__enumext_standar_unknown_keys:nn`.)

13.38 Redefining `\item` and `\makeLabel` in keyans

The `\item` and `\item[⟨custom⟩]` commands work in the usual way in `keyans`, but the `\item*` and `\item*[⟨content⟩]` commands *store* the current `⟨label⟩` next to the `⟨content⟩` if it is present in the *sequence* and *prop list* defined by `save-ans` key.

`__enumext_keyans_default_item:n` The function `__enumext_keyans_default_item:n` executes the original behavior of the `\item` along with the keys `wrap-label`, `wrap-label*` and `itemindent`.

```

3564 \cs_new_protected:Npn \__enumext_keyans_default_item:n #1
3565 {
3566   \tl_if_novalue:nTF { #1 }
3567   {
3568     \bool_set_true:N \__enumext_wrap_label_v_bool
3569     \__enumext_item_std:w \tl_use:N \__enumext_fake_item_indent_v_tl
3570   }
3571   {
3572     \bool_set_eq:NN \__enumext_wrap_label_v_bool \__enumext_wrap_label_opt_v_bool
3573     \__enumext_item_std:w [#1] \tl_use:N \__enumext_fake_item_indent_v_tl
3574   }
3575 }

```

(End of definition for `__enumext_keyans_default_item:n`.)

`__enumext_keyans_starred_item:n` The function `__enumext_keyans_starred_item:n` will take as argument `#1` the *optional argument* `[⟨content⟩]` passed to `\item*` and save it via the `__enumext_keyans_save_item_opt:n` function, then activate the `wrap-label` key, execute `\item` using `__enumext_item_std:w`, the `itemindent` key and print the *optional argument* using the `__enumext_keyans_show_item_opt:` function handled by the `wrap-opt` key.

```

3576 \cs_new_protected:Npn \__enumext_keyans_starred_item:n #1
3577 {
3578   \__enumext_keyans_save_item_opt:n { #1 }
3579   \bool_set_true:N \__enumext_wrap_label_v_bool
3580   \__enumext_item_std:w \tl_use:N \__enumext_fake_item_indent_v_tl
3581   \__enumext_keyans_show_item_opt:

```

Now *store* the current `⟨label⟩` first in the *prop list* (including the *optional argument*), run the internal “*label and ref*” system if the `save-ref` key is active, then *store* in the *sequence* and finally increments `\g__enumext-check_starred_cmd_int` for internal check system.

```

3582   \__enumext_keyans_addto_prop:n { #1 }
3583   \__enumext_keyans_store_ref:
3584   \__enumext_keyans_addto_seq:n { #1 }
3585   \int_gincr:N \g__enumext_check_starred_cmd_int
3586 }

```

(End of definition for `__enumext_keyans_starred_item:n`.)

`\item*` The function `__enumext_keyans_redefine_item:` is responsible for adding the *starred argument* and *optional argument* by the `__enumext_list_arg_two_v:` function in the definition of the `keyans` environment. Here we will set to true the variable `\l__enumext_item_wrap_key_bool` used by the `wrap-ans*` key only when `\item*` is executed and additionally we need to use `\peek_remove_spaces:n` to avoid an unwanted space when using `\item*` together with the `itemindent` key. This function are passed to `__enumext_list_arg_two_v:` used in the definition of the `keyans` environment (§13.39).

```

3587 \cs_new_protected:Nn \__enumext_keyans_redefine_item:
3588 {
3589   \RenewDocumentCommand \item { s o }
3590   {
3591     \bool_if:nTF {##1}
3592     {
3593       \bool_set_true:N \l__enumext_item_wrap_key_bool % wrap-ans*
3594       \peek_remove_spaces:n
3595       {
3596         \__enumext_keyans_starred_item:n {##2}
3597       }
3598     }
3599     {
3600       \bool_set_false:N \l__enumext_item_wrap_key_bool
3601       \__enumext_keyans_default_item:n {##2}
3602     }
3603   }
3604 }

```

(End of definition for `\item*` and `__enumext_keyans_redefine_item:`. This function is documented on page 16.)

`__enumext_keyans_make_label:` The function `__enumext_keyans_make_label:` redefine `\make_label` for the keys `mode-box`, `align`, `font`, `wrap-label`, `wrap-label*`, `wrap-ans*` and `\item*` for `keyans` environment. This function are passed to `__enumext_list_arg_two_v:` used in the definition of the `keyans` environment (§13.39).

```

3605 \cs_new_protected:Nn \__enumext_keyans_make_label:
3606 {
3607   \IfDocumentMetadataTF
3608   {
3609     \__enumext_keyans_make_label_box:
3610   }
3611   {
3612     \bool_if:NTF \l__enumext_mode_box_bool
3613     {
3614       \__enumext_keyans_make_label_box:
3615     }
3616     {
3617       \__enumext_keyans_make_label_std:
3618     }
3619   }
3620 }

```

We added conditionals to the `__enumext_keyans_wrapper_label:n` function to handle the keys `wrap-ans*`, `wrap-label` and `wrap-label*`.

```

3621 \cs_new_protected:Npn \__enumext_keyans_wrapper_label:n #1
3622 {
3623   \bool_lazy_all:nT
3624   {

3665   }
3666 }

```

(End of definition for `__enumext_keyans_make_label:` and others.)

13.39 Second argument of the lists

At this point in the code we have already programmed most of the tools needed to create a *custom list* environment, remember that the `__enumext_start_list:nn` function takes two arguments, we have the “first” one ready, the “second” one we will define for all levels of the `enumext` environment, the `keyans` environment and the `enumext*` and `keyans*` environments.

Here we will implement the `__enumext_list_arg_two_X:` function, which will be responsible for setting all the list parameters, the counter, the redefinition of `\item`, `\makeLabel` along with the keys `ref`, `itemindent` and `show-length`.

- In the functions `__enumext_list_arg_two_X:` we will implement the “counter” for the environments, but we do NOT set the “start value” for it to be compatible with *tagged PDF* that should be done later.

13.39.1 Calculation of `\leftmargin` and `\itemindent`

Consider the figure 9 where the default margins (on the left) of a list are represented.

Figure 9: Representation of standard horizontal lengths in `list` environment.

The idea is to have control over these margins so that our list does not overlap the left margin of the page. The *key relationship* is that the “right edge” of the `\labelsep` equals the “right edge” of the `\itemindent`, so that the left edge of the “label box” is at `\leftmargin + \itemindent` minus `\labelwidth + \labelsep`. Thus, the handling of the margins by the package will be as shown in the figure 10.

Figure 10: Representation of horizontal lengths concept in list in `enumext`.

Where the default values will look like in the figure 11.

Figure 11: Default horizontal lengths in enumext.

```
\__enumext_calc_hspace:NNNNNNN
\__enumext_calc_hspace:ccccccc
```

The function `__enumext_calc_hspace:NNNNNNN` takes seven arguments to be able to determine horizontal spaces for all list environment:

```
#1: \__enumext_labelwidth_X_dim      #2: \__enumext_labelsep_X_dim
#3: \__enumext_listoffset_X_dim      #4: \__enumext_leftmargin_tmp_X_dim
#5: \__enumext_leftmargin_X_dim      #6: \__enumext_itemindent_X_dim
#7: \__enumext_leftmargin_tmp_X_bool
```

And returns the “adjusted” values of `\leftmargin` and `\itemindent`.

```
3667 \cs_new_protected:Npn \__enumext_calc_hspace:NNNNNNN #1 #2 #3 #4 #5 #6 #7
3668 {
3669   \dim_compare:nNt { #1 } < { \c_zero_dim }
3670   {
3671     \msg_warning:nnnV { enumext } { width-non-positive } { labelwidth } { #1 }
3672     \dim_set:Nn #1 { \dim_abs:n { #1 } }
3673   }
3674   \dim_compare:nNt { #2 } < { \c_zero_dim }
3675   {
3676     \msg_warning:nnnV { enumext } { width-negative } { labelsep } { #2 }
3677     \dim_set:Nn #2 { \dim_abs:n { #2 } }
3678   }
}
```

If no value has been passed to the `labelwidth` and `labelsep` keys we set the default values for `__enumext_leftmargin_tmp_X_dim`.

```
3679   \bool_if:NF #7 { \dim_set:Nn #4 { #1 + #2 } }
```

We now analyze the cases and set the values for `\leftmargin` and `\itemindent`.

```

```

For the horizontal environments `enumext*` and `keyans*` the implementation is similar, but, the value of `\partopsep` is always `\opt`. At this point we will modify the `parsep` key to make it take the value of the `itemsep` key and later, in the environment definition, we will modify `parindent` to make it set the value of `\lisparindent` and `parsep` to set the value of `\parskip` locally.

```

3930   }
3931   {
3932     \__enumext_multicols_stop:
3933   }

```

Now we will execute the functions `__enumext_after_stop_list:` used by the key `after`, `__enumext_check_ans_key_hook:` used by the key `check-ans`, `__enumext_vspace_below:` used by the keys `below` and `below*`. Finally set `\l__enumext_standar_bool` to false and call the function `__enumext_resume_save_counter:` used by the `series`, `resume` and `resume*` keys.

```

3934   \__enumext_after_stop_list:
3935   \__enumext_check_ans_key_hook:
3936   \__enumext_vspace_below:
3937   \bool_set_false:N \l__enumext_standar_bool
3938   \bool_if:NF \l__enumext_print_keyans_cmd_bool
3939   {
3940     \__enumext_standar_save_counter:
3941   }
3942 }

```

(End of definition for `__enumext_second_part:`.)

`__enumext_set_item_width:` The function `__enumext_set_item_width:` will set the value of `\itemwidth` taking into account the value established by the `list-offset` key for each level of the environment.

```

3943 \cs_new_protected:Nn \__enumext_set_item_width:
3944 {
3945   \dim_set:Nn \itemwidth { \linewidth }
3946   \dim_compare:nT
3947   {
3948     \dim_use:c { \l__enumext_listoffset_ \__enumext_level: _dim } != \c_zero_dim
3949   }
3950   {
3951     \dim_sub:Nn \itemwidth
3952     {
3953       \dim_use:c { \l__enumext_listoffset_ \__enumext_level: _dim }
3954     }
3955   }
3956 }

```

(End of definition for `__enumext_set_item_width:`.)

`__enumext_start_counter:` For compatibility with *tagged* PDF and since we are using legacy code for the implementation, we must set the initial value of the counters after the second argument to the list environment and before the first execution of `\item`, i.e. `\begin{list}{\langle arg one \rangle}{\langle arg two \rangle}\setcounter{enumX}`.

🔗 This is described in *processing order of legacysetupcode in the block templates* and we will apply the workaround provided by Frank Mittelbach.

```

3957 \cs_new_protected:Nn \__enumext_start_counter:
3958 {
3959   \setcounter { enumX \__enumext_level: }
3960   {
3961     \int_eval:n { \int_use:c { \l__enumext_start_ \__enumext_level: _int } - 1 }
3962   }
3963 }

```

(End of definition for `__enumext_start_counter:`.)

enumext Now create the `enumext` environment based on `list` environment by levels.

```

3964 \NewDocumentEnvironment{enumext}{0}{ }
3965 {
3966   \__enumext_safe_exec:
3967   \__enumext_parse_keys:n {#1}
3968   \__enumext_before_list:
3969   \__enumext_start_store_level:
3970   \__enumext_start_list:nn
3971     { \tl_use:c { \__enumext_label_ \__enumext_level: _tl } }
3972     {
3973       \use:c { __enumext_list_arg_two_ \__enumext_level: : }
3974       \__enumext_before_keys_exec:
3975     }
3976   \__enumext_start_counter:
3977   \__enumext_set_item_width:
3978   \__enumext_after_args_exec:
3979 }
3980 {
3981   \__enumext_second_part:
3982 }

```

(End of definition for `enumext`. This function is documented on page 5.)

As we don't want our check to be executed `check-ans` by levels but on the complete list, we will take it out of the `enumext` environment using the “hook” function `__enumext_after_env:nn`.

```

3983 \__enumext_after_env:nn {enumext}
3984 {
3985   \__enumext_execute_after_env:
3986 }

```

13.41 The environment keyans

The environment `keyans` also based on lists. The main differences with the `enumext` environment are the *nesting* and the way the *answers* (choice) will be stored and checked, this environment is intended exclusively for “multiple choice questions”.

`__enumext_keyans_safe_exec:` The `keyans` environment will only be available if the `save-ans` key is active and can only be used at the “first level” within the `enumext` environment. We do not want the environment to be nested, so we will set a maximum at this point. If the conditions are not met, an error message will be returned.

```

3987 \cs_new_protected:Nn \__enumext_keyans_safe_exec:
3988 {
3989   \bool_if:NF \l__enumext_store_active_bool
3990   {
3991     \msg_error:nnnn { enumext } { wrong-place } { keyans } { save-ans }
3992   }
3993   \int_incr:N \l__enumext_keyans_level_int
3994   \bool_set_true:N \l__enumext_keyans_env_bool
3995   \__enumext_keyans_name_and_start:
3996   % Set false for interfering with enumext nested in keyans (yes, its possible and crayze)
3997   \bool_set_false:N \l__enumext_store_active_bool
3998   \int_compare:nNt { \l__enumext_keyans_level_int } > { 1 }
3999   {
4000     \msg_error:nn { enumext } { keyans-nested }
4001   }
4002   \int_compare:nNt { \l__enumext_level_int } > { 1 }
4003   {
4004     \msg_error:nn { enumext } { keyans-wrong-level }
4005   }
4006 }

```

(End of definition for `__enumext_keyans_safe_exec:`.)

`__enumext_keyans_parse_keys:n` Parse [`<key = val>`] for `keyans` environment.

```

4007 \cs_new_protected:Npn \__enumext_keyans_parse_keys:n #1
4008 {
4009   \keys_set:nn { enumext / keyans } {#1}
4010 }

```

(End of definition for `__enumext_keyans_parse_keys:n`.)

```

4118 {
4119     \__enumext_check_starred_cmd:n { item }
4120     \__enumext_second_part_v:
4121 }

```

(End of definition for keyans. This function is documented on page 16.)

13.42 Tagging PDF support for non-standart list environments

The \TeX release 2022-06-01 brings automatic support for *tagged* PDF in several aspects, including the standard *list environments* and the `list` environment. Unfortunately non-standard *list environments* like *keyanspic* or the horizontal list environments *enumext** and *keyans** are not structured in a nice way, i.e. the expected result in the PDF file is the expected one, but the underlying structure is not correct. In simple terms, for *tagged* PDF a `list` environment is a `list` environment, no matter what it looks like in the PDF file.

To maintain a correct `list` structure when `\DocumentMetadata` is active, it is necessary to do some things manually using `tagpdf`[18] and `ltsockets`[20]. This implementation is an adaptation of my answer thanks to Ulrike Fischer's comments in [How can I modify my \item redefinition to be compatible with tagging-pdf](#).

13.42.1 Socket for tagging support in enumext* and keyans*

```
start-list-tags
stop-start-tags
stop-list-tags
__enumext_start_list_tag:n
  __enumext_stop_start_list_tag:
  __enumext_stop_list_tag:n
```

We will first define the necessary sockets and their behavior for `enumext*` and `keyans*`.

```
4122 \socket_new:nn {tagsupport/__enumext/starred}{ 1 }
4123 \socket_new_plug:nnn {tagsupport/__enumext/starred} {start-list-tags}
4124 {
4125   \tag_resume:n {#1}
4126   \tag_mc_end_push:
4127     \tag_struct_begin:n {tag=LI}
4128     \tag_struct_begin:n {tag=Lbl}
4129     \tag_mc_begin:n {tag=Lbl}
4130 }
4131 \socket_new_plug:nnn {tagsupport/__enumext/starred} {stop-start-tags}
4132 {
4133   \tag_mc_end:
4134   \tag_struct_end:n {tag=Lbl}
4135   \tag_struct_begin:n {tag=LBody}
4136   \tag_struct_begin:n {tag=text-unit}
4137   \tag_struct_begin:n {tag=text}
4138 }
4139 \socket_new_plug:nnn {tagsupport/__enumext/starred} {stop-list-tags}
4140 {
4141   \tag_struct_end:n {tag=text}
4142   \tag_struct_end:n {tag=text-unit}
4143   \tag_struct_end:n {tag=LBody}
4144   \tag_struct_end:n {tag=LI}
4145   \tag_mc_begin_pop:n {}
4146   \tag_suspend:n {#1}
4147 }
```

And now we'll wrap them so that they're only active when `\DocumentMetadata` is present.

```
4148 \cs_new_protected_nopar:Npn __enumext_start_list_tag:n #1
4149 {
4150   \IfDocumentMetadataT
4151   {
4152     \socket_assign_plug:nn {tagsupport/__enumext/starred} {start-list-tags}
4153     \socket_use:nn {tagsupport/__enumext/starred} {#1}
4154   }
4155 }
4156 \cs_new_protected_nopar:Npn __enumext_stop_start_list_tag:
4157 {
4158   \IfDocumentMetadataT
4159   {
4160     \socket_assign_plug:nn {tagsupport/__enumext/starred} {stop-start-tags}
4161     \socket_use:nn {tagsupport/__enumext/starred} {}
4162   }
4163 }
4164 \cs_new_protected_nopar:Npn __enumext_stop_list_tag:n #1
4165 {
4166   \IfDocumentMetadataT
4167   {
4168     \socket_assign_plug:nn {tagsupport/__enumext/starred} {stop-list-tags}
4169     \socket_use:nn {tagsupport/__enumext/starred} {#1}
4170   }
4171 }
```

(End of definition for `start-list-tags` and others.)

13.42.2 Socket for tagging support in keyanspic

```
start-list-tags
stop-start-tags
stop-list-tags
__enumext_anspic_start_list_tag:
__enumext_anspic_stop_start_list_tag:
__enumext_anspic_stop_list_tag:
```

We will first define the necessary sockets and their behavior for `keyanspic` environment.

```
4172 \socket_new:nn {tagsupport/__enumext/keyanspic}{ 0 }
4173 \socket_new_plug:nnn {tagsupport/__enumext/keyanspic} {start-list-tags}
4174 {
4175   \tag_resume:n {keyanspic}
4176   \tag_mc_end_push:
4177     \tag_struct_begin:n {tag=LI}
4178     \tag_struct_begin:n {tag=Lbl}
4179     \tag_mc_begin:n {tag=Lbl}
4180 }
4181 \socket_new_plug:nnn {tagsupport/__enumext/keyanspic} {stop-start-tags}
4182 {
4183   \tag_mc_end:
```

```
4184 \tag_struct_end:n {tag=Lbl}
4185 \tag_struct_begin:n {tag=LBody}
4186 \tag_struct_begin:n {tag=text-unit}
4187 \tag_struct_begin:n {tag=text}
4188 \tag_mc_begin:n {tag=text}
4189 }
4190 \socket_new_plug:nnn {tagsupport/__enumext/keyanspic} {stop-list-tags}
4191 {
4192     \tag_mc_end:
4193     \tag_struct_end:n {tag=text}
4194     \tag_struct_end:n {tag=text-unit}
4195     \tag_struct_end:n {tag=LBody}
4196     \tag_struct_end:n {tag=LI}
4197     \tag_mc_begin_pop:n {}
4198     \tag_suspend:n {keyanspic}
4199 }
4200 \cs_new_protected_nopar:Nn \__enumext_anspic_start_list_tag:
4201 {
4202     \IfDocumentMetadataT
4203     {
4204         \socket_assign_plug:nn {tagsupport/__enumext/keyanspic} {start-list-tags}
4205         \socket_use:n {tagsupport/__enumext/keyanspic}
4206     }
4207 }
4208 \cs_new_protected_nopar:Nn \__enumext_anspic_stop_start_list_tag:
4209 {
4210     \IfDocumentMetadataT
4211     {
4212         \socket_assign_plug:nn {tagsupport/__enumext/keyanspic} {stop-start-tags}
4213         \socket_use:n {tagsupport/__enumext/keyanspic}
4214     }
4215 }
4216 \cs_new_protected_nopar:Nn \__enumext_anspic_stop_list_tag:
4217 {
4218     \IfDocumentMetadataT
4219     {
4220         \socket_assign_plug:nn {tagsupport/__enumext/keyanspic} {stop-list-tags}
4221         \socket_use:n {tagsupport/__enumext/keyanspic}
4222     }
4223 }
```

(End of definition for `start-list-tags` and others.)

13.43 The environment `keyanspic` and `\anspic`

The `keyanspic` environment is a `list` based environment that uses the same configuration for “*spacing*” and `<label>` as the `keyans` environment, but it does not use `\item`. The `<contents>` are passed to the environment by means of the `\anspic` command as replacement for `\item` command and placed inside `minipage` environments, with the `<label>` centered “*above*” or “*below*”, adjusting *widths* and *position* according to the options passed to the environment.

Figure 12: Representation of the `keyanspic` spacing in `enumext`.

In order for the `keyanspic` environment and the `\anspic` command to work correctly, we need to set and export some variables in the first part of the environment definition and pass them to `\anspic` which is executed in the second part of the environment. This implementation is adapted from the answer given by Enrico Gregorio (@egreg) in [How to process the body of an environment and divide it by a \macro?](#).

13.43.1 The environment `keyanspic`

`label-pos` First we define the key that allows us to process the position of the `<label>` centered “*above*” or “*below*” which will be `label-pos`, the vertical separation of these from *drawing or tabular* will be handled with the key

label-sep. The “*layout style*” will be handled with the key `layout-sty` will take two values separated by comma `{⟨n° upper, n° lower⟩}` and will determine the number of `minipage` environments in which all arguments of `\anspic` will be printed at the “upper” and “lower” within the environments separated by the value of the key `layout-sep`. The vertical space “top” and “bottom” of the environment will be handled with the key `layout-top`.

```

4224 \keys_define:nn { enumext / keyanspic }
4225 {
4226   label-pos .choice:,
4227   label-pos / above .code:n =
4228     \bool_set_true:N \l__enumext_anspic_label_above_bool

4265   },
4266 }

```

(End of definition for `label-pos` and others.)

```

\__enumext_keyans_pic_safe_exec:
\__enumext_keyans_pic_parse_keys:n
\__enumext_keyans_pic_skip_abs:N
\__enumext_keyans_pic_arg_two:

```

The function `__enumext_keyans_pic_safe_exec:` check the nested level position inside the `enumext` environment.

```

4267 \cs_new_protected:Nn \__enumext_keyans_pic_safe_exec:
4268 {
4269   \int_incr:N \l__enumext_keyans_pic_level_int
4270   \int_compare:nNnT { \l__enumext_keyans_pic_level_int } > { 1 }
4271   {
4272     \msg_error:nn { enumext } { keyanspic-nested }
4273   }
4274   \__enumext_keyans_name_and_start:
4275 }

```

Parse [`⟨key = val⟩`] for `keyanspic` environment.

```

4276 \cs_new_protected:Npn \__enumext_keyans_pic_parse_keys:n #1
4277 {
4278   \tl_if_novalue:nF {#1}
4279   {
4280     \keys_set:nn { enumext / keyanspic } {#1}
4281   }
4282 }

```

The function `__enumext_keyans_pic_skip_abs:N` will return a positive value `\parsep` from `keyans` environment.

```

4283 \cs_new_protected:Npn \__enumext_keyans_pic_skip_abs:N #1
4284 {
4285   \dim_compare:nNtT { #1 } < { \c_zero_dim }
4286   {
4287     \skip_set:Nn #1 { -#1 }
4288   }
4289 }

```

The `__enumext_keyans_pic_arg_two:` function will be used in the *second argument* of the `list` environment that defines the `keyanspic` environment, with this we will take the configuration of the “spaces” and the keys `label`, `wrap-label`, `parsep` and `topsep` from the `keyans` environment. The first thing we need to do is set the boolean variable `\l__enumext_leftmargin_tmp_v_bool` handled by the `list-indent` key to “false”, then copy the definition of the second list argument from the `keyans` environment definition and make sure that `\parsep` does not have a negative value.

```

4290 \cs_new_protected:Npn \__enumext_keyans_pic_arg_two:
4291 {
4292   \bool_set_false:N \l__enumext_leftmargin_tmp_v_bool
4293   \__enumext_list_arg_two_v:
4294   \__enumext_keyans_pic_skip_abs:N \parsep

```

Now we increment the counter `enumXv` of the `keyans` environment and save the *total height* of the `(label)` in `\l__enumext_anspic_label_htdp_dim` used by `\anspic` and we will adjust the values of `\parsep` only if the key `label-pos` is set to *below*.

```

4295   \bool_if:NF \l__enumext_anspic_label_above_bool
4296   {
4297     \stepcounter { enumXv }
4298     \hbox_set:Nn \l__enumext_anspic_label_box { \l__enumext_label_v_tl }
4299     \dim_set:Nn \l__enumext_anspic_label_htdp_dim
4300     {
4301       \box_ht_plus_dp:N \l__enumext_anspic_label_box
4302     }
4303     \skip_add:Nn \parsep
4304     {
4305       \l__enumext_anspic_label_htdp_dim
4306       + \box_dp:N \strutbox
4307       + \l__enumext_anspic_label_sep_skip
4308     }
4309   }

```

Finally we *adjust* the value of `\leftmargin` and `\topsep` then set `\listparindent`, `\partopsep` and `\itemsep` to zero so that the *horizontal* and *vertical* space is not affected.

```

4310   \dim_add:Nn \leftmargin { -\l__enumext_labelwidth_v_dim - \l__enumext_labelsep_v_dim }
4311   \ignorespaces
4312   \skip_add:Nn \topsep { 0.5\box_dp:N \strutbox }
4313   \dim_zero:N \listparindent
4314   \skip_zero:N \partopsep
4315   \skip_zero:N \itemsep
4316 }

```

(End of definition for `__enumext_keyans_pic_safe_exec:` and others.)

keyanspic Now we define the environment `keyanspic`. For compatibility with *tagged* PDF we must use the `\begin{list}` form and a lot of conditional code using `\IfDocumentMetadataTF`. We will first stop the code for automatic *tagged* PDF for `list` environments, redefine `\item` so that it cannot be used, and stop the code for automatic *tagged* PDF for the `keyanspic` environment.

```

4317 \NewDocumentEnvironment{keyanspic}{ o }
4318 {
4319   \__enumext_keyans_pic_safe_exec:
4320   \__enumext_keyans_pic_parse_keys:n {#1}
4321   \begin{list} { } { \__enumext_keyans_pic_arg_two: }
4322   \IfDocumentMetadataT
4323   {
4324     \tag_suspend:n {list}
4325   }
4326   \item[] \scan_stop:
4327   \RenewDocumentCommand \item {}
4328   {
4329     \msg_error:nn { enumext } { keyanspic-item-cmd }
4330   }

```

```

4331 \IfDocumentMetadataT
4332 {
4333   \tag_resume:n {keyanspic}
4334   \tag_tool:n {para/tagging=false}
4335   \tag_suspend:n {keyanspic}
4336 }
4337 }

```

In the second part of the environment definition we will manually place our code for *tagged* PDF and execute the command `\anspic` using the `__enumext_anspic_exec:` function.

```

4338 {
4339   \IfDocumentMetadataT
4340   {
4341     \tag_resume:n {keyanspic}
4342     \tag_mc_end_push:
4343     \tag_struct_begin:n {tag=L,attribute=enumerate}
4344   }
4345   \__enumext_anspic_exec:
4346   \IfDocumentMetadataT
4347   {
4348     \tag_suspend:n {keyanspic}
4349   }
4350   \end{list}
4351   \IfDocumentMetadataT
4352   {
4353     \tag_struct_end:n {tag=L}
4354     \tag_mc_begin_pop:n {}
4355     \tag_struct_end:n {tag=L}
4356     \tag_mc_begin_pop:n {}
4357   }

```

Finally we check if `\anspic*` has been used, set the counter `enumXvi` to zero and apply our “adjusted” vertical space bottom.

```

4358 \__enumext_check_starred_cmd:n { anspic }
4359 \setcounter { enumXvi } { 0 }
4360 \bool_if:NTF \__enumext_anspic_label_above_bool
4361 {
4362   \par\addvspace{ 0.5\box_dp:N \strutbox }
4363 }
4364 {
4365   \par
4366   \addvspace
4367   {
4368     \dim_eval:n
4369     {
4370       \__enumext_anspic_label_htdp_dim + \box_ht_plus_dp:N \strutbox
4371       + \__enumext_anspic_label_sep_skip + \__enumext_topsep_v_skip
4372     }
4373   }
4374 }
4375 }

```

(End of definition for `keyanspic`. This function is documented on page 17.)

13.43.2 The command `\anspic`

The `\anspic` command take three arguments, the *starred* versions `\anspic*[\langle content \rangle]` store the current *label* next to the *optional* argument `[\langle content \rangle]` in the *sequence* and *prop* list defined by `save-ans` key. The third *mandatory* argument `{\langle drawing or tabular \rangle}` is NOT stored in the *sequence* or *prop* list.

- One of the complications here to make the `keyanspic` environment compatible with *tagged* PDF is the position of *label*, the `\anspic` command processes the arguments in order, where #1 and #2 correspond to *label* and #3 to the mandatory argument and puts all this inside a `minipage` environment. If #1 and #2, that is *label*, is above #3 there are no problems with *tagged* PDF, but if #3 comes first the list created with *tagged* PDF will not be correct.

`\anspic`

We check that the command is active in the `keyanspic` environment only if the `save-ans` key is present, otherwise we return an error. The three arguments are handled by the function `__enumext_anspic_args:nnn` and stored in the sequence `__enumext_anspic_args_seq` which is processed by the `keyanspic` environment.

```

4376 \NewDocumentCommand \anspic { s o +m }
4377 {
4378   \bool_if:NF \__enumext_store_active_bool
4379   {

```

```

4380     \msg_error:nnnn { enumext } { wrong-place }{ keyanspic }{ save-ans }
4381   }
4382   \int_compare:nNt { \l__enumext_level_int } > { 1 }
4383   {
4384     \msg_error:nn { enumext } { keyanspic-wrong-level }
4385   }
4386   \int_compare:nNt { \l__enumext_keyans_level_int } = { 1 }
4387   {
4388     \msg_error:nnnn { enumext } { command-wrong-place }{ anspic }{ keyans }
4389   }
4390   \seq_put_right:Nn \l__enumext_anspic_args_seq
4391   {
4392     \l__enumext_anspic_args:nnn { #1 } { #2 } { #3 }
4393   }
4394 }

```

The `\l__enumext_anspic_body_dim:n` function will set the value of `\l__enumext_anspic_body_htdp_dim` equal to the “height plus depth” of the *mandatory argument* if the key `label-pos` is set “below”.

```

4395 \cs_new_protected:Npn \l__enumext_anspic_body_dim:n #1
4396 {
4397   \bool_if:NF \l__enumext_anspic_label_above_bool
4398   {
4399     \IfDocumentMetadataT
4400     {
4401       \tag_suspend:n {keyanspic}
4402     }
4403     \vbox_set:Nn \l__enumext_anspic_body_box { #1 }
4404     \dim_set:Nn \l__enumext_anspic_body_htdp_dim
4405     {
4406       \box_ht_plus_dp:N \l__enumext_anspic_body_box
4407     }
4408     \IfDocumentMetadataT
4409     {
4410       \tag_resume:n {keyanspic}
4411     }
4412   }
4413 }

```

The `\l__enumext_anspic_label:nn` function will process inside `\makebox` the *starred argument* ‘*’ and *optional argument* passed to the command. Here we will store the `<label>` and *optional argument* in *prop list* and *sequence* and execute the `show-ans`, `show-pos`, `font`, `wrap-label`, `wrap-ans*` and `wrap-opt` keys.

```

4414 \cs_new_protected:Npn \l__enumext_anspic_label:nn #1 #2
4415 {
4416   \makebox[ \l__enumext_anspic_mini_width_dim ][ c ]
4417   {

4518     }
4519     {
4520         \__enumext_anspic_print:V \l__enumext_anspic_layout_style_tl
4521     }
4522 }

```

(End of definition for `\anspic` and others. This function is documented on page 17.)

13.44 The horizontal environments

Generating *horizontal list environments* is NOT as simple as standard \TeX list environments. The fundamental part of the code is adapted from the `shortlst` package to a more modern version using `expl3`. It is not possible to redefine `\item` and `\makelabel` using `\RenewDocumentCommand` as in the vertical *non starred* versions.

To achieve the *horizontal list environments* we will capture the `\item` command and the $\langle content \rangle$ of this in *horizontal box* using `\makebox` for the `label` and a `minipage` environment for the $\langle content \rangle$ passed to `\item`, we will also add the *optional argument* ($\langle number \rangle$) to `\item` to be able to *join columns* horizontally, in simple terms, we want `\item` to behave in the same way as in the `enumext` environment but adding an *first optional argument* ($\langle number \rangle$).

A side effect is the limitation of using `\item` in this way *without* using `\RenewDocumentCommand`, which loses the original definition and affects the *standard list environments* provided by \TeX and any environment defined using base `list` environment, including: `itemize`, `enumerate`, `description`, `quote`, `quotation`, `verse`, `center`, `flushleft`, `flushright`, `verbatim`, `tabbing`, `trivlist`, `list` and all environments created with `\newtheorem`.

One way to get around this is to use something like:

```
\AddToHook{env/enumerate/before}{recover original \item definition}
```

inside `minipage`, but in my partial tests this does not have the desired effect and the vertical and horizontal spacing is distorted. For now this will remain as a limitation and I will see if it is feasible to implement it in the future.

For compatibility with the *tagged* PDF we close the environments according to the presence or not of the `mini-env` key.

13.44.1 Functions for item box width

We set the default value for the *width of the box* containing the $\langle content \rangle$ of the items for `enumext*` environment.

```

\__enumext_starred_columns_set_vii:
\__enumext_starred_columns_set_viii:

13.44.3 Functions for mini-env, mini-right and mini-right* keys

```

\__enumext_start_mini_vii:
\__enumext_stop_mini_vii:

```

The implementation of the `mini-env` key support is almost identical to the one used in the `enumext` and `keyans` environments, the difference is that the `__enumext_mini_page` environment on the “right side” is executed “after” closing the environment, so it is necessary to make a global copy of the variable `\l__enumext_minipage_right_vii_dim` in the variable `\g__enumext_minipage_right_vii_dim`.

```

4683 \cs_new_protected:Nn \__enumext_start_mini_vii:
4684 {
4685   \dim_compare:nNnT { \l__enumext_minipage_right_vii_dim } > { \c_zero_dim }
4686   {
4687     \dim_set:Nn \l__enumext_minipage_left_vii_dim
4688     {
4689       \linewidth
4690       - \l__enumext_minipage_right_vii_dim
4691       - \l__enumext_minipage_hsep_vii_dim
4692     }
4693     \bool_set_true:N \l__enumext_minipage_active_vii_bool
4694     \dim_gset_eq:NN
4695       \g__enumext_minipage_right_vii_dim
4696       \l__enumext_minipage_right_vii_dim
4697     \__enumext_mini_addvspace_vii:
4698     \nointerlineskip\noindent
4699     \__enumext_mini_page{ \l__enumext_minipage_left_vii_dim }
4700   }
4701 }

```

The function `__enumext_stop_mini_vii:` closes the `__enumext_mini_page` environment on the “left side”, applies `\hfill` and set the variable `\g__enumext_minipage_active_vii_bool` to “true” which will be used in the function `__enumext_after_env:n` to execute the `minipage` on the “right side”. At this point we will execute the `__enumext_stop_list:` and `__enumext_stop_store_level_vii:` functions stopping the `list` environment and the level saving mechanism for storage in *sequence* of the `\anskey` command and `anskey*` environment. This function is passed to the `__enumext_after_list_vii:` function in the second part of the `enumext*` environment definition (§13.45).

```

4702 \cs_new_protected:Nn \__enumext_stop_mini_vii:

(End of definition for `__enumext_start_mini_viii:` and `__enumext_stop_mini_viii:`.)

13.45 The environment `enumext*`

`enumext*` First we will generate the environment and we will give a temporary definition to `__enumext_stop_item_tmp_vii:` equal to `__enumext_first_item_tmp_vii:` and next to `\item` equal to `__enumext_start_item_tmp_vii:` which we will redefine later. Unlike the implementation used by the `shortlst` package, we will not set the values of `\rightskip` and `\@rightskip` equal to `\@flushglue` whose value is `0.0pt plus 1.0 fil`, in the tests I have performed this fails in some circumstances and different results are obtained when using pdfTeX and LuaTeX.

```

4807 \NewDocumentEnvironment{enumext*}{o}
4808 {
4809     \__enumext_safe_exec_vii:

4898     }
4899   }
4900 }

```

(End of definition for `__enumext_start_store_level_vii:` and `__enumext_stop_store_level_vii:`.)

13.45.1 The command `\item` in `enumext*`

`__enumext_first_item_tmp_vii:`

The `__enumext_first_item_tmp_vii:` function will remove horizontal space equal to `\labelwidth` plus `\labelsep` to the left of the “*first*” `\item` in the environment at the point of execution of this function, where it is equal to the `__enumext_stop_item_tmp_vii:` function inside the environment body definition.

```

4901 \cs_new_protected_nopar:Nn \__enumext_first_item_tmp_vii:
4902 {
4903   \skip_horizontal:n
4904   {
4905     -\__enumext_labelwidth_vii_dim - \__enumext_labelsep_vii_dim
4906   }
4907   \ignorespaces
4908 }

```

(End of definition for `__enumext_first_item_tmp_vii:`.)

`__enumext_start_item_tmp_vii:`

`__enumext_item_peek_args_vii:`

`__enumext_joined_item_vii:w`

`__enumext_standar_item_vii:w`

`__enumext_starred_item_vii:w`

First we will call the function `__enumext_stop_item_tmp_vii:` that we will redefine later, we will increment the value of `__enumext_item_column_pos_vii_int` that will count the item’s by rows and the value of `\g__enumext_item_count_all_vii_int` that will count the total of item’s in the environment. After that we will call the function `__enumext_item_peek_args_vii:` that will handle the arguments passed to `\item`.

```

4909 \cs_new_protected_nopar:Nn \__enumext_start_item_tmp_vii:
4910 {
4911   \__enumext_stop_item_tmp_vii:
4912   \int_incr:N \__enumext_item_column_pos_vii_int
4913   \int_gincr:N \g__enumext_item_count_all_vii_int
4914   \__enumext_item_peek_args_vii:
4915 }

```

The function `__enumext_item_peek_args_vii:` will handle the `\item(<number>)`. Look for the argument “(”, if it is present we will call the function `__enumext_joined_item_vii:w (<number>)`, which is in charge of joining the item’s in the same row, in case they are not present we will set the default value (1).

```

4916 \cs_new_protected:Nn \__enumext_item_peek_args_vii:
4917 {
4918   \peek_meaning:NTF (
4919     { \__enumext_joined_item_vii:w }
4920     { \__enumext_joined_item_vii:w (1) }
4921   )

```

The function `__enumext_joined_item_vii:w` will first call the function `__enumext_starred_joined_item_vii:n` in charge of setting the *width* of the box that will store the content passed to `\item`. Then we will look for the argument “*”, if it is present we will call the function `__enumext_starred_item_vii:w` otherwise we will call the function `__enumext_standar_item_vii:w`.

```

4922 \cs_new_protected:Npn \__enumext_joined_item_vii:w (#1)
4923 {

```

```

4924     \__enumext_starred_joined_item_vii:n {#1}

(End of definition for `__enumext_start_item_tmp_vii:` and others.)

`__enumext_fake_make_label_vii:n`

The `__enumext_fake_make_label_vii:n` function will be in charge of handling our definition of `\item`. First we increment the counter `enumxvii` for the enumerated items and activate support for the *check answers* mechanism, followed by support for `\item*[⟨symbol⟩][⟨offset⟩]` if present, then the `wrap-label` and `wrap-label*` keys which we execute using `\makebox` whose width will be given by the `labelwidth` key and position by the `align` key, inside the argument of this we will execute the `font` key together with the function defined by the `wrap-label` or `wrap-label*` keys. Finally we execute the `labelsep` key applying a `\skip_horizontal:N` and `\ignorespaces`.

◆ For compatibility with *tagged* PDF and *hyperref* when an environment `enumext` is nested in `enumext*` and the key `save-ans` is not active need setting the `\if@hyper@item` switch to “true”. The explanation for this is given by the master

Heiko Oberdiek on `\refstepcounter{enumi}` twice (or more) creates destination with the same identifier. This patch is only needed if you are running `pdflatex` and not if you are running `lualatex`

13.45.2 Real definition of `\item` in `enumext*`

The functions `__enumext_start_item_vii:w` and `__enumext_stop_item_vii:` executing the true definition of `\item` inside the `enumext*` environment, unlike the implementation in `shortlst` we will NOT use an extra group and the plain form of the `lrbox` environment.

```

\__enumext_start_item_vii:w
\__enumext_stop_item_vii:

```

The first thing we will do is set the value of `__enumext_stop_item_tmp_vii:` equal to `__enumext_stop_item_vii:` which we will define later, after that we will start capturing `\item` and “*item content*” in a *horizontal box* where the width will be `\itemwidth` plus `\labelwidth` plus `\labelsep`.

```

5018 \cs_new_protected_nopar:Npn \__enumext_start_item_vii:w [#1]
5019 {
5020   \cs_set_eq:NN \__enumext_stop_item_tmp_vii: \__enumext_stop_item_vii:
5021   \hbox_set_to_wd:Nnw \l__enumext_item_text_vii_box
5022   {
5023     \l__enumext_joined_width_vii_dim
5024     + \l__enumext_labelwidth_vii_dim
5025     + \l__enumext_labelsep_vii_dim
5026   }

```

Redefine the `\footnote` command.

```

5027   \__enumext_renew_footnote_starred:

```

Now we insert our *sockets* for *tagging* PDF support and run `\item`.

```
5028 \__enumext_start_list_tag:n {enumext*}
5029 \__enumext_fake_make_label_vii:n {#1}
5030 \__enumext_stop_start_list_tag:
```

Finally we open the `minipage` environment, capture the “*item content*”, make `\parindent` take the value of the key `listparindent` and `\parskip` take the value of the key `parsep`, then execute the keys `itemindent` and `first`.

- Here the use of `\unskip` and `\skip_horizontal:n` with the value of `listparindent` is necessary, otherwise an unwanted space is created when using `\item[⟨opt⟩]` and the value passed to the key `itemindent` is incremented.

```

5032 \dim_set_eq:NN \parindent \l__enumext_listparindent_vii_dim
5033 \skip_set_eq:NN \parskip \l__enumext_parsep_vii_skip
5034 \__enumext_unskip_unkern:
5035 \__enumext_unskip_unkern:
5036 \skip_horizontal:n { -\l__enumext_listparindent_vii_dim } \ignorespaces
5037 \tl_use:N \l__enumext_fake_item_indent_vii_tl
5038 \tl_use:N \l__enumext_after_list_args_vii_tl
5039 }
```

The `__enumext_stop_item_vii:` function will finish the fetching `\item` and “*item content*” by closing the `minipage` environment, the *sockets* for *tagging* PDF and the *horizontal box*.

```
5040 \cs_new_protected_nopar:Nn \__enumext_stop_item_vii:
5041 {
5042     \__enumext_endminipage:
5043     \__enumext_stop_list_tag:n {enumext*}
5044     \hbox_set_end:
```

Here we will reduce the *warnings* a bit by setting the value of `\hbadness` to `10000`, print `\item` and “*item content*” from the *horizontal box*.

```
5045 \int_set:Nn \hbadness { 10000 }
5046 \box_use_drop:N \l__enumext_item_text_vii_box
```

Finally apply the *vertical space* between rows set by `itemsep` key passed to `\parsep` using `\par\noindent` and *horizontal space* between columns set by `columns-sep` key using `\skip_horizontal:N`.

```
5047 \int_compare:nNnTF
5048 { \l__enumext_item_column_pos_vii_int } = { \l__enumext_columns_vii_int }
5049 {
5050     \par\noindent
5051     \int_zero:N \l__enumext_item_column_pos_vii_int
5052 }
5053 {
5054     \skip_horizontal:N \l__enumext_columns_sep_vii_dim
5055 }
5056 }
```

(End of definition for `__enumext_start_item_vii:w` and `__enumext_stop_item_vii:`)

`__enumext_remove_extra_parsep_vii:`

Remove the extra *vertical space* equal to `\parsep=\itemsep` when the total number of `\item` is divisible by the number of `\item` in the last row of the environment. Here the use of `\unskip` or `\removeatlastskip` fails and does not obtain the expected result, using `\vspace` is the option and in this case, we can use a simplified version since we are always in (*vertical mode*).

```
5057 \cs_new_protected:Nn \__enumext_remove_extra_parsep_vii:
5058 {
5059     \int_compare:nNnT
5060     {
5061         \int_mod:nn
5062         { \g__enumext_item_count_all_vii_int } { \l__enumext_columns_vii_int }
5063     }
5064     =
5065     { 0 }
5066     {
5067         \para_end:
5068         \skip_vertical:n { -\l__enumext_itemsep_vii_skip }
5069         \skip_vertical:N \c_zero_skip
5070         \int_gzero:N \g__enumext_item_count_all_vii_int
5071     }
5072 }
```

(End of definition for `__enumext_remove_extra_parsep_viii:`)

As we don't want our check to be executed `check-ans` by levels but on the complete list, we will take it out of the `enumext*` environment using the "hook" function `__enumext_after_env:nn`.

```
5073 \__enumext_after_env:nn {enumext*}
5074 {
5075     \__enumext_execute_after_env:
5076 }
```

13.46 The environment `keyans*`

`keyans*` The implementation of `keyans*` environment is the similar as that used by the `enumext*` environment except for the `__enumext_check_starred_cmd:n` function added in the second part.

```
5077 \NewDocumentEnvironment{keyans*}{ o }
5078 {
5079     \__enumext_safe_exec_viii:
5080     \__enumext_parse_keys_viii:n {#1}
5081     \__enumext_before_list_viii:
5082     \__enumext_start_list:nn { }
5083     {
5084         \__enumext_list_arg_two_viii:
5085         \__enumext_before_keys_exec_viii:
5086     }
5087     \setcounter { enumXviii } { \int_eval:n { \int_use:c { l__enumext_start_viii_int } - 1 } }
5088     \IfDocumentMetadataT { \tag_suspend:n {keyans*} }

5138 }

```

(End of definition for `__enumext_before_list_viii:`.)

`__enumext_after_list_viii:` The function `__enumext_after_list_viii:` first call the function `__enumext_stop_mini_viii:`, then apply the `{<code>}` handled by the `after` key together with the *vertical space* handled by the `below` key if they are present.

```

5139 \cs_new_protected:Nn \__enumext_after_list_viii:
5140 {
5141     \__enumext_stop_mini_viii:
5142     \__enumext_after_stop_list_viii:
5143     \__enumext_vspace_below_viii:
5144 }

```

(End of definition for `__enumext_after_list_viii:`.)

13.46.1 The command `\item` in `keyans*`

The idea here is to make the `\item` command behave in the same way as in the `keyans` environment with the difference of the *optional argument* (`<number>`) which works in the same way as in the `enumext*` environment. In simple terms we want to store the `<label>` next to the `[<content>]` if it is present in the *sequence* and *prop list* defined by `save-ans` key for `\item*`, `\item*<content>`, `\item(<number>)*` and `\item(<number>)*<content>` commands.

`__enumext_first_item_tmp_viii:` The `__enumext_first_item_tmp_viii:` function will remove horizontal space equal to `\labelwidth` plus `\labelsep` to the left of the “*first*” `\item` in the environment at the point of execution of this function, where it is equal to the `__enumext_stop_item_tmp_viii:` function inside the environment body definition.

```

5145 \cs_new_protected_nopar:Nn \__enumext_first_item_tmp_viii:
5146 {
5147     \skip_horizontal:n
5148     {
5149         -\__enumext_labelwidth_viii_dim - \__enumext_labelsep_viii_dim
5150     }
5151     \ignorespaces
5152 }

```

(End of definition for `__enumext_first_item_tmp_viii:`.)

`__enumext_start_item_tmp_viii:` First we will call the function `__enumext_stop_item_tmp_viii:` that we will redefine later, we will increment the value of `__enumext_item_column_pos_viii_int` that will count the item’s by rows and the value of `\g__enumext_item_count_all_viii_int` that will count the total of item’s in the environment. `__enumext_item_peek_args_viii:` After that we will call the function `__enumext_item_peek_args_viii:` that will handle the arguments passed to `\item`.

```

5153 \cs_new_protected_nopar:Nn \__enumext_start_item_tmp_viii:
5154 {
5155     \__enumext_stop_item_tmp_viii:
5156     \int_incr:N \__enumext_item_column_pos_viii_int
5157     \int_gincr:N \g__enumext_item_count_all_viii_int
5158     \__enumext_item_peek_args_viii:
5159 }

```

The function `__enumext_item_peek_args_viii:` will handle the `\item(<number>)`. Look for the argument “(”, if it is present we will call the function `__enumext_joined_item_viii:w (<number>)`, which is in charge of joining the item’s in the same row, in case they are not present we will set the default value (1).

```

5160 \cs_new_protected:Nn \__enumext_item_peek_args_viii:
5161 {
5162   \peek_meaning:NTF (
5163     { \__enumext_joined_item_viii:w }
5164     { \__enumext_joined_item_viii:w (1) }
5165   }

```

The function `__enumext_joined_item_viii:w` will first call the function `__enumext_starred_joined_item_viii:n` in charge of setting the *width* of the box that will store the content passed to `\item`. Then we will look for the argument “*”, if it is present we will call the function `__enumext_starred_item_viii:w` otherwise we will call the function `__enumext_standar_item_viii:w`.

```

5166 \cs_new_protected:Npn \__enumext_joined_item_viii:w (#1)
5167 {
5168   \__enumext_starred_joined_item_viii:n {#1}

5343     }
5344     =
5345     { 0 }
5346     {
5347         \para_end:
5348         \skip_vertical:n { -\l__enumext_itemsep_viii_skip }
5349         \skip_vertical:N \c_zero_skip
5350         \int_gzero:N \g__enumext_item_count_all_viii_int
5351     }
5352 }

```

(End of definition for __enumext_remove_extra_parsep_viii:.)

13.47 The command \getkeyans

```

\getkeyans
\__enumext_getkeyans_aux:n
\__enumext_getkeyans:nn

```

The `\getkeyans` command takes a *mandatory argument* of the form $\{ \langle store\ name : position \rangle \}$. Retrieve a “single content” stored by `\anskey`, `\anspic*` and `\item*` and `anskey*` from *prop list* defined by `save-ans` key.

```

5353 \NewDocumentCommand \getkeyans { m }
5354 {
5355     \exp_args:Ne \__enumext_getkeyans_aux:n
5356     { \tl_to_str:e { \text_expand:n {#1} } }
5357 }

```

The internal function `__enumext_getkeyans_aux:n` is in charge of *splitting* the *mandatory argument* using “.”. If “.” is omitted it will return an error.

```

5358 \cs_new_protected:Npn \__enumext_getkeyans_aux:n #1
5359 {
5360     \str_if_in:nnTF {#1} { : }
5361     {
5362         \use:e
5363         {
5364             \cs_set:Npn \exp_not:N \__enumext_tmp:w #1 \c_colon_str ##2 \scan_stop:
5365             { {##1} {##2} }
5366         }
5367         \exp_after:wN \__enumext_getkeyans:nn \__enumext_tmp:w #1 \scan_stop:
5368     }
5369     { \msg_error:nnn { enumext } { missing-colon } {#1} }
5370 }

```

The internal function `__enumext_getkeyans:nn` will check for the existence of the *prop list*, if it does not exist it will return an error message, then it will fetch the content specified by the *second argument* from *prop list*.

```

5371 \cs_new_protected:Npn \__enumext_getkeyans:nn #1 #2
5372 {
5373     \prop_if_exist:cTF { g__enumext_#1_prop }
5374     {
5375         \prop_item:cn { g__enumext_#1_prop } {#2}
5376     }
5377     {
5378         \msg_error:nnn { enumext } { undefined-storage-anskey } {#1}
5379     }
5380 }

```

(End of definition for `\getkeyans`, `__enumext_getkeyans_aux:n`, and `__enumext_getkeyans:nn`. This function is documented on [page 19](#).)

13.48 The command \printkeyans

The `\printkeyans` command prints “*all stored content*” in the *sequence* defined by the `save-ans` key. The first thing we will do is define a set of *filtered keys* with which we will control the options of the different nesting levels for the environment `enumext` and `enumext*` by storing their values in the list of tokens `\l__enumext_print_keyans_X_tl`.

The variable `\l__enumext_print_keyans_starred_tl` will have the default *keys* for `\printkeyans*` and will be set by `\setenumext[⟨print*⟩]` and the variable `\l__enumext_print_keyans_vii_tl` will have the default keys for the environment `enumext*` nested within the *sequence* and will be set by `\setenumext[⟨print,*⟩]`, the rest of the variables will be for the environment `enumext` and will be set by `\setenumext[⟨print,level⟩]`.

```

5381 \keys_define:nn { enumext / print }
5382 {
5383   print* .code:n = \keys_precompile:neN { enumext / enumext* }
5384               { \__enumext_filter_save_key:n {#1} }
5385               \l__enumext_print_keyans_starred_tl, % starred cmd
5386   print* .initial:n = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5387                       rightmargin=0pt, listparindent=0pt, nosep, label=\arabic*.,
5388                       columns=2, first=\small, font=\small },
5389   print-1 .code:n = \keys_precompile:neN { enumext / level-1 }
5390                  { \__enumext_filter_save_key:n {#1} }
5391                  \l__enumext_print_keyans_i_tl,
5392   print-1 .initial:n = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5393                       rightmargin=0pt, listparindent=0pt, nosep, label=\arabic*.,
5394                       columns=2, first=\small, font=\small },
5395   print-2 .code:n = \keys_precompile:neN { enumext / level-2 }
5396                  { \__enumext_filter_save_key:n {#1} }
5397                  \l__enumext_print_keyans_ii_tl,
5398   print-2 .initial:n = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5399                       rightmargin=0pt, listparindent=0pt, nosep, label=(\alph*),
5400                       first=\small, font=\small },
5401   print-3 .code:n = \keys_precompile:neN { enumext / level-3 }
5402                  { \__enumext_filter_save_key:n {#1} }
5403                  \l__enumext_print_keyans_iii_tl,
5404   print-3 .initial:n = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5405                       rightmargin=0pt, listparindent=0pt, nosep, label=\roman*.,
5406                       first=\small, font=\small },
5407   print-4 .code:n = \keys_precompile:neN { enumext / level-4 }
5408                  { \__enumext_filter_save_key:n {#1} }
5409                  \l__enumext_print_keyans_iv_tl,
5410   print-4 .initial:n = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5411                       rightmargin=0pt, listparindent=0pt, nosep, label=\Alph*.,
5412                       first=\small, font=\small },
5413   print-* .code:n = \keys_precompile:neN { enumext / enumext* }
5414                  { \__enumext_filter_save_key:n {#1} }
5415                  \l__enumext_print_keyans_vii_tl, % starred nested
5416   print-* .initial:n = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5417                       rightmargin=0pt, listparindent=0pt, nosep, label=\arabic*.,
5418                       first=\small, font=\small },
5419 }

```

🔗 The reason for storing *keys* in token lists using `\keys_precompile:neN` is because the keys are set via `\setenumext` but are later executed by running the command `\printkeyans` and they are not handled directly by its *optional argument*, except those related to the *first* opening level.

`\printkeyans`

Create a user command to print “*all stored content*” in *sequence* for `\anskey`, `anskey*`, `\item*` and `\anspic*`. Within a group we will run our “*precompiled keys*” and then call the internal function `__enumext_printkeyans:nnn`.

```

5420 \NewDocumentCommand \printkeyans { s O{ } m }
5421 {
5422   \group_begin:
5423     \bool_set_true:N \l__enumext_print_keyans_cmd_bool
5424     \tl_use:N \l__enumext_print_keyans_i_tl
5425     \tl_use:N \l__enumext_print_keyans_ii_tl
5426     \tl_use:N \l__enumext_print_keyans_iii_tl
5427     \tl_use:N \l__enumext_print_keyans_iv_tl
5428     \tl_use:N \l__enumext_print_keyans_vii_tl
5429     \__enumext_printkeyans:nnn { #1 } { #2 } { #3 }
5430     \bool_set_false:N \l__enumext_print_keyans_cmd_bool
5431   \group_end:
5432 }

```

The internal function `__enumext_printkeyans:nnn` will check for the existence of the *sequence*, if it does not exist it will return an error message, then it will check if not empty.

```

5433 \cs_new_protected:Npn \__enumext_printkeyans:nnn #1 #2 #3
5434 {
5435   \seq_if_exist:cTF { g__enumext_#3_seq }
5436   {
5437     \seq_if_empty:cF { g__enumext_#3_seq }
5438     {

```

If the *starred argument* ‘***’ is present we will check that the environment `enumext*` is not saved in the *sequence*, then execute the variable `\l__enumext_print_keyans_starred_tl` that contains the default *⟨keys⟩* for the environment `enumext*`, we set `\l__enumext_base_line_fix_bool` and `\l__enumext_print_keyans_star_bool` to true for *baseline correction*, open the `enumext*` environment passing the *optional argument* and map the *sequence*, then set `\l__enumext_base_line_fix_bool` and `\l__enumext_print_keyans_star_bool` to false.

```

5439       \bool_if:nTF {#1}
5440       {
5441         \seq_if_in:cnTF { g__enumext_#3_seq } { \end{enumext*} }
5442         {
5443           \msg_error:nnnn { enumext } { print-starred } {#3} { enumext* }
5444         }
5445         {
5446           \tl_use:N \l__enumext_print_keyans_starred_tl
5447           \bool_set_true:N \l__enumext_base_line_fix_bool
5448           \bool_set_true:N \l__enumext_print_keyans_star_bool
5449           \begin{enumext*}[#2]
5450             \seq_map_inline:cn { g__enumext_#3_seq } { ##1 }
5451             \end{enumext*}
5452           \bool_set_false:N \l__enumext_base_line_fix_bool
5453           \bool_set_false:N \l__enumext_print_keyans_star_bool
5454         }
5455       }

```

Otherwise it will open the environment `enumext` passing the *optional argument* to the “*first level*” then map the *sequence*.

```

5456       {
5457         \begin{enumext}[#2]
5458         \seq_map_inline:cn { g__enumext_#3_seq } { ##1 }
5459         \end{enumext}
5460       }
5461     }
5462   }
5463   {
5464     \msg_error:nnn { enumext } { undefined-storage-anskey } {#3}
5465   }
5466 }

```

(End of definition for `\printkeyans` and `__enumext_printkeyans:nnn`. This function is documented on page 19.)

13.49 The command `\setenumext`

The command `\setenumext` will be in charge of managing the *⟨keys⟩* passed to all environments and to the `\printkeyans` command. We must take precautions with the `enumext*` environment and “*first level*” of the `enumext` environment so as not to capture *⟨keys⟩* that complicate us.

The function `__enumext_filter_first_level:n` will be in charge of filtering the *⟨keys⟩* passed to the environment `enumext*` and “*first level*” of the environment `enumext`.

```

5467 \cs_new:Npn \__enumext_filter_first_level:n #1
5468 {
5469   \use:e
5470   {
5471     \keyval_parse:NNn
5472     \__enumext_filter_first_level_key:n
5473     \__enumext_filter_first_level_pair:nn {#1}
5474   }
5475 }

```

The function `__enumext_filter_first_level_key:n` will be responsible for filtering the *⟨keys⟩* that are passed “*without value*” by excluding the keys `resume` and `resume*`.

```

5476 \cs_new:Npn \__enumext_filter_first_level_key:n #1
5477 {
5478   \str_case:nnF {#1}

```

```

5479     {
5480         { resume } {}
5481         { resume* } {}
5482     }
5483     { , { \exp_not:n {#1} } }
5484 }

```

The function `__enumext_filter_first_level_pair:nn` will be responsible for filtering the *(keys)* that are passed “with value” by excluding the `series`, `resume` and `save-ans` keys.

```

5485 \cs_new:Npn \__enumext_filter_first_level_pair:nn #1#2
5486 {
5487     \str_case:nnF {#1}
5488     {
5489         { series } {}
5490         { resume } {}
5491         { save-ans } {}
5492     }
5493     { , { \exp_not:n {#1} } } = { \exp_not:n {#2} } }
5494 }

```

(End of definition for `__enumext_filter_first_level:n`, `__enumext_filter_first_level_key:n`, and `__enumext_filter_first_level_pair:nn`.)

Now define a “meta families” of *(keys)* to access from `\setenumext`.

```

5495 \keys_define:nn { enumext / meta-families }
5496 {
5497     enumext-1 .code:n =
5498         {
5499             \keys_set:ne { enumext / level-1 }
5500             {
5501                 \__enumext_filter_first_level:n {#1}
5502             }
5503         } ,
5504     enumext-2 .code:n = { \keys_set:nn { enumext / level-2 } {#1} } ,
5505     enumext-3 .code:n = { \keys_set:nn { enumext / level-3 } {#1} } ,
5506     enumext-4 .code:n = { \keys_set:nn { enumext / level-4 } {#1} } ,
5507     keyans .code:n = { \keys_set:nn { enumext / keyans } {#1} } ,
5508     enumext* .code:n =
5509         {
5510             \keys_set:ne { enumext / enumext* }
5511             {
5512                 \__enumext_filter_first_level:n {#1}
5513             }
5514         } ,
5515     keyans* .code:n = { \keys_set:nn { enumext / keyans* } {#1} } ,
5516     print* .code:n = { \keys_set:nn { enumext / print } { print* = {#1} } } ,
5517     print-1 .code:n = { \keys_set:nn { enumext / print } { print-1 = {#1} } } ,
5518     print-2 .code:n = { \keys_set:nn { enumext / print } { print-2 = {#1} } } ,
5519     print-3 .code:n = { \keys_set:nn { enumext / print } { print-3 = {#1} } } ,
5520     print-4 .code:n = { \keys_set:nn { enumext / print } { print-4 = {#1} } } ,
5521     print-* .code:n = { \keys_set:nn { enumext / print } { print-* = {#1} } } ,
5522     unknown .code:n = { \msg_error:nn { enumext } { unknown-key-family } } ,
5523 }

```

We store them in the constant sequence `\c__enumext_all_families_seq` separated by commas.

```

5524 \seq_const_from_clist:Nn \c__enumext_all_families_seq
5525 {
5526     enumext-1, enumext-2, enumext-3, enumext-4, keyans, enumext*,
5527     keyans*, print-1, print-2, print-3, print-4, print-*, print*,
5528 }

```

`\setenumext`

Now we define the user command `\setenumext`.

```

\__enumext_set_parse:n
\__enumext_set_error:nn
5529 \NewDocumentCommand \setenumext { 0{enumext,1} +m }
5530 {

5554 }
5555 }

```

Internal functions used by the `\setenumext` command.

```

5556 \cs_new_protected:Npn \__enumext_set_parse:n #1
5557 {
5558     \tl_set:Ne \l__enumext_setkey_tmpb_tl { \tl_trim_spaces:n {#1} }
5559     \clist_map_inline:nn { 0, 1, 2, 3, 4, * } % <- max level
5560     { \tl_remove_all:Nn \l__enumext_setkey_tmpb_tl {##1} }
5561     \tl_if_empty:NTF \l__enumext_setkey_tmpb_tl
5562     {
5563         \seq_put_right:Ne \l__enumext_setkey_tmpa_seq
5564         { \tl_trim_spaces:n {#1} }
5565     }
5566     { \__enumext_set_error:nn {#1} { } }
5567 }
5568 \cs_new_protected:Npn \__enumext_set_error:nn #1 #2
5569 { \msg_error:nnn { enumext } { invalid-key } {#1} {#2} }

```

(End of definition for `\setenumext`, `__enumext_set_parse:n`, and `__enumext_set_error:nn`. This function is documented on page 6.)

13.50 The command `\setenumextmeta`

The command `\setenumextmeta` will be responsible for adding new “meta-keys” for the `enumext` and `enumext*` environments. The implementation code was given by Jonathan P. Spratte (@Skillmon) answer in [Add .meta key to existing keys \(l3keys\)](#).

`\setenumextmeta`

First we will create a prop list `\c__enumext_meta_paths_prop` to handle the *optional argument*.

```

\c__enumext_meta_paths_prop
\__enumext_add_meta_key:nnn
\__enumext_def_meta_key:nnn
\__enumext_def_meta_key:Vnn
5570 \prop_const_from_keyval:Nn \c__enumext_meta_paths_prop
5571 {
5572     {enumext,1} = level-1,
5573     {enumext,2} = level-2,
5574     {enumext,3} = level-3,
5575     {enumext,4} = level-4,
5576     {enumext*} = enumext*
5577 }

```

Now we create the user command taking care that unknown cannot be passed as an argument.

```

5578 \NewDocumentCommand \setenumextmeta { s O{enumext,1} m +m }
5579 {
5580     \str_if_eq:eeTF { \tl_trim_spaces:n {#3} } { unknown }
5581     { \msg_error:nn { enumext } { prohibited-unknown } }
5582     {
5583         \bool_if:nTF {#1}
5584         {
5585             \int_step_inline:nn { 4 }
5586             { \__enumext_add_meta_key:nnn { enumext, ##1 } {#3} {#4} }
5587             \__enumext_add_meta_key:nnn { enumext* } {#3} {#4}
5588         }
5589         { \__enumext_add_meta_key:nnn {#2} {#3} {#4} }
5590     }
5591 }

```

The internal functions `__enumext_add_meta_key:nnn` and `__enumext_def_meta_key:nnn` will check the *optional argument* and create the “meta-key”.

```

5592 \cs_new_protected:Npn \__enumext_add_meta_key:nnn #1
5593 {

```

```

5594 \tl_set:Nn \l__enumext_meta_path_tl {#1}
5595 \tl_replace_all:Nnn \l__enumext_meta_path_tl {~} {}
5596 \prop_get:NVNTF
5597 \c__enumext_meta_paths_prop \l__enumext_meta_path_tl \l__enumext_meta_path_tl
5598 { \__enumext_def_meta_key:Vnn \l__enumext_meta_path_tl }
5599 {
5600   \msg_error:nnn { enumext } { unknown-set } {#1}
5601   \use_none:nn
5602 }
5603 }
5604 \cs_new_protected:Npn \__enumext_def_meta_key:nnn #1#2#3
5605 {
5606   \bool_lazy_or:nnTF
5607   { \keys_if_exist_p:nn { enumext / #1 } {#2} }
5608   { \keys_if_exist_p:nn { enumext / enumext* } {#2} }
5609   { \msg_error:nnn { enumext } { already-defined } {#2} }
5610   {
5611     \keys_define:nn { enumext / #1 }
5612     {
5613       #2 .meta:n = {#3},
5614       #2 .value_forbidden:n = true
5615     }
5616   }
5617 }
5618 \cs_generate_variant:Nn \__enumext_def_meta_key:nnn { V }

```

(End of definition for `\setenumextmeta` and others. This function is documented on page 6.)

13.51 The command `\foreachkeyans`

The command `\foreachkeyans` will execute a *loop* over the *prop list* and return its contents. The implementation code is adapted from the answer provided by Enrico Gregorio (@egreg) in [Expand a .cs defined by key inside the function](#).

`\foreachkeyans`

```

\__enumext_parse_foreach_keys:nn
\__enumext_parse_foreach_keys:n
\__enumext_foreach_keyans:nn
\__enumext_foreach_add_body:n

```

We define a set of *⟨keys⟩* for command and we will save the default values of these in `\g__enumext_foreach_default_keys_tl` to avoid the use of group.

```

5619 \keys_define:nn { enumext / foreach }
5620 {
5621   before .tl_set:N = \l__enumext_foreach_before_tl,
5622   before .value_required:n = true,
5623   after .tl_set:N = \l__enumext_foreach_after_tl,
5624   after .value_required:n = true,
5625   start .int_set:N = \l__enumext_foreach_start_int,
5626   start .value_required:n = true,
5627   stop .int_set:N = \l__enumext_foreach_stop_int,
5628   stop .value_required:n = true,
5629   step .int_set:N = \l__enumext_foreach_step_int,
5630   step .value_required:n = true,
5631   wrapper .cs_set_protected:Np = \__enumext_foreach_wrapper:n #1,
5632   wrapper .value_required:n = true,
5633   sep .tl_set:N = \l__enumext_foreach_sep_tl,
5634   sep .value_required:n = true,
5635   unknown .code:n = { \__enumext_parse_foreach_keys:n {#1} }
5636 }
5637 \keys_precompile:nnN { enumext / foreach }
5638 {
5639   before={},after={},start=1,step=1,stop=0,wrapper=#1,sep={; }
5640 }
5641 \l__enumext_foreach_default_keys_tl

```

Functions for handling unknown *⟨keys⟩*.

```

5642 \cs_new_protected:Npn \__enumext_parse_foreach_keys:nn #1#2
5643 {
5644   \tl_if_blank:nTF {#2}
5645   {
5646     \msg_error:nnn { enumext } { for-key-unknown } {#1}
5647   }
5648   {
5649     \msg_error:nnnn { enumext } { for-key-value-unknown } {#1} {#2}
5650   }
5651 }
5652 \cs_new_protected:Npn \__enumext_parse_foreach_keys:n #1

```

```

5653 {
5654   \exp_args:NV \__enumext_parse_foreach_keys:nn \l_keys_key_str {#1}
5655 }

```

We create the command.

```

5656 \NewDocumentCommand \foreachkeyans { +0{ } m }
5657 {
5658   \__enumext_foreach_keyans:nn {#1} {#2}
5659 }

```

Finally the internal functions `__enumext_foreach_keyans:nn` and `__enumext_foreach_add_body:n` will loop through the prop list and print the contents.

```

5660 \cs_new_protected:Npn \__enumext_foreach_keyans:nn #1 #2
5661 {
5662   \tl_use:N \__enumext_foreach_default_keys_tl
