CTAN: https://www.ctan.org/pkg/enumext
 https://github.com/pablgonz/enumext

Abstract

This package provides enumerated list environments compatible with *tagging PDF* for creating "simple exercise sheets" along with "multiple choice questions", storing the "answers" to these in memory using multicol package.

Contents

Motivation and acknowledgments

Usually it is enough to use the classic enumerate environment to generate "simple exercise sheets" or "multiple choice questions", the basic idea behind enumext is to cover three points:

- 1. To have a simple interface to be able to write "lists of exercises" with "answers".
- 2. To have a simple interface for writing "multiple choice questions".
- 3. To have a simple interface for placing "columns" and "drawings" or "tables".

This package would not be possible without Phelype Oleinik who has collaborated and adapted a large part of the code and all Large TeX team for their great work and to the different members of the TeX-SX community who have provided great answers and ideas. Here a note of the main ones:

- 1. Answer given by Alan Munn in \topsep, \itemsep, \partopsep, \parsep what do they each mean (and what about the bottom)?
- 2. Answer given by Enrico Gregorio in Understanding minipages aligning at top
- 3. Answer given by Ulrich Diez in Different mechanics of hyperlink vs. hyperref
- 4. Answer given by Enrico Gregorio in Minipage and multicols, vertical alignment

License and Requirements

Permission is granted to copy, distribute and/or modify this software under the terms of the LaTeX Project Public License (lppl), version 1.3 or later (https://www.latex-project.org/lppl.txt). The software has the status "maintained".

The enumext package loads and requires multicol[?] package, need to have a modern TeX distribution such as TeX Live or MiKTeX. It has been tested with the standard classes provided by Lagar book, report, article and letter on 10pt, 11pt and 12pt.

The minimum requirement is ETFX release 2025-06-01.

1 Introduction

In the LTEX world there are many useful packages and classes for creating "lists of exercises", "worksheets" or "multiple choice questions", classes like exam[?] and packages like xsim[?] do the job perfectly, but they don't always fit the basic day to day needs.

In my work (and in the work of many teachers) it is common to use "simple exercise sheets" also known as "informal lists of exercises", as an example:

- 1. Factor $x^2 2x + 1$
- 2. Factor 3x + 3y + 3z
- 3. True False
 - (a) $\alpha > \delta$
 - (b) LaTeX2e is cool?
- 4. Related to Linux

- (a) You use linux?
- (b) Usually uses the package manager?
- (c) Rate the following package and class
 - i. xsim-exam
 - ii. xsim
 - iii. exsheets

Sometimes we are also interested in showing the "answers" along with the questions:

^{*}This file describes a documentation for v1.5, last revised 2025-06-15.

[†]E-mail: «pablgonz@educarchile.cl».

enumext v1.5 §.1 Introduction

> 1. Factor $x^2 - 2x + 1$ (a) You use linux? $(x-1)^{2}$ Yes (b) Usually uses the package manager? 2. Factor 3x + 3y + 3z* Yes, dnf 3(x+y+z)(c) Rate the following package and class 3. True False xsim-exam (a) $\alpha > \delta$ doesn't exist for now :(* | False xsim (b) LATEX2e is cool? very good * | Very True! exsheets 4. Related to Linux obsolete

Or we are interested in referring to a specific question and its "answer", for example:

The answer to ?? is "Very True!" and the answer to ?? is "very good".

Or we are interested in printing all the "answers":

```
1. (x-1)^2
                                                            (b) Yes, dnf
2. 3(x+y+z)
                                                            (c) i.
                                                                     doesn't exist for now :(
3. (a) False
                                                                ii.
                                                                   very good
                                                       ×
  (b) Very True!
                                                       :
                                                                iii. obsolete
4. (a) Yes
```

Another very common thing to use in my work is "multiple choice questions", for example:

- 1. First type of questions
 - A) value
- C) value
- B) correct
- D) value
- 2. Second type of questions

I.
$$2\alpha + 2\delta = 90^{\circ}$$

II.
$$\alpha = \delta$$

III.
$$\angle EDF = 45^{\circ}$$

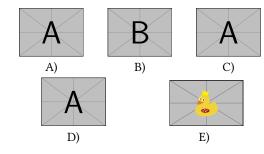

- A) I only
- D) I and III only
- B) II only
- E) I, II, and III
- C) I and II only
- \star 3. Third type of questions

(1)
$$2\alpha + 2\delta = 90^{\circ}$$

(2)
$$\angle EDF = 45^{\circ}$$

- A) value
- D) value
- C) value
- B) value E) value

4. Question with image and label below:

- 5. Question with image on right side:
 - A) value
 - B) value
 - C) value
 - D) correct
 - E) value

Where what we are interested in the $\langle label \rangle$ and a "short note" that we leave as an explanation, and then print them:

```
1. B) x = 5

※ 4. E) A duck

2. D)
                                          3. C) some note
```

The enumext package was created and designed to meet these small requirements in the creation of "simple worksheets" and "multiple choice questions".

🍼 These "simple worksheets" or "multiple choice questions" appear to be easy to obtain using a combination of the enumerate, minipage and multicols environments, but like many things, what "looks simple" is not so simple.

Description and usage

The enumerat package defines enumerated environments using the list environment provided by LTPX, but "does not redefine" any internal commands associated with it such as \list, \endlist or \item outside of the "scope" in which they are defined.

🍼 This package is NOT intend to replace the enumerate environment nor replace the powerful enumitem[?], the approach is intended to work without hindering either of them.

This package can be used with xelatex, lualatex, pdflatex and the classical latex. dvips. ps2pdf and is present in TFX Live and MiKTFX, use the package manager to install. For manual installation, download enumext.zip and unzip it, run luatex enumext.ins and move all files to appropriate locations, then run mktexlsr. To produce the documentation run arara enumext.dtx.

```
enumext.sty » TDS:tex/latex/enumext/
README.md
        » TDS:doc/latex/enumext/
```

enumext v1.5 §.1 Introduction

The package is loaded in the usual way:

```
\usepackage{enumext}
```

1.2 The concept of left margin

There is a direct relationship between the parameters \leftmargin, \itemindent, \labelwidth and \labelsep plus an "extra space" that makes it difficult to obtain the desired horizontal spaces in a list environment. Usually we don't want the list to go beyond the left margin of the page, but since these four values are related, that causes a problem.

The enumitem[?] package adds the \labelindent parameter to solve some of these problems. A simplified representation of this in the figure ??.

Figure 1: Representation of horizontal lengths in enumitem.

The enumext package does NOT provide a user interface to set the values for \leftmargin and \itemindent, instead it provides the keys list-offset and list-indent which internally set the values for \leftmargin and \itemindent. The concepts of \leftmargin and \itemindent are different in enumext. The figure ?? shows the visual representation of idea.

Figure 2: Representation of horizontal lengths concept in enumext.

In this way we reduce a *little* the amount of parameters we have to pass. With the default values of keys list-offset, list-indent, labelwidth and labelsep the lists will have the (usually) expected output for "simple worksheets". The figure ?? shows the visual representation.

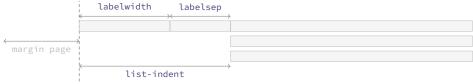

Figure 3: Default horizontal lengths list-offset=0pt, list-indent=\labelwidth+\labelsep in enumext.

1.3 User interface

The user interface consists of two main list environments enumext (vertical) and enumext* (horizontal), the environment anskey* and the command \anskey to "store content" and the environments keyans, keyans* and keyanspic for multiple choice. It also provides the commands \getkeyans to print individual stored content, \printkeyans and \foreachkeyans to print all stored content, \miniright for minipage, \setenumext and \setenumextmeta to config $[\langle key = val \rangle]$ options.

1.3.1 Internal counters

The package enumext uses internally the enumXi, enumXii, enumXiii, enumXiv counters for the four nesting levels of the enumext environment, the enumXv counter for the keyans environment, the enumXvi counter for the keyanspic environment, the counter enumXviii for enumext* environment and the counter enumXviii for keyans* environment.

If any package defines these counters or they are user-defined in the document, the package will return a fatal error and abort the load.

1.3.2 Public dimension

The package enumext only provides a single public dimension \itemwidth and is intended for user convenience only and is not for internal use as such. The dimension \itemwidth is rigid length and contains the "width of the content" of each \item regardless of labelwidth and labelsep.

If any package defines \itemwidth or they are user-defined \itemwidth in the document, the package will overwrite it without warning.

enumext v1.5 §.1 Introduction

1.3.3 Support for multicol

The package provides direct support for using the multicol[?] package. This allows to obtain directly a two-column output as shown in the figure ??.

Figure 4: Representation of the two column output for a nested level in enumext environment.

The "non starred" version of the multicols environment is always used together with the \raggedcolumns command and is controlled by columns and columns-sep keys. It can be used in all nesting levels of the environment enumext and the environment keyans and can together with the mini-env key. If you need to force a start a new column \columnbreak must be used (see §??).

The \columnseprule command is not available as a key and is set to "zero" for the inner levels and the keyans environment. If the value of this is set inside the document, it will affect "all environments" that use the columns key.

1.3.4 Support for minipage

The package provides direct support for minipage environment, this allows you to obtain an output like the one shown in figure ??.

Figure 5: Representation of the mini-env output for a nested level enumext environment.

The minipage environments on "left side" and "right side" is always used with "aligned on top" [t]. It can be used in all nesting levels of the environment enumext and the environment keyans and is controlled by mini-env and mini-sep keys. In order to switch from the "left" side minipage environment to the "right" side one must use the command \miniright (see §??).

1.3.5 The \label and \ref system

This package provides a user interface like the enumitem[?] package to customize the references which is activated by the ref key (§??), the standard ETEX \label and \ref commands work as usual. It also provides an "internal reference" system for the "stored content" by means of the key save-ref (§??) when the key save-ans (§??) is active.

1.3.6 Support for \footnote

The enumext* and keyans* environments and the mini-env key use the minipage environment in their implementation but in a transparent way for the user, i.e. it is only used for typesetting and not directly. The enumext package provides an *internal implementation* for the command \footnote compatible with the hyperref package to work in the same way as if it were used anywhere in the document.

Unfortunately, if tagging PDF is not enabled, it will not produce the expected "links" because the internal implementation uses $\footnotetext[\langle number \rangle]$ and $\footnotemark[\langle number \rangle] \{\langle text \rangle\}$ and support for these is limited by the hyperref package.

The best way to solve this if tagged PDF is NOT active is to use Jean-François Burnol footnotehyper[?] package, it will support keeping the "links" if hyperref is loaded with the hyperfootnotes=true option (default). Load it is as follows:

```
\IfDocumentMetadataF
    \usepackage{footnotehyper}
    \makesavenoteenv{enumext}
    \makesavenoteenv{enumext*}
```

At the moment the footnotehyper package is not compatible with tagged PDF.

The environments provided

The package enumext provides two main list environments, the *vertical* environment enumext and the *horizontal* environment enumext*.

```
enumext*
```

```
enumext \begin{enumext}[\langle keyval \ list \rangle]
                                                                                                                               \begin{enumext*} [\langle keyval \ list \rangle]
                      \item \langle item content \rangle
                                                                                                                                  \item \langle item content \rangle
                      \item \lceil \langle custom \rangle \rceil \langle item content \rangle
                                                                                                                                   \item \lceil \langle custom \rangle \rceil \langle item content\rangle
                      \forall item^* [\langle symbol \rangle] [\langle offset \rangle] \langle item content \rangle
                                                                                                                                  \forall item^*[\langle symbol \rangle][\langle offset \rangle] \langle item content \rangle
                   \end{enumext}
                                                                                                                                \end{enumext*}
```

The environment enumext

The enumext is an environment that works in the same way as the standard enumerate environment provided by LTX, \item and \item[\langle custom \rangle] commands work in the usual way. The environment can be nested with at most "four levels" and the options can be configured globally using \setenumext command and locally using $\lceil \langle key = val \rangle \rceil$ in the environment.

Example with columns=2

1. This text is in the first level.

A. This text is in the fourth level.

- (a) This text is in the second level.
- X This text is in the first level.
- This text is in the third level.
- ★ 2. This text is in the first level.

The environment enumext*

The enumext* is a horizontal list environment similar to the shortenumerate or tasks environments provided by the shortlst[?] and tasks[?] packages, \item and \item[$\langle custom \rangle$] work as usual. The options can be configured globally using \setenumext command and locally using $\lceil \langle key = val \rangle \rceil$ in the environment.

Some considerations to take into account for this environment:

- The environment cannot be nested within itself or in the environment keyans*, but it can be nested within enumext and vice versa.
- Each "item content" in the environment is placed within a minipage environment whose width is stored in the dimension \itemwidth that NOT includes labelwith, labelsep, only the width of the content.
- You cannot have floating environments like figure or table but \footnote with hyperref support is supported if the footnotehyper package is loaded (see §?? for full support).
- · You cannot have any standard list environments like itemize, enumerate, description, quote, quotation, verse, center, flushleft, flushright, verbatim, tabbing, trivlist, list and all environments created with \newtheorem.

Example with columns=2

1. This text is in the first level.

2. This text is in the first level.

X This text is in the first level.

 \star 4. This text is in the first level.

2.3 The command \item*

```
\forall item* \forall [\langle symbol \rangle] [\langle offset \rangle]
```

The $\idetimes_{item*}, item*[\langle symbol \rangle]$ and \idetimes_{item* a $\langle symbol \rangle$ to the "left" of the $\langle label \rangle$ separated from it by the $\langle offset \rangle$ set by the the second optional argument.

The starred argument '*' cannot be separated by spaces 'u' from the command, i.e. \item* and the first optional argument does "NOT" support verbatim content. Can be configure with the keys item-sym* and item-pos* locally in the environment or globally using \setenumext command (§??).

environments.

2.3.1 Keys for \item*

```
item-sym* = \{\langle symbol \rangle\}
```

default: \textborn

Sets the *symbol* to be displayed in the "left" of the box containing the current $\langle label \rangle$ set by labelwidth key for \item* in enumext and enumext*. The symbol can be in text or math mode, for example item $sym*={\$\setminus star\$}.$

```
item-pos* = {\langle rigid \ length \rangle}
```

default: by levels

Sets the *offset* between the box containing the current $\langle label \rangle$ defined by labelwidth key and the $\langle symbol \rangle$ set by item-sym* key. The default values are set by labelsep key at each level. If positive values are passed it will offset to the left and if negative values are passed it will offset to the right.

The command \item in enumext*

The \item command for the enumext* environment provides an "first optional argument" \item (\langle columns \rangle) which "joins items" between columns. Let's consider the following examples adapted directly from the task package:

```
\begin{enumext*}[widest=10,columns=4]
  \item The first
  \item* The second
  \item The third
  \item The fourth
  \forall (3)* The fifth item is way too long for this and needs three columns
  \item The sixth
  \item The seventh
  \item(2)[X] The eighth item is way too long for this and needs two columns
   (\the\itemwidth)
 \item The ninth
 \item[Z] The tenth (\the\itemwidth)
\end{enumext*}
```

- 1. The first
- \star 2. The second
- 3. The third
- 4. The fourth
- \star 5. The fifth item is way too long for this and needs three columns
- 6. The sixth
- X The eighth item is way too long for this and needs 9. The ninth two columns (196.17749pt)
- The tenth (89.28171pt)

The command \setenumext

```
\setenumext \setenumext{\langle key = val \rangle}
                                                                                                                                          \star{keyans*} \{\langle keyans* \rangle \}
                          \strut = \sum \{\langle enumext, level \rangle \} \{\langle key = val \rangle \}
                                                                                                                                          \start \setenumext[\langle print, level \rangle] {\langle key = val \rangle}
                          \startion{1}{\text{setenumext}[\langle enumext^* \rangle] \{\langle key = val \rangle\}}
                                                                                                                                          \startion{1}{\text{setenumext}[\langle print, * \rangle] \{\langle key = val \rangle\}}
                          \star{\exists keyans} \ \{ \langle key = val \rangle \}
                                                                                                                                          \startion{1}{\text{setenumext}}[\langle print^* \rangle] \{\langle key = val \rangle\}
```

The command \setenumext sets the $\langle keys \rangle$ on a global basis for environments enumext, enumext*, keyans, keyans* and the \printkeyans command. It can be used both in the preamble and in the body of the document as many times as desired.

The \(\lambda \text{keys} \rangle \) set in the optional argument of environments and commands have the highest precedence, overriding both options passed by \setenumext. If the optional argument is not passed, the first level of the environment enumext will be taken by default.

🍼 The key save-ans that activate the *"storage system"* must NOT be passed through this command and must be passed directly in the optional argument of the "first level" of the environment in which they are executed.

The command \setenumextmeta

```
\setenumextmeta \setenumextmeta \{\langle key \ name \rangle\} \{\langle key \ one = val, \ key \ two = val, \ldots \rangle\}
                     \setenumextmeta*{\langle key name \rangle}{\langle key-one = val, key-two = val, ... \rangle}
                     \setenumextmeta [\langle enumext^* \rangle] \{\langle key \ name \rangle\} \{\langle key \ one = val, \ key \ two = val, \dots \rangle\}
```

The command \setenumextmeta adds a new "meta-key" for the environments enumext and enumext*, the {\langle key name \rangle} must be different from those defined by the package. If the optional argument is not passed, the new "meta-key" will be created for the "first level" of the environment enumext.

The starred argument '*' will create the new "meta-key" for the environment enumext* and for all levels of the environment enumext. For example: \setenumextmeta*{midsep}{topsep=3pt, partopsep=0pt} will create a new key midsep available for all levels of the enumext environment and the enumext* environment and we can use it like any other key so \begin{enumext} [midsep] and \begin{enumext*} [midsep] will be valid.

5 The keyval system

The $\langle key = val \rangle$ system used by the enumext package is implemented using lakeys so it must be taken into consideration that those keys marked as "value forbidden", that is $\langle key \rangle$ is different from $\langle key = \rangle$.

All \(\lambda keys\rangle\) described in this section are available for the enumext, enumext*, keyans and keyans* environments with the exception of the keys series, resume, resume* which are only available for the "first level" of the environments enumext and enumext*; and the keys mini-right, mini-right* which are only available for the enumext* and keyans* environments.

All $\langle keys \rangle$ related to vertical or horizontal spacing accept a "skip" or "dim" expression if passed between braces, i.e. you do not need to use \dimeval or \dimexpr to perform calculations.

It should be kept in mind that using any $\langle key \rangle$ that sets a *rubber lengths* or *rigid lengths* for vertical or horizontal space on a level will influence the vertical and horizontal space for *inners levels* and keyans, keyans* and keyanspic environments.

5.1 Keys for label and ref

mode-box \(\value \) forbidden

default: not used

This is a "switch-key" that does not receive an argument and is "only" available for the "first level" of the enumext environment and the enumext* environment. When this is set the label, font, wrap-label and wrap-label* keys are executed within \makebox for the enumext and keyans environments.

- This key is intended for compatibility with tagged PDF and is forcibly "enabled" when \DocumentMetadata is present. If you want to get the same document output whether \DocumentMetadata is active or not, you must enable this key.
- In the enumext* and keyans* environments \makelabel are redefined using \makebox by default. If enumext or keyans is used in the enumext* environment the key must be activated manually.

```
label = {\\alph* | \Alph* | \arabic* | \roman* | \Roman* \}
```

default: by levels

Sets the $\langle label \rangle$ that will be printed at the *current level* and default value for labelwidth key. The default value for the first level of the environments enumext and enumext* are \arabic*., for second level are (\alph*), for third level are \roman*. and for fourth level are \Alph*.. For keyans and keyans* environments the default value is \Alph*).

This key is intended to give the basic structure with which the $\langle label \rangle$ will be displayed, and the form in which it is used by standard "label and ref" and the "internal label and ref" system with the save-ref key. You cannot use commands with $\langle label \rangle$ as an argument, for example $\{ \langle alph^* \rangle \}$ will return an error. For full customization of how $\langle label \rangle$ is displayed use the font, wrap-label and/or wrap-label* keys.

```
labelsep = \{ \langle rigid \ length \rangle \}
```

default: 0.3333em

Sets the *horizontal space* between the box containing the current $\langle label \rangle$ defined by label key and the text of an item on the first line. Internally sets the value of \labelsep for the current level.

```
labelwidth = \{ \langle rigid \ length \rangle \}
```

default: by lab

Sets the width of the box containing the current $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ set by the label key. Internally sets the value of $\langle label \rangle$ sets the

```
widest = \{ \langle integer \mid string \rangle \}
```

default emots

Sets the labelwidth key pass the $\langle integer \rangle$ or converting the $\langle string \rangle$ of the form \Alph, \alph, \Roman or \roman to a *value* for the current counter defined by label key, then calculating the *width* by means of a box. For example widest={XXIII} or widest={23} are equivalent. This key is useful when the default values of the labelwidth key are smaller than those actually used.

```
font = \{\langle font \ commands \rangle\}
```

default: empty

Sets the *font style* for the current $\langle label \rangle$ defined by label key. For example font={\bfseries\small}.

```
\texttt{align} = \{ \langle \mathit{left} \mid \mathit{right} \mid \mathit{center} \rangle \}
```

default: left

Sets the *aligned* of $\langle label \rangle$ defined by label key on the current level in the label box.

```
wrap-label = \{\langle code \{ #1 \} \ more \ code \rangle \}
```

default: empty

Wraps the *current* $\langle label \rangle$ defined by label key referenced by $\{\#1\}$ after executing the align and font keys. The $\{\langle code \rangle\}$ must be passed between braces and this does not modify the value set by the labelwidth key and is applied *only* on \item and \item*. When using it in the \setenumext command it is necessary to use the *double* ' $\{\#1\}$ '. For example wrap-label= $\{\footnotem]$ or you can create a command:

```
\NewDocumentCommand \mywrap { s m }
{
   \IfBooleanTF{#1}
     {\textcolor{red}{\textbf{Q}}\textcolor{blue}{\textbf{.}}\textcolor{gray}{#2}}
     {\textcolor{blue}{\textbf{Q}}\textcolor{red}{\textbf{.}}\textcolor{gray}{#2}}
}
```

and then pass it through the key wrap-label={\mywrap{#1}} or wrap-label={\mywrap*{#1}}.

```
wrap-label^* = \{\langle code \{ #1 \} \ more \ code \rangle\}
```

default: empty

The same as the wrap-label key but also applies on $\lceil \langle custom \rangle \rceil$.

```
ref = \{ \langle code \ \{ \alph^* | \arabic^* |
```

default: empty

Modifies the way *cross references* are displayed. The label key sets the default form of the *cross references*, by using this key you can define a different format, for example: $ref=\ensuremath{\mathsf{ref}}\xspace \ensuremath{\mathsf{membh}}\xspace \xspace \xsp$

Internally it renews the command associated with each counter when it is executed, i.e., in the environment enumext the command \theenumXi is modified when the key is executed at the first level, \theenumXii when it is executed at the second level and \theenumXiii together with \theenumXiv when it is executed at the third and fourth levels.

This must be kept in mind, since the values set by the label and ref keys are not cumulative by levels, so if you have used the ref key in the first level and then want to associate the counter with label or ref in the second level you must use the direct commands, i.e. \arabic{eunumXi} to indicate the count of the first level instead of using \theenumXi.

5.2 Keys for penalties

Page breaks in the provided environments are controlled by the following three parameters, which work together to ensure they look good, avoiding unsightly page breaks that could distort the output.

```
\texttt{beginpenalty} = \{\langle \mathit{integer} \rangle\}
```

default: -51

Set the *page breaking* penalty for breaking at the beginning of the enumext, enumext*, keyans, and keyans* environments. Internally sets the value of \@beginparpenalty.

```
midpenalty = \{ \langle integer \rangle \}
```

default: -51

Set the *page breaking* penalty for breaking between items of the enumext, enumext*, keyans, and keyans* environments. Internally sets the value of \@itempenalty.

```
endpenalty = \{\langle integer \rangle\}
```

default: -51

Set the *page breaking* penalty for breaking at the end of the enumext, enumext*, keyans, and keyans* environments. Internally sets the value of \@endparpenalty.

The values passed to these \(\lambda \text{keys}\rangle\) affect the nested environments in which they were set and cannot be reset. The default is -\@lowpenalty, that is, -51. Because it is negative, it somewhat encourages a page break at each spot. Change it with, e.g., \@beginparpenalty=9999; a value of 10000 prohibits a page break. Please, refer to your The manual about how penalties control page breaks.

5.3 Keys for spaces

```
\mathsf{show-length} = \{ \langle \mathit{true} \mid \mathit{false} \rangle \}
```

default: false

Displays on the terminal the values for *all list parameters* at the current level. For *vertical spaces* show the values of \topsep, \itemsep, \parsep and \partopsep. For *horizontal spaces* show the values of \labelwidth, \labelsep, \itemindent, \listparindent and \leftmargin.

5.3.1 Vertical spaces

```
\texttt{topsep} = \{ \left< \textit{rubber length} \mid \textit{rigid length} \right> \}
```

default: by levels

Set the *vertical space* added to both the top and bottom of the list. Internally sets the value of \topsep for the current level. The default value for the first level of the environments enumext and enumext* are 8.0pt plus 2.0pt minus 4.0pt, for second level are 4.0pt plus 2.0pt minus 1.0pt, for third and fourth level are 2.0pt plus 1.0pt minus 1.0pt. For keyans and keyans* environments the default value is 4.0pt plus 2.0pt minus 1.0pt.

```
parsep = \{ \langle rubber \ length \mid rigid \ length \rangle \}
```

default: by levels

Set the *vertical space* between paragraphs within an item. Internally sets the value of \parsep for the current level. The default value for the first level of the environments enumext and enumext* are 4.0pt plus 2.0pt minus 1.0pt, for second level are 2.0pt plus 1.0pt minus 1.0pt, for third and fourth level are 0pt. For keyans and keyans* environments the default value is 2.0pt plus 1.0pt minus 1.0pt.

In the enumext* and keyans* environments this value is passed to \parskip within the minipage environment where "item content" is placed.

```
partopsep = \{ \langle rubber \ length \mid rigid \ length \rangle \}
```

default: by level:

Set the *vertical space* added, beyond topsep, to the "top" and "bottom" of the entire environment if the environment instance is preceded by a "blank line" or \par command. Internally sets the value of \partopsep for the current level. The default values for first and second level in environment enumext are 2.0pt plus 1.0pt minus 1.0pt, for third and fourth level are 1.0pt minus 1.0pt. For the keyans environment the default value is 2.0pt plus 1.0pt minus 1.0pt, and for the keyans* and enumext* environments it is available but *without* effect.

The value of this parameter also affects the *inner levels* and the environments keyans, keyanspic and keyans*. Caution should be taken with "blank lines" or \par command "before" each environment or nested level when formatting the source code of document. Tex will enter \(\frac{vertical mode}{\text{and}}\) and apply this value to the "top" and "bottom" the environment or nested level.

```
itemsep = \{ \langle rubber \ length \ | \ rigid \ length \rangle \}
```

default: by levels

Set the *vertical space* between items, beyond the parsep. Internally sets the value of \itemsep for the current level. The default value for the first level of the environments enumext and enumext* are 4.0pt plus 2.0pt

minus 1.0pt, for the rest of the levels are 2.0pt plus 1.0pt minus 1.0pt. For keyans and keyans* environments the default value is 4.0pt plus 2.0pt minus 1.0pt.

of In the enumext* and keyans* environments this value corresponds to the separation between rows.

noitemsep (value forbidden)

default: not used

This is a "meta-key" that does not receive an argument. Set itemsep and parsep equal to Opt the entire level of environment.

nosep (value forbidden)

default: not used

This is a "meta-key" that does not receive an argument. Sets all keys for vertical spacing equal to opt the entire level of environment.

base-fix (value forbidden)

default: not used

This is a "switch-key" that does not receive an argument available only for the "first level" of environment enumext. Fix the baseline when an environment enumext is nested in enumext* and there is no material between the \item and the start of the environment for example \item \begin{enumext} enumext} within the environment enumext*. Internally sets the keys topsep, above and above* at Opt.

This key is provided as a way to work around this minor issue, but you should be aware that if for some reason you have the itemindent key set in the enumext* environment it will be lost and you will need to adjust it using the list-offset key in the enumext environment.

Extra vertical spaces

The following \(\lambda \text{keys} \rangle \) should be used with "caution", they are intended to be used at the "top" and "bottom" of the environment when the columns or mini-env keys do not provide adequate vertical spaces. The values passed can be rubber or rigid lengths, the way they are applied is the way you differ, using the star '*' \(\lambda \text{keys} \rangle \) applies \vspace* so that \(\text{MTFX} \text{ does not discard} \) this space at page break.

```
above = \{\langle rubber\ length \mid rigid\ length \rangle\}
```

default: not used

Set the *extra vertical space* added, beyond topsep, to the top of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space *"above"* the environment without hindering the value of the topsep key. The space is added with \vspace so is *"discardable"*.

 $above* = \{ \langle rubber\ length \mid rigid\ length \rangle \}$

default: not used

Set the *extra vertical space* added, beyond topsep, to the top of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space *"above"* the environment without hindering the value of the topsep key. The space is added with \vspace* so is *"not discardable"*.

```
below = \{ \langle rubber \ length \ | \ rigid \ length \rangle \}
```

default: not used

Set the *extra vertical space* space added, beyond topsep, to the bottom of the entire level of environment. This key is intended to give a "*fine adjustment*" of the vertical space on the "*below*" the environment without hindering the value of the topsep key. The space is added with \vspace so is "*discardable*".

```
below* = \{\langle rubber\ length \mid rigid\ length \rangle\}
```

default: not use

Set the *extra vertical space* space added, beyond topsep, to the bottom of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space on the *"below"* the environment without hindering the value of the topsep key. The space is added with \vspace* so is *"not discardable"*.

5.3.2 Horizontal spaces

 $list-offset = \{ \langle rigid\ length \rangle \}$

default: opt

Sets the *horizontal translation* of the entire environment level from the left edge of the box defined by the labelwidth key. Internally sets the values of \leftmargin and \itemindent for the current level.

list-indent = $\{\langle rigid\ length\rangle\}$

default: *labelwidth* + *labelsep*

Sets the *indentation* of the whole environment under the box defined by labelwidth and labelsep keys. Internally sets the value of \leftmargin and \itemindent for the current level. If list-indent=0pt is set in the environments enumext and keyans the $\langle label \rangle$ will be part of the text, separated by the value of the labelsep key and the *first word*, in simple terms it will look like a *"common paragraph"*.

The enumext* and keyans* environments are implemented using \makebox and minipage which causes "list indent" to always be equal to the value passed to labewdith plus labelsep. Passing a value to this key is equivalent to setting the value for the list-offset key.

 $itemindent = \{\langle rigid \ length \rangle\}$

default: 0pt

Sets the extra *horizontal indentation*, beyond labelsep, of the "first line" off each \item that is not followed by a "blank line" or the \par command. This value must be greater than or equal to Opt and is applied internally using \hspace without modifying the value of \itemindent.

This key is intended for the enumext* and keyans* environments where, by their implementation, it is not possible to adjust labelwidth and list-indent without modifying the output. If you use enumext or keyans and want to get around the blank line limitation or the \par command followed by \item you can modify labelwidth and list-indent and get the same effect.

```
rightmargin = \{ \langle rigid \ length \rangle \}
```

default: opt

Set the *horizontal space* between the right margin of the environment and the right margin of the enclosing environment, the value it takes must be greater than or equal to <code>Opt</code>. Internally sets the value of <code>\rightmargin</code> for the current level.

listparindent = $\{\langle rigid\ length\rangle\}$

default: opt

Sets the *horizontal space* indentation, beyond list-indent, for second and subsequent paragraphs within a list item. Internally sets the value of \listparindent for the current level.

In the enumext* and keyans* environments this value is passed to \parindent within the minipage environment where "item content" is placed.

5.4 Keys for add code

The following $\langle keys \rangle$ should be used with "caution", they are intended to inject $\{\langle code \rangle\}$ into different parts of the defined environments. We must keep in mind that the defined environments are based on the list base environment provided by ETEX which is defined (simplified) as plain form \list{\arg one}\} {\arg two}\}. Using the before* key does not allow access to the list parameters defined by $[\langle key = val \rangle]$.

before = $\{\langle code \rangle\}$

default: not used

Execute $\{\langle code \rangle\}$ "before" the environment starts. The $\{\langle code \rangle\}$ must be passed between braces, is executed "after" all calculations related to the *list parameters* in the environment and the $\langle keys \rangle$ sets by $[\langle key = val \rangle]$ have been performed, with the exception of the $\langle keys \rangle$ start and start*, that is, in the second argument of the list: $\{\langle arg\ one \rangle\}\{\langle arg\ two \rangle\{\langle code \rangle\}\}$.

before* = $\{\langle code \rangle\}$

default: not used

Execute $\{\langle code \rangle\}$ "before" the environment starts. The $\{\langle code \rangle\}$ must be passed between braces, is executed "before" performing all calculations related to the list parameters and the $\langle keys \rangle$ sets in $[\langle key = val \rangle]$ of the environment that is, "before" the arguments defining the list environment are executed: $\{\langle code \rangle\}$ begin $\{$ list $\}$ $\{\langle arg \ one \rangle\}$ $\{\langle arg \ two \rangle\}$.

 $first = \{\langle code \rangle\}$

default: not used

Executes $\{\langle code \rangle\}$ when "starting" the environment. The $\{\langle code \rangle\}$ must be passed between braces, is executed right "after" all list parameters are done, after the second argument of list, just before the first occurrence of \item: \begin{list}{\langle} \arg one \rangle \{\langle} \cdot \text{voe} \} \\ \item.

③ Keep in mind that the $\{\langle code \rangle\}$ set in this $\langle key \rangle$ will affect the entire "body" of the environment and therefore the inner levels of the list and the keyans, keyans* and keyanspic environments. It is recommended to set this $\langle key \rangle$ per level. In the enumext* and keyans* environments this $\langle key \rangle$ is executed "after" the listparindent, parsep and itemindent $\langle keys \rangle$ within the minipage environment in which the "item content" is placed.

 $after = \{\langle code \rangle\}$

default: not used

Execute $\{\langle code \rangle\}$ "after" finishing the environment. The $\{\langle code \rangle\}$ must be passed between braces.

5.5 Keys for start, series and resume

 $start = \{ \langle integer \mid integer \ expression \rangle \}$

default: 1

 $start* = \{ \langle integer \mid string \rangle \}$

default: not used

Sets the *start value* of the numbering on the current level. Internally $\langle string \rangle$ is converted and passed as value to the counter defined by label key on the current level, i.e. it is equivalent to enter start*=5, start*=E or start*=v.

- For compatibility with tagged PDF, the start counter are set "after" the second argument to the list environment and "before" the execution of the first \item and the first key: \begin{list}{⟨arg one⟩}{⟨arg two⟩}\setcounter{enumX}\item.
- The following $\langle keys \rangle$ are "only" available for the enumext* environment and the "first level" of the enumext environment and are ignored if set when nested within each other.

 $series = \{\langle series \ name \rangle\}$

default: not used

Stores the *keys* of the *optional argument* of the "first level" of the environment in which it is executed in $\{\langle series\ name \rangle\}$ which is used as an argument in the key resume. The $\langle keys \rangle$ stored in $\{\langle series\ name \rangle\}$ are not cumulative and are overwritten if the same $\{\langle series\ name \rangle\}$ is used again.

 $resume = \{\langle series \ name \rangle\}$

default: not used

Sets the *start value* and *options* for the "first level" continuing the numbering of the environment in which the $series=\{\langle series\ name\rangle\}$ key was executed. If passed *without value* this will only set *start value* continue the numbering from the last environment in which $series=\{\langle series\ name\rangle\}$ or $resume=\{\langle series\ name\rangle\}$ is NOT present and if the save-ans key is active it will continue the numbering from the last environment in which it was executed. The *start value* can be overwritten using start or $start^*$ keys.

resume* \(\frac{\value forbidden}{}\)

default: not used

Sets the *start value* and *options* for the "first level" continuing the numbering of the environment in which the $series=\{\langle series\ name \rangle\}$ or $resume=\{\langle series\ name \rangle\}$ keys are NOT present, if the save-ans key is active

it will continue the numbering from the last environment in which it was executed. The start value can be overwritten using start or start* keys.

 $m{o}$ For security reasons the series key will never save in $\{\langle series \ name \rangle\}$ the keys series, resume, resume*, save-ans, save-key, start* and start. When using the key resume= $\{\langle series \ name \rangle\}$ it will have hierarchy in the $\langle keys \rangle$ that are saved in $\{\langle series\ name \rangle\}$, in order to establish the value of a $\langle key \rangle$ already saved in $\{\langle series\ name \rangle\}$ it must be placed to the "right" of resume= $\{\langle series \ name \rangle\}$, the same thing happens with the resume* key, the exception is the save-ans key that must be placed on the "left" if you want to start the numbering with its value. The resume key passed "without value" must be exactly "without value", i.e. resume= cannot be used and if executed before resume* it will affect the start value.

5.6 Keys for multicols

```
default: 1
columns = \{ \langle integer \rangle \}
```

Set the number of columns to be used by the multicols environment within the environments enumext and keyans. The value must be a positive integer less than or equal to 10. In the enumext* and keyans* environments they correspond to the default number of columns (without joining) and internally adjust the value of \itemwidth.

```
columns-sep = \{ \langle rigid \ length \rangle \}
```

default: by level

Set the *space between* columns used by the multicols environment within the environments enumext and keyans. Internally sets the value of \columnsep, by default its value is equal to the sum of the values set in the keys labelwidth and labelsep of the current level. In the enumext* and keyans* environments they correspond to the space between columns (without joining) and internally adjust the value of \itemwidth.

Keys for minipage 5.7

```
mini-env = \{\langle rigid \ length \rangle\}
```

Sets the width of the minipage environment on the "right side". This value added to the value set by the mini-sep key to determines the width of the minipage environment on the "left side", taking \linewidth as the maximum reference value.

```
mini-sep = \{ \langle rigid \ length \rangle \}
```

default: 0.3333em

Sets the space between the minipage environment on the "left side" and the minipage environment on the "right side". This separation is applied together with \hfill.

5.7.1 The command \miniright

```
\mbox{\sc hining} \mbox{\sc
```

The \miniright command close the minipage environment on the "left side" and opens the minipage environment on the "right side" by starting it with the \centering command. It must be placed "after" the last \item of the current environment and "before" starting the material to be placed on the "right side".

The starred argument '*' inhibits the use of \centering command i.e. the usual ETFX justification is maintained in the minipage on the "right side".

5.7.2 The key mini-right

In the horizontal list environments enumext* and keyans* it is not possible to use the \miniright command and the mini-right key must be used instead.

```
mini-right = \{\langle content \rangle\}
```

default: not used

Set the *content* for the drawing or tabular to be placed in the minipage environment on the "right side" by starting it with \centering. The $\{\langle content \rangle\}$ must be passed between braces.

```
mini-right* = \{\langle content \rangle\}
```

default: not used

Same as above, but without starting with \centering.

The storage system

The entire mechanism for "storing content" it is activated according to save-ans key on the "first level" of enumext or enumext* environments and it is ignored if they are established when they are nested inside each other. Only when this $\langle key \rangle$ is "active" the \anskey command and the environments anskey*, keyans, keyans* and keyanspic are available.

```
\begin{enumext}[save-ans={\langle store\ name\rangle}]
                                                            \begin{enumext} [save-ans={\langle store name \rangle}]
  \item Text \anskey{answer}
                                                               \item Text \anskey{answer}
  \item Text
                                                               \item Text
    \begin{keyans}
                                                                 \begin{keyanspic}
    \end{keyans}
                                                                 \end{keyanspic}
\end{enumext}
                                                            \end{enumext}
```

By executing the key save-ans={\store name\} the entire "structure" of the environment (excluding the first level) including the optional argument passed to the inner levels or the environment nested in it, along with the

```
©2024-2025 by Pablo González L
```

 $\langle content \rangle$ passed to \anskey or anskey*, the current $\langle labels \rangle$ for \item* and \anspic* in the environments keyans, keyans* and keyanspic will be "stored" in a sequence $\{\langle store\ name \rangle\}$ and at the same time will be "stored" (without the "structure" or optional argument) in a prop list $\{\langle store\ name \rangle\}$.

For security reasons the *optional argument* of the inner levels or the nested environment are *filtered* by excluding all $\langle keys \rangle$ related to the "storage system" (§??) along with the keys mini-env, mini-sep, mini-right, mini-right*, series, resume and resume* when storing in sequence { $\langle store name \rangle$ } set by save-ans key.

6.1 Keys for storage system

The only $\langle keys \rangle$ available for all levels of the enumext environment and the enumext* environment are nostore and save-key, the rest of the $\langle keys \rangle$ described in this section must be passed directly in the *optional argument* of the "first level" of the environment in which the key save-ans is executed. The key save-ans should NOT be passed with the command \setenumext.

```
save-ans = \{ \langle store \ name \rangle \}
```

default: not set

Sets the *name* of the *sequence* and *prop list* in which the $\{\langle contents \rangle\}$ will be "*stored*" by \anskey and anskey* in enumext and enumext* environments and the current $\langle labels \rangle$ for \item* and \anspic* in the environments keyans, keyans* and keyanspic. If the *sequence* or *prop list* $\{\langle store\ name \rangle\}$ does not exist, it will be created globally and will not be *overwritten* if the key is used again.

```
save-key = \{\langle key \ list \rangle\}
```

default: not set

This key *overrides* the default "*stored keys*" of the *optional argument* of the inner levels or nested environment that will be passed to the *sequence*. The $\langle key \ list \rangle$ passed to this key ignores any $\langle keys \rangle$ in the "*stored structure*" and must be passed between braces. For example, if we execute at a second level:

```
\begin{enumext}[save-ans={\store name\}]
\item Text \anskey{answer}
\item Text
\begin{enumext}[nosep, columns=2, save-key={columns=3}]
...
\end{enumext}
\end{enumext}
```

The "stored keys" by default in the sequence $\{\langle store\ name \rangle\}$ would be nosep, columns=2, but using the key save-key= $\{columns=3\}$ will overwrite and the "stored key" in the sequence $\{\langle store\ name \rangle\}$ are only columns=3 ignoring all the others.

```
save-sep = \{ \langle text \ symbol \rangle \}
```

default: {, }

Sets the *text symbol* that will separate the current $\langle label \rangle$ to the *optional argument* passed to the \item* and \anspic* in the environments keyans, keyans* and keyanspic and storing them in the *sequence* and *prop list* $\{\langle store\ name \rangle\}$ set by save-ans key. The $\{\langle text\ symbol \rangle\}$ must always be passed between braces, whitespace ' \sqcup ' is preserved within the braces and only affects the "stored content" and not what is displayed when using the show-ans or show-pos keys.

```
no-store (value forbidden)
```

default: not used

This is a "switch-key" that does not receive an argument and disables the "storing content" in the sequence and prop list {\store name\rangle} set by save-ans key at the entire level or a nested environment in which it runs. This key is intended for use in internal levels or nested enumext or enumext* environments in which you want to use enumext or enumext* but "without" using the \anskey command or use anskey* environment and "without" interfering with the check-ans key.

6.1.1 Keys for label and ref

```
save-ref = \{ \langle true \mid false \rangle \}
```

default: false

Activates the "internal label and ref" mechanism for referencing "stored content" in prop list $\{\langle store\ name\rangle\}$ set by save-ans key. To reference the location of the "stored content" within the environment you must use $\texttt{ref}\{\langle store\ name:position\rangle\}$, where $\langle position\rangle$ corresponds to the position occupied by the "stored content" in the prop list $\{\langle store\ name\rangle\}$ returned by the show-pos key. For example $\texttt{ref}\{\texttt{test:4}\}$ will return 3. (b) which corresponds to the location of the "stored content" at position 4 in prop list test within the environment in which the key save-ans=test was set.

```
mark-ref = \{\langle symbol \rangle\}
```

default: \textreferencemark

Sets the *symbol* that will be displayed by the \printkeyans command only if the hyperref package is detected and the save-ref key are active. This "*symbol*" is used as a "*link*" between the environment in which the save-ans key was used and the place where the command is executed.

6.1.2 Keys for wrap and marks

The enumext package provides a set of $\langle keys \rangle$ to set and manipulate "symbol marks" associated with "answers" and how they are displayed and stored in the sequence and prop list.

The $\langle keys \rangle$ available for the \anskey command and the anskey* environment can be passed "only" in the optional argument in the "first level" of the enumext or enumext* environment.

The $\langle keys \rangle$ available for the keyans and keyans* environments can be passed locally in the *optional argument*, at the "first level" of the enumext or enumext* environment or via the \setenumext command with one

```
©2024-2025 by Pablo González L
```

minor difference, when $\langle keys \rangle$ are passed through the "first level" of the enumext or enumext* environment they are set in "both" environments, but when they are passed using the \setenumext command they are set "individually" in each environment.

 $show-ans = \{ \langle true \mid false \rangle \}$

default: false

Display the *symbol* set by the mark-ans key to the left of the *mandatory argument* $\langle content \rangle$ passed to the $\langle anskey \rangle$ command and $\langle body \rangle$ for the anskey* environment using the wrap-ans key if set.

For \item* and \anspic* the keyans, keyans* and keyanspic environments it will display the symbol set by the mark-ans* key to the left of the current $\langle label \rangle$ and optional argument. If the optional argument is present in \item* or \anspic* it will be shown using wrap-opt key.

Keys for \anskey and anskey*

 $mark-ans = \{\langle symbol \rangle\}$

default: \textasteriskcentered

Sets the *symbol* to be displayed in the left margin for \anskey command and anskey* environment when using the key show-ans. The "*symbol*" is placed in a box of width equal to the value of labelwidth at the current level, separated by the value of the key mark-sep and aligned by the value of the key mark-pos. This key is not affected by the keys font or wrap-label so if you want to apply *styling* you have to do it directly, for example: mark-ans={\textcolor{red}{\textbf{\textbf{\textbf}\textbf{\textbf}}}

 $mark-pos = \{ \langle left \mid right \mid center \rangle \}$

default: left

Sets the *aligned* of the "symbol" defined by mark-ans key for \anskey command and anskey* environment. The "symbol" is aligned in a box with the same dimensions of the label box defined by labelwidth key on the current level and separated by the value of the mark-sep key.

 $mark-sep = \{\langle rigid \ length \rangle\}$

default: labelsep

Sets the *horizontal space* between the box containing the "symbol" defined by mark-ans key and the *mandatory* argument $\langle content \rangle$ passed to the $\langle anskey \rangle$ command and the body in anskey* environment.

wrap-ans = $\{\langle code \{ \#1 \} \ more \ code \rangle \}$

default: \fbox+\parbox{#1}

Wraps the *mandatory argument* $\langle content \rangle$ passed to the \anskey and the $\langle body \rangle$ in anskey* environment referenced by $\{\#1\}$ when using the show-ans or show-pos keys. The $\{\langle code \rangle\}$ must be passed between braces and only affects how the *argument* or *body* is displayed and NOT the "stored content" in the sequence and *prop list* $\{\langle store\ name \rangle\}$ set by save-ans key. If this key is passed using \setenumext it is necessary to use double ' $\{\#1\}$ '.

Keys for keyans, keyans* and keyanspic

 $mark-ans* = \{\langle symbol \rangle\}$

 $default: \ \ \ \textit{textasterisk} centered$

Sets the *symbol* to be displayed in the left margin for \item* and \anspic* for the keyans, keyans* and keyanspic environments when using the key show-ans. The "*symbol*" is placed in a box of width equal to the value of labelwidth of the environment in which it is executed, separated by the value of the key mark-sep* and aligned by the value of the key mark-pos*. This key is not affected by the keys font or wrap-label so if you want to apply *styling* you have to do it directly, for example: mark-ans*={\textcolor{red}{\textbf{\textasteriskcentered}}}.

 $mark-pos* = \{ \langle left \mid right \mid center \rangle \}$

default: left

Sets the *aligned* of the "symbol" defined by mark-ans* key for the keyans, keyans* and keyanspic environments. The "symbol" is aligned in a box with the same dimensions of the label box defined by labelwidth key of the environment in which it is executed and separated by the value of the mark-sep* key.

 $mark-sep* = \{\langle rigid\ length \rangle\}$

default: labelsep

Sets the *horizontal space* between the box containing the "*symbol*" defined by mark-ans* key and the current $\langle label \rangle$ for \t item* and \t anspic* in the keyans, keyans* and keyanspic environments.

 $wrap-ans* = \{\langle code \{ #1 \} \ more \ code \rangle \}$

default: not used

Wraps the *current* $\langle label \rangle$ when using the show-ans key for \item* and \anspic* referenced by {#1} in the keyans, keyans* and keyanspic environments after executing the align and font keys. The { $\langle code \rangle$ } must be passed between braces and *only* affects how the $\langle label \rangle$ is displayed and NOT the "stored label" in the sequence and prop list { $\langle store\ name \rangle$ } set by save-ans key. This key overwrites the key wrap-label and if is passed using \setenumext it is necessary to use double '{##1}'. For example, if you want the $\langle label \rangle$ to be displayed in red when using show-ans you just set wrap-ans*={\textcolor{red}{#1}}.

 $wrap-opt = \{ \langle code \{ #1 \} \ more \ code \rangle \}$

default: [{#1}]

Wraps the *optional argument* passed to the \item* and \anspic* referenced by $\{\#1\}$ in the keyans, keyans* and keyanspic environments when using the show-ans or show-pos keys. The $\{\langle code \rangle\}$ must be passed between braces and only affects the current *optional argument* and NOT the "stored content" in the sequence and *prop list* $\{\langle store\ name \rangle\}$ set by save-ans key. If this key is passed using \setenumext it is necessary to use double ' $\{\#1\}$ '.

6.1.3 Keys for debug and checking

```
show-pos = \{\langle true \mid false \rangle\}
                                                                                                                                                                                 default: false
```

Displays the *position* occupied by the "stored content" by \anskey, anskey*, \item* and \anspic* in the prop list {\store name\} set by save-ans key. This position is used by the \getkeyans command and by the \ref command if the save-ref key is active.

```
check-ans = \{ \langle \mathit{true} \mid \mathit{false} \rangle \}
                                                                                                                                                                                                                                        default: false
```

Enables the checking answer mechanism displaying an appropriate message on the terminal. This key works under the logic that each \item or \item* that does not open an inner level or nested environment contains "only one answer" or "only one execution" of the \anskey or anskey*. It is intended to be used in conjunction with the no-store key.

The command \anskey

```
\anskey \anskey[\langle keys \rangle]{\langle content \rangle}
```

The command \anskey takes a mandatory non empty argument $\{\langle content \rangle\}$ and "stores" it in the sequence and *prop list* {\store name\struct\} set by save-ans key. By design the command cannot be nested or passed *verbatim* material in the argument and it is assumed that each numbered \item or \item* within the environment in which it is active it has a "single execution" of \anskey unless \item or \item* open a nested level or use the no-store key.

If save-ref key are active and the hyperlink and hyperlink and hyperlink and <a href="https://hyperlink.gov/hyperlin be used, otherwise the usual "label and ref" system provided by LTFX will be used.

The \anskey command is available for all levels of the enumext environment and the enumext* environment, but is disabled for the keyans, keyans* and keyanspic environments.

6.2.1 Keys for \anskey

By default the *mandatory argument* (content) passed to \anskey when "storing" in the sequence {\store name\} has the form $\langle item \langle content \rangle$, the following $\langle keys \rangle$ allow modifying the way in which it is "stored" in the sequence.

```
break-col \( \value forbidden \)
                                                                                                                         default: not used
```

Stores $\{\langle content \rangle\}\$ in the sequence $\{\langle store\ name \rangle\}\$ of the form $\langle columnbreak \rangle$ item $\langle content \rangle$.

```
item-join = \{\langle columns \rangle\}
```

Set the *number of columns* to be used for $\forall item(\langle columns \rangle)$ and stores $\{\langle content \rangle\}$ in the *sequence* $\{\langle store \rangle\}$ name) of the form \item($\langle columns \rangle$) $\langle content \rangle$.

```
item-star \langle value forbidden \rangle
                                                                                                                                                default: not used
```

Stores $\{\langle content \rangle\}\$ in the sequence $\{\langle store\ name \rangle\}\$ of the form $\backslash item^* \langle content \rangle$.

```
item-sym* = \{\langle symbol \rangle\}
                                                                                                                                                              default: not set
```

Sets the symbol for $\forall tem^*$ when using the key $\exists tem^*$ and stores $\{\langle content \rangle\}$ in the sequence $\{\langle store, tem^* \rangle\}$ $|name\rangle$ of the form $\lceil (symbol) \rceil \ \langle content \rangle$. The symbol can be in text or math mode, for example item-sym*= $\{\$\ast\$\}\ stores \item*[\$\ast\$] \ \langle content \rangle$.

```
item-pos* = {\langle rigid \ length \rangle}
```

default: not set

Sets the *offset* for \idet when using the keys item-star and item-sym* and stores $\{\langle content \rangle\}$ in the *sequence* $\{\langle store\ name \rangle\}$ of the form $\idesign [\langle symbol \rangle] [\langle offset \rangle] \langle content \rangle$.

```
\begin{enumext}[save-ans=test,show-ans=true]
  \item* Text containing our instructions or questions. \anskey\{\langle first\ answer \rangle\}
  \item Text containing our instructions or questions.
    \begin{enumext}
       \item Question.\anskey\{\langle second\ answer \rangle\}
    \end{enumext}
  \item Text containing our instructions or questions. \ankey{\langle third\ answer \rangle}
  \item Text containing our instructions or questions. \langle fourth\ answer \rangle
\end{enumext}
```

- ★ 1. Text containing our instructions or questions.
 - * first answer
 - 2. Text containing our instructions or questions.
 - (a) Question.
 - second answer

- 3. Text containing our instructions or questions.
- * third answer
- 4. Text containing our instructions or questions.
- * fourth answer

6.3 The environment anskey*

```
anskey^* \setminus begin\{anskey^*\}[\langle key = val \rangle] \langle body content \rangle \setminus end\{anskey^*\}
```

The environment anskey* takes a mandatory $\{\langle body\ content \rangle\}$ and "stores it" in the sequence and prop list $\{\langle store\ name \rangle\}$ set by save-ans key. If save-ref key are active and the hyperref[?] package is detected hyperlink and hypertarget will be used, otherwise the usual "label and ref" system provided by LTEX will be used.

By design the environment cannot be nested but full supports "verbatim material" in the $\langle body \rangle$ and it is assumed that "each numbered" \item or \item* within the environment in which it is active it has a "single execution" unless \item or \item* open a nested level or use the no-store key.

The anskey* environment is implemented using the new "collect code" c-type argument part of ETEX release 2025-06-01[?]. \begin{anskey*} and \end{anskey*} must be in different lines and should not appear within verbatim environments or commands. All $\langle keys \rangle$ must be passed separated by commas and "without separation" of the start of the environment.

Comments "%" or "any character" after \begin{anskey*} or $[\langle key = val \rangle]$ on the same line are NOT supported, Let Will return an "error" message if this happens. In a similar way comments "%" or "any character" after \end{anskey*} on the same line Let X will return a "warning" message.

6.3.1 Keys for anskey*

The anskey* environment uses the same $\langle keys \rangle$ as the \anskey command next to the $\langle keys \rangle$ write-env, overwrite and force-eol. The environment is available for all levels of the enumext environment and the enumext* environment, but it is disabled for the keyans, keyans* and keyanspic environments.

```
\mathsf{write}\mathsf{-env}=\{\langle \mathit{file.ext}\rangle\}
```

Sets the name of the $\langle external\ file \rangle$ in which the $\langle contents \rangle$ of the environment will be written. The $\langle file.ext \rangle$ will be created in the working directory, relative or absolute paths are not supported. If $\langle file.ext \rangle$ does not exist, it will be created or overwritten if the overwrite key is used.

```
overwrite = \{\langle true \mid false \rangle\} default: false

Sets whether the \langle file.ext \rangle generated by write-env from the anskey* environment will be rewritten.

force-eol = \{\langle true \mid false \rangle\} default: false
```

Sets if the *end of line* for the *\stored content\strain* is hidden or not. This key is necessary only if the last line is the closing of some environment defined by the <code>fancyvrb</code> package as \end{Verbatim} or another environment that does not support a comments "%" after closing \end{Verbatim}%.

```
\begin{enumext}[save-ans=test,show-pos=true,start=5]
  \item* Text containing our instructions or questions.
    \begin{anskey*}[item-star]
      (first answer)
    \end{anskey*}
  \item Text containing our instructions or questions.
    \begin{enumext}
      \item Question.
        \begin{anskey*}
          (second answer)
        \end{anskey*}
    \end{enumext}
  \item Text containing our instructions or questions.
    \begin{anskey*}
      (third answer)
    \end{anskey*}
  \item Text containing our instructions or questions.
    \begin{anskey*}
      (fourth answer)
    \end{anskey*}
\end{enumext}
```

← 5. Text containing our instructions or questions.	7. Text containing our instructions or questions.
[5] First answer with verbatim	[7] third answer
6. Text containing our instructions or questions.	8. Text containing our instructions or questions.
(a) Question.	[8] fourth answer
[6] second answer	

6.4 The environments keyans and keyans*

```
\label{eq:keyans} $$ \left( \ker = val \right) \right] \to \left( \operatorname{custom} \right) \cdot \left( \operatorname{custom} \right) \right. \  \\  \left( \operatorname{custom} \right) \to \left( \operatorname{custom} \right) \cdot \left( \operatorname{custom} \right) \cdot \left( \operatorname{custom} \right) \right. \  \\  \left( \operatorname{custom} \right) \to \left( \operatorname{custom} \right) \cdot \left( \operatorname{custo
```

The keyans and keyans* environments are "enumerated list" environments designed for "multiple choice" questions activated by the save-ans key. This environments can NOT be nested and must always be at the "first level" of the enumext environment, the command $\identified{\text{item}[\langle custom\rangle]}$ work in the usual and the command $\identified{\text{item}(\langle columns\rangle)}$ is available for the keyans* environment.

The behavior of \item* in keyans and keyans* environments is NOT the same as in the enumext or enumext* environments.

```
\begin{enumext}[save-ans=test]
                                                                                            \begin{enumext}[save-ans=test]
                                                                                                \forall item \langle item content \rangle
   \item \(\(\text{item content}\)
       \begin{keyans} [\langle key = val \rangle]
                                                                                                   \lceil \langle key = val \rangle \rceil
          \item \(\(\)item \(\)content\\)
                                                                                                       \item \(\(\)item \(\)content\\)
          \item [\langle custom \rangle] \langle item content \rangle
                                                                                                       \item [\langle custom \rangle] \langle item content \rangle
          \verb|\item*| \langle item \ content \rangle|
                                                                                                       \item* \(\(\)item \(\)content\)
          \verb|\item*| [\langle content \rangle] | \langle item \ content \rangle
                                                                                                       \forall item^*[\langle content \rangle] \langle item content \rangle
       \end{keyans}
                                                                                                   \end{keyans*}
\end{enumext}
                                                                                            \end{enumext}
```

The $\langle keys \rangle$ set in the *optional argument* of the environment are the same (almost) as those of the enumext and enumext* environments and have *higher precedence* than those set by \setenumext[$\langle keyans \rangle$] { $\langle key = val \rangle$ } or \setenumext[$\langle keyans^* \rangle$] { $\langle key = val \rangle$ }. If the *optional argument* is not passed or the $\langle keys \rangle$ are not set by \setenumext, the default values will be the same as the "second level" of the enumext environment with the difference in the $\langle label \rangle$ which will be set to label=\Alph*).

The keys mark-ans*, mark-pos*, mark-sep*, save-sep, wrap-opt, wrap-ans*, show-ans and show-pos are available for both environments.

6.4.1 The \item* in keyans and keyans*

```
\frac{\texttt{\  \  \, | item^* \  \, | item^* }}{} \  \  \, | item^* [\langle content \rangle]}
```

The \item* and \item* [$\langle content \rangle$] command "store" the current $\langle label \rangle$ set by label key next to the optional argument $\langle content \rangle$ in sequence and prop list { $\langle store\ name \rangle$ } set by save-ans key in the "first level" of the enumext or enumext* environments.

The *starred argument* '*' cannot be separated by spaces ' \square ' from the command, i.e. \item* and the *optional argument* does "NOT" support *verbatim content*. By design it is assumed that the \item* will only appear "*once*" within the environment.

```

Some text

6.5 The environment keyanspic

 $\label{eq:keyanspic} $$ \left(e^{-val} \right) = \frac{(\langle content \rangle)}{(\langle content \rangle)} \left(e^{-val} \right) = \frac{(\langle content \rangle)}{(\langle content \rangle)} $$ \left(e^{-val} \right) = \frac{(\langle content \rangle)}{(\langle content \rangle)} $$$

The keyanspic environment is an "enumerated list" environment activated by the save-ans key that has the same configuration for "spacing" and $\langle label \rangle$ as the keyans environment that uses the \anspic command instead of \item. It is intended for placing drawings or tabular with $\langle label \rangle$ centered above or below in a single line or upper and lower layout style.

When the keyanspic environment is used without keys the $\langle labels \rangle$ are centered below the drawings or tabular in a single line layout style.

A representation of the output can be seen in the figure ??.

Figure 6: Representation of the keyanspic environment with layout-sty= $\{\langle 3,2\rangle\}$ in enumext.

This environment cannot be nested and must *always* be at the "first level" of the enumext environment, the $\ilde{\text{tem}}$ command is disabled and $\langle keys \rangle$ cannot be set using \setenumext .

6.5.1 Keys for keyanspic

 $label-pos = \{\langle above \mid below \rangle\}$

default: below

Set the *position* of $\langle label \rangle$ to be centered "above" or "below" *drawings* or *tabular* when the \anspic command is executed.

 $label-sep = \{ \langle rubber \ length \mid rigid \ length \rangle \}$

default: internal adjustment

Set the *vertical spacing* between the $\langle label \rangle$ centered "above" or "below" and *drawings* or *tabular* when running the \anspic command.

 $layout-sty = \{ \langle n^{\circ} upper, n^{\circ} lower \rangle \}$

default: not set

Set the *number* of *drawings* or *tabular* that will be distributed "upper" and "lower" within the environment when executing the \anspic command. The value must be passed in braces and if not set or the $\langle n^{\circ} \ lower \rangle$ is omitted the *drawings* or *tabular* will be put on a *single line*.

 $layout-sep = \{\langle rubber\ length \mid rigid\ length \rangle\}$

default: adjusted parsep from keyans

Set the *vertical separation* between the number of *drawings* or *tabular* placed at the "upper" and "lower" within the environment when executing the \anspic command. Internally adjusts the parsep value taken from the keyans environment.

 $layout-top = \{\langle rubber\ length \mid rigid\ length \rangle\}$

default: adjusted topsep from keyans

Set the *vertical space* added to both the top and bottom of the environment. Internally adjust the value of topsep taken from keyans environment.

The keys mark-ans*, mark-pos*, mark-sep*, save-sep, wrap-opt, wrap-ans*, show-ans and show-pos are available for this environment.

$\textbf{6.5.2} \quad \textbf{The command} \ \backslash \\ \textbf{anspic}$

 $\frac{\langle anspic \{\langle drawing\ or\ tabular \rangle\}}{\langle anspic^*[\langle content \rangle] \{\langle drawing\ or\ tabular \rangle\}}$

The \anspic command take three arguments, the *starred argument* '*' store the current $\langle label \rangle$ next to the *optional argument* $\langle content \rangle$ in *sequence* and *prop list* $\{\langle store\ name \rangle\}$ set by save-ans key.

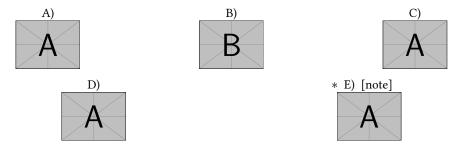

The *starred argument* '*' cannot be separated by spaces ' \square ' from the command, i.e. \anspic* and the *optional argument* does "NOT" support *verbatim content*. By design it is assumed that the *starred argument* '*' will only appear "once" within the environment.

```
\begin{enumext}[save-ans=test,show-ans=true,nosep]
  \item Question with images and labels below.
    \begin{keyanspic}[layout-sty={3,2}]

    \verb|\end{keyanspic}|
\end{enumext}
```

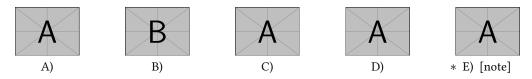

1. Question with images and labels below.

2. Question with images and labels above.

3. Question with images and labels below on a single line.

◆ Remember to pass the alt={⟨description⟩} key to the \includegraphics command when creating a tagged PDF.

6.6 Printing stored content

6.6.1 The command \getkeyans

\getkeyans \getkeyans{\store name: position\}

The command \getkeyans prints the "stored content" in prop list $\{\langle store\ name \rangle\}$ defined by save-ans key in the $\langle position \rangle$ returned by the show-pos key.

The "stored content" can only be accessed *after* it is stored, if $\{\langle store\ name \rangle\}$ does not exist the command will return an error.

The form taken by the argument $\{\langle store\ name: position \rangle\}$ is the same as that used to generate the "internal label and ref" system when save-ref key are active, so to refer to a "stored content". For example $\{esteyans\{test:4\}\}$ will return the "stored content" at position 4 of the environment in which the key save-ans=test was set.

6.6.2 The command \foreachkeyans

 $\foreachkeyans \foreachkeyans[\langle key = val \rangle] \{\langle store\ name \rangle\}$

The command \foreachkeyans goes through and executes the command \getkeyans on the contents in *prop* list $\{\langle store\ name \rangle\}$. If you pass without options run \getkeyans on all contents in *prop* list $\{\langle store\ name \rangle\}$.

Options for command

 $\mathsf{sep} = \{\langle code \rangle\}$ default: $\{;\}$

Establishes the *separation* between "each" $\{\langle content \rangle\}$ stored in *prop list* $\{\langle store\ name \rangle\}$. For example, you can use $sep=\{\setminus [10pt]\}$ for vertical separation of stored contents.

 $\mathsf{step} = \{\langle \mathit{integer} \rangle\}$ default: 1

Sets the *step* (increment) applied to the value set by key start for "each" $\{\langle content \rangle\}$ stored in *prop list* $\{\langle store \ name \rangle\}$. The value must be a $\langle positive \ integer \rangle$.

 $\mathsf{start} = \{\langle \mathit{integer} \rangle\}$ default: 1

Sets the *position* of the *prop list* $\{\langle store\ name \rangle\}$ from which execution will start. The value must be a $\langle positive\ integer \rangle$.

 $\mathsf{stop} = \{\langle \mathit{integer} \rangle\}$ default: 0

Sets the *position* of the *prop list* $\{\langle store\ name \rangle\}$ from which execution will finish. The value must be a $\langle positive\ integer \rangle$.

```
before = \{\langle code \rangle\}
                                                                                                                                                             default: empty
            Sets the \{\langle code \rangle\} that will be executed \langle before \rangle each \{\langle content \rangle\} stored in prop list \{\langle store\ name \rangle\}. The
            \{\langle code \rangle\} must be passed between braces.
 after = \{\langle code \rangle\}
                                                                                                                                                             default: empty
```

Sets the $\{\langle code \rangle\}$ that will be executed $\langle after \rangle$ each $\{\langle content \rangle\}$ stored in *prop list* $\{\langle store\ name \rangle\}$. The $\{\langle code \rangle\}$ must be passed between braces.

```
wrapper = \{ \langle code \{ #1 \} \ more \ code \rangle \}
                                                                                                                                                                  default: empty
```

Wraps the $\{\langle content \rangle\}$ stored in *prop list* $\{\langle store\ name \rangle\}$ referenced by $\{\#1\}$. The $\{\langle code \rangle\}$ must be passed between braces. For example $\foreachkeyans[wrapper={\mbox{$\mbox{[1em][1]}$}}]{\mbox{$\mbox{$\mbox{store }name$}$}}$.

6.6.3 The command \printkeyans

```
\printkeyans \printkeyans{\langle store name \rangle}
                        \printkeyans[\langle keys \rangle] \{\langle store\ name \rangle\}
                        \printkeyans*[\langle keys \rangle] \{\langle store\ name \rangle\}
```

The command \printkeyans prints "all stored content" in sequence {\store name\ranger} defined by save-ans key placing this inside the enumext or enumext* environment if the starred argument '*' is used.

The "stored content" can only be accessed after it is stored in the sequence, if { (store name) } does not exist the command will return an error.

The optional argument allows managing the \(\lambda \text{keys} \) in the "first level" of the environment in which the "stored content" of the sequence { \(\store name \) \) will be printed, if the starred argument '*' is used it will be enumext* otherwise enumext.

The default values for the "first level" are the same as the default values for the enumext and enumext* environments along with the keys nosep, first=\small, font=\small and columns=2. For the inner levels of the environment enumext saved in the sequence { \(\store \ name \) \} the default values are the same as those established for the second, third and fourth levels plus the keys nosep, first=\small, font=\small. If the environment enumext* is saved within the sequence $\{\langle store\ name \rangle\}$ it will have the same default values plus the keys nosep, first=\small, font=\small.

Since the command encapsulates by default the enumext environment or the enumext* environment, we must take some considerations:

- If we execute \printkeyans*{\store name\sequence {\store name\sequence } already contains any enumext* environment an error will be returned as we cannot nest.
- If we execute \printkeyans*{\(\store name \) \} and the sequence \(\square \store name \) \) contains any enumext environments, they will start with the $\langle keys \rangle$ set for the first level unless they are set in the optional argument or save-key is used to modify it.
- If we execute \printkeyans{\(\store\) name\(\)} and the sequence {\(\store\) name\(\)} contains any environment enumext*, they will start with the $\langle keys \rangle$ set by default unless they are set in the *optional argument* or save-key is used to modify it.

The default values for the "first level" of \printkeyans commands and \printkeyans* are established using \setenumext[$\langle print, 1 \rangle$] { $\langle keys \rangle$ } and \setenumext[$\langle print^* \rangle$] { $\langle keys \rangle$ }.

If we need to set the $\langle keys \rangle$ for the environment enumext "saved" in the sequence $\{\langle store\ name \rangle\}$ we will use \setenumext[$\langle print, level \rangle$] { $\langle keys \rangle$ } and if we need to set the $\langle keys \rangle$ for the environment enumext* "saved" in the sequence $\{\langle store\ name \rangle\}\$ we will use $\$ setenumext $[\langle print\ , * \rangle]$ $\{\langle keys \rangle\}$.

3. (a) Yes
  (b) i.
           very good
          obsolete
      ii.
```

Full examples

Here I will leave as an example some adaptations questions taken from TeX-SX. The examples are attached to this documentation and can be extracted from your PDF viewer or from the command line by running:

```
$ pdfdetach -saveall enumext.pdf
```

and then you can use the excellent arara1 tool to compile them.

Example 1

Adapted from the response given by Enrico Gregorio in Squares for answer choice options and perfect alignment to mathematical answers 🖹.

- 1. La velocità di $1,00 \times 10^2$ m/s espressa in km/h è:
- A 36 km/h.

A 36 km/h. B 360 km/h.

B 360 km/h.

C 27,8 km/h.

C 27,8 km/h.

D $3,60 \times 10^{8}$ km/h.

- D $3,60 \times 10^{8}$ km/h.
- $1 \times 10^{-10}\,\mathrm{m}$) e il fermi o femtometro (1 fm = $1 \times$ $10^{-15}\,\mathrm{m}$). Qual è la relazione tra queste due unità di misura?
- 2. In fisica nucleare si usa l'angstrom (simbolo: 1 Å = 4. In fisica nucleare si usa l'angstrom (simbolo: 1 Å = 4) 1×10^{-10} m) e il fermi o femtometro (1 fm = $1 \times$ 10^{-15} m). Qual è la relazione tra queste due unità di misura?

3. La velocità di $1{,}00 \times 10^2$ m/s espressa in km/h è:

- A | 1 Å = 1×10^5 fm.
- A | 1 Å = 1×10^5 fm.
- B $1 \text{ Å} = 1 \times 10^{-5} \text{ fm}.$

B $1 \text{ Å} = 1 \times 10^{-5} \text{ fm}.$

 \overline{C} 1 Å = 1 × 10⁻¹⁵ fm.

C 1 Å = 1 × 10⁻¹⁵ fm.

D $1 \text{ Å} = 1 \times 10^3 \text{ fm}.$

D $1 \text{ Å} = 1 \times 10^3 \text{ fm}.$

- 1. B
- 2. A
- 3. B

- Test keys
- 1. B, x = 5

2. D

3. C, some note

- * 4. E, A duck
- * 5. D, other note

Example 4

A "simple worksheet" using ducks :)

Factor $x^2 - 2x + 1$

Factor 3x + 3y + 3z

The following questions need to be cuaqtified:)

True False

- (a) $\alpha > \delta$
- (b) LATEX2e is cool?

(a) You use linux?

×

- (b) Usually uses the package manager?
- (c) Rate the following package and class
 - i. xsim-exam
 - ii. xsim
 - iii. exsheets

The answer to $\ref{eq:condition}$ is $(x-1)^2$ and the answer to $\ref{eq:condition}$ is False.

 1. $(x-1)^2$ * (b) Yes, dnf

 2. 3(x+y+z) * (c) i. doesn't exist for now :(

 3. (a) False
 * ii. very good

 (b) Very True!
 * iii. obsolete

 4. (a) Yes
 *

Example 5

Adapted from the response given by Stephen in SAT like question format 🖹.

1

Which choice best describes what happens in the passage?

- A) One character argues with another character who intrudes on her home.
- B) One character receives a surprising request from another character.
- C) One character reminisces about choices she has made over the years.
- D) One character criticizes another character for pursuing an unexpected course of action.

3

Which choice best describes what happens in the passage?

- A) One character argues with another character who intrudes on her home.
- B) One character receives a surprising request from another character.
- C) One character reminisces about choices she has made over the years.
- D) One character criticizes another character for pursuing an unexpected course of action.

2

Which choice best describes what happens in the passage?

- A) One character argues with another character who intrudes on her home.
- B) One character receives a surprising request from another character.
- C) One character reminisces about choices she has made over the years.
- D) One character criticizes another character for pursuing an unexpected course of action.

4

Which choice best describes what happens in the passage?

- A) One character argues with another character who intrudes on her home.
- B) One character receives a surprising request from another character.

```

8 Tagged PDF examples

This section is just to show the compatibility of enumext with *tagged* PDF using lualatex. The attached files here are just for testing and are intended as examples and, in a way, to simplify the time of Matthew Bertucci (@mbertucci) when he sees this excellent package and adds it to The LaTeX Tagged PDF repository.

To compile the tests with lualatex-dev the packages multicol, unicode-math, geometry, graphicx, luamml and hyperref are required along with the line:

```
\DocumentMetadata
{
  lang = en-US, pdfversion = 2.0, pdfstandard = ua-2, tagging=on,
}
```

- ◆ All examples have been checked using veraPDF together with ngpdf.
 - The file <code>enumext-01.tex</code> contains the basic tests for the <code>enumext</code> and <code>enumext*</code> environments and the nesting between them plus the use of the <code>label</code>, <code>labelwidth</code>, <code>labelsep</code>, <code>ref</code>, <code>align</code> and <code>wrap-label</code> keys. .
 - The file enumext-02.tex contains the tests for the enumext and enumext* environments and the support for minipage and multicols environments using the keys columns, columns-sep, minienv, mini-right and \miniright command.
 - The file <code>enumext-03.tex</code> contains the tests for the <code>enumext</code> and <code>keyanspic</code> environments activated by the <code>save-ans</code> key together with the <code>save-sep</code> and <code>save-ref</code> keys and the <code>\printkeyans</code> command. .
 - The file <code>enumext-04.tex</code> contains the tests for the <code>\anskey</code> command and the <code>anskey*</code> environment activated by the <code>save-ans</code> key along with the <code>\getkeyans</code> and <code>\printkeyans</code> commands. .
 - The file enumext-05.tex contains the tests for the environments keyans, keyans* and keyanspic activated by the key save-ans together with the keys no-store and show-ans and the commands \setenumext, \setenumextmeta, \printkeyans and \foreachkeyans.
 - The file enumext-06.tex contains the tests for the environments enumext and enumext* for fake itemize and description. .

9 The way of non-enumerated lists

It is possible to use (or abuse) the enumext and enumext* environments to mimic *non-enumerated* list environments such as itemize and description, clearly the $\langle keys \rangle$ to "store answers", the keyans, keyans* and keyanspic environments lose their sense and it is not the focus of enumext package, but, why not to do it?.

Here I leave as an example other uses of the enumext environment that can be helpful for specific purposes. The *trick* to generate these "fake environments" is set label= $\{\$ or label= $\{\$ on play with the list-indent, list-offset, font and wrap-label keys.

Fake itemize environment

Here we set the label key using the default settings in ETeX for the four levels \textbullet, \textendash, \textasteriskcentered and \textperiodcentered together with the nosep key to reduce the vertical spaces in the left side example and set the label key in mathematical mode for the right side as \ast, \diamond, \circ and \star for the four levels together with the nosep key

- First level item
 - Second level item
 - * Third level item
 - · Fourth level item
- · First level item

- * First level item
 - ♦ Second level item
 - o Third level item
 - ⋆ Fourth level item
- * First level item

Fake description environment

Here we set label={} and list-indent=2.5em, font=\bfseries.

SomeThing A short one-line description.

This is an entry without a label.

Something A short *one-line* description text.

Something long A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

If we add list-indent=Opt you get widest style:

SomeThing A short one-line description.

This is an entry without a label.

Something A short *one-line* description text.

Something long A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

- The small space at the beginning of the "unlabeled entry" corresponds to \labelsep and can be removed using \hspace{-\labelsep} at the beginning of the line.
- ◆ When tagged PDF is active the default description style is NOT available due to the redefinition of \makelabel for the align key which uses \makebox in this case, meaning that \item[⟨content⟩] will not extend beyond \labelwidth which causes overlaps,

Description indented by label

Here we set label={} and we will give a convenient value to labelsep and labelwidth, for example we can take as reference our *longest label* and pass it as value using:

```
\newlength{\descitemwd}
\settowidth{\descitemwd}{\textbf{Something long}}}
```

and then use labelsep=4pt, labelwidth=\descitemwd, font=\bfseries.

SomeThing A short one-line description.

This is an entry without a label.

Something A short one-line description.

Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut

purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

The environment can be translated so that the $\langle labels \rangle$ are on the left margin calculating the value passed to the list-offset key, in this case it will be equal to the sum of the values set by the labelwidth and labelsep keys finally resulting as list-offset={-\descitemwd - 4pt}.

SomeThing

A short one-line description.

This is an entry without a label.

Something

A short one-line description.

Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

If we add align=right it will look like this:

SomeThing A short one-line description.

This is an entry without a label.

Something A short one-line description.

Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

At this point we have used list-offset={-\descitemwd - 4pt} instead of list-offset={-\labelwidth - \labelsep}, this is because the parameters \labelwidth and \labelsep take the default values, as if we had not set label.

Description with multi-line labels

The label key does not accept *multiline material*, this is where the wrap-label and wrap-label* keys comes into play. Unlike the enumitem package, the align key only supports three options, so what we will do is create a command in the style \parleft of enumitem that allows us to place *multiline labels* using \parbox.

```
\NewDocumentCommand \labelbx { s +m }
{%
   \SuspendTagging{\parbox}%
   \IfBooleanTF{#1}
     {\strut\smash{\parbox[t]{\labelwidth}{\raggedright{#2}}}}%
     {\strut\smash{\parbox[t]{\labelwidth}{\raggedleft{#2}}}}%
   \ResumeTagging{\parbox}%
```

Now we just need to set wrap-label*={\labelbx{#1}}.

SomeThing A short one-line description.

This is an entry without a label.

Something A short one-line description.

Something A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum **long** ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

SoMeThInG A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum **LoNg** ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

enumext v1.5 §.10 References

Final notes

The original implementation (if you can call it that) of the ideas that led to the creation of enumext were some macros using the enumerate[?] package for personal use created in early 2003, the code was quite questionable, but functional for these simple requirements.

With the great answers given by Christian Hupfer in Create a fake label ref using list and the answer given by David Carlisle in Change the use of label ref by data save in an array (list) I managed to create a more solid code than the original version, now using the <code>l3prop[?]</code> and <code>l3seq[?]</code> modules together with the <code>hyperref[?]</code> and <code>enumitem[?]</code> packages, which did the job, but with some limitations.

As time went by I took these limitations as a personal challenge which I called "reinventing the wheel", since there were packages and classes that did more or less what I was looking for, but did not fit my simple requirements. This "reinventing the wheel" finally ended up becoming enumext.

Why list environments?

The answer is simple, first I love the beauty of its syntax and many of what I had already written used the enumerate environment or lists created using the enumitem package. In my mind I thought: how complicated could it be to write a package that looked like enumitem? It seemed simple enough, of course I didn't have in mind the mess I was getting into working with list environments, minipage and adding support for the multicol and hyperref packages.

Of course, seeing the final result of the experiment "reinventing the wheel" I am quite satisfied.

Why not random questions and other utilities

The "random" type questions I love and hate them at the same time, although they simplify a lot the work when creating a multiple choice test, but you lose the beauty of typessetting a document with LaTeX, that is to say the output does not always look as nice as it should, even if they are only alternatives these must follow a certain order when presented either numerical or presentation, that said handling that using *nested lists* is quite complicated so I do not classify to be implemented.

Why has it taken so long?

One of the setbacks, beyond my laziness, was including compatibility with *tagged* PDF. To be honest, it's something I never considered at any point, but I firmly believe that being able to create *accessible documents* provides a great opportunity in the world of mathematics education. From my perspective as a *high school* teacher, beyond theorems and deep mathematics, the use of exercise lists is one of the most common things. Being able to open the way to work in parallel with those who have different abilities is really important and I regret not having looked into this in the past. I hope that enumext serves this purpose and inspires more users and authors to follow this path.

11 Change history

v1.5 (ctan), 2025-06-15Replacing \regex_match: (deprecated) with \regex_if_match:.Add keys beginpenalty, midpenalty and endpenalty.

Improved implementation of the start lroy for targed DDE

v1.4 (ctan), 2025-06-09 — Improved implementation of the start key for *tagged* PDF.

Improved implementation of the ref key.Fixed the behavior of the save-sep key.

Fixed the behavior of the resume* key.
v1.3 (ctan), 2025-06-01
Removed dependency on the scontents package.

- The anskey* environment has been rewritten using the new c-type argument.

v1.2 (ctan), 2025-03-28 - Replace signature (prevent expansion for optional argument).

Solve Inconsistent local/global assignment.

v1.1 (ctan), 2024-11-14 — Fixed implementation for font and base-fix keys.

Added new keys for symbol marks.

- Update and improvements in the internal code.

- Adjustments in the documentation.

v1.0 (ctan), 2024-11-01 - First public release.

Implementation 13

The most recent publicly released version of enumext is available at CTAN: https://www.ctan.org/pkg/ enumext. While general feedback via email is welcomed, specific bugs or feature requests should be reported through the issue tracker: O https://github.com/pablgonz/enumext/issues.

The documentation presented here is far from professional, it contains a lot of obvious information that to the eye of a TeXpert are superfluous, but, after so many years developing this project is the only way to remember what does what.

General conventions

Variables containing i, ii, iii and iv are associated by level with the enumext environment, variables containing v are associated with the keyans environment, variables containing vi are associated with the keyanspic environment, variables containing vii are associated with the enumext* environment and variables containing viii are associated with the keyans* environment.

To simplify writing and documentation some variables and functions that are common to the different levels of the environments are described using a capital "X".

The temporary function __enumext_tmp:n is used in different parts of the package code for variable creation or execution of other functions that are grouped into this one.

All variables and functions defined in this package are private and are NOT intended to work or be used by another package or module.

13.2 Initial set up

Start the DocStrip guards.

```
*package
```

Identify the internal prefix (LTFX3 DocStrip convention) for l3doc class.

```
2 (@@=enumext)
```

Declaration of the package 13.3

First we will make sure we have a minimum (super updated) version of ETFX to work correctly.

```
3 \NeedsTeXFormat{LaTeX2e}[2025-06-01]
```

Now declare the enumext package.

```
4 \ProvidesExplPackage {enumext} {2025-06-15} {1.5} {Enumerate exercise sheets}
```

Finally check if the multicol package are loaded, if not we load it.

```
5 \hook_gput_code:nnn {begindocument} {enumext}
     \IfPackageLoadedTF { multicol }
       {
         \msg_info:nnn { enumext } { package-load } { multicol }
       }
       {
          \msg_info:nnn { enumext } { package-not-load } { multicol }
         \RequirePackage{multicol}[2024-09-14]
       }
   }
```

Definition of variables

Variables that do not appear in this section are created by means of \keys_define:nn or some function described below.

```
\l__enumext_level_h_int
\l__enumext_anskey_level_int
\l__enumext_keyans_level_int
```

command.

```
16 \int_new:N \l__enumext_level_int
                                                                                                                                                                                                                                                         17 \int_new:N \l__enumext_level_h_int
             \label{local_enumext_keyans_pic_level_int} $$ \label{local_enumext_keyans_level_int} $$ \lim_{n\to\infty} N \le \sum_{i=1}^n \operatorname{local_enumext_keyans_level_int} $$ $$ \local_{n\to\infty} N \le \sum_{i=1}^n \operatorname{local_enumext_keyans_level_int} $$ \local_{n\to\infty} N \le \sum_{i=1}^n \operatorname{
                                                                                                                                                                                                                                                         20 \int_new:N \l__enumext_keyans_level_h_int
                                                                                                                                                                                                                                                         1 \int_new:N \l__enumext_keyans_pic_level_int
```

(End of definition for $\l_{enumext_level_int}$ and others.)

13.5 Some utility functions

\keys_precompile:neN \seq_use:NV

Non-standard kernel variants used by the \printkeyans command (§??) and \foreachkeyans command (§??).

```
\cs_generate_variant:Nn \keys_precompile:nnN { neN }
197 \cs_generate_variant:Nn \seq_use:Nn { NV }
```

(End of definition for \keys_precompile:neN and \seq_use:NV.)

enumext scan tokens:n

The functions \tl_rescan:nn and \tl_set_rescan:Nnn provided by expl3 doesn't fit the needs of this package because it does not allow catcode changes inside the argument, so verbatim stuff used inside one of anskey* environment will not work. Here we create a private copy of \tex_scantokens:D which will serve our purposes. See the answer by Ulrich Diez in How do use {<setup>} in \tl_set_rescan:Nnn to replace \scantokens?.

```
198 \cs_new_protected:Npn \__enumext_scan_tokens:n #1 { \tex_scantokens:D {#1} }
(End of definition for \_enumext_scan_tokens:n.)
```

__enumext_at_begin_document:n

A internal "hook" function used for copying plain list and minipage environments definition and hyperref detection.

```
\cs_new_protected:Npn \__enumext_at_begin_document:n #1
      \hook_gput_code:nnn {begindocument} {enumext} { #1 }
    }
```

(End of definition for $_=$ enumext_at_begin_document:n.)

__enumext_before_env:nn

__enumext_after_env:nn A internal "hook" functions for execute code mini-right and mini-right* keys outside the enumext* and keyans* environments and print check-ans outside the enumext and enumext* environments.

```
203 \cs_new_protected:Npn \__enumext_after_env:nn #1 #2
      \hook_gput_code:nnn {env/#1/after} {enumext} {#2}
205
206
207 \cs_new_protected:Npn \__enumext_before_env:nn #1 #2
208
      \hook_gput_code:nnn {env/#1/before} {enumext} {#2}
209
```

(End of definition for $_$ enumext_after_env:nn and $_$ enumext_before_env:nn.)

__enumext_level: Function for check current level in enumext.

```
211 \cs_new:Nn \__enumext_level:
       \int_to_roman:n { \l__enumext_level_int }
213
```

(End of definition for __enumext_level:.)

__enumext_if_is_int:nF __enumext_if_is_int:nTF

__enumext_if_is_int:nT A conditional function to know if the variable we are passing is an integer used by start and widest keys. This function is taken directly from the answer given by Henri Menke in How to test if an expl3 function argument is an integer expression?.

```
_{^{215}} \prg_new_protected_conditional:Npnn \__enumext_if_is_int:n #1 { T, F, TF }
       \regex_if_match:nnTF { ^[\+\-]?[\d]+$ } {#1} % $
         { \prg_return_true: }
         { \prg_return_false: }
    }
©2024-2025 by Pablo González L
```

 $(End\ of\ definition\ for\ _enumext_if_is_int:nT,\ _enumext_if_is_int:nF,\ and\ _enumext_if_is_int:nTF.)$

__enumext_show_length:nnn

Internal function used by show-length key to show "all lengths" calculated and use in enumext, enumext*, keyans and keyans* environments.

(End of definition for __enumext_show_length:nnn.)

__enumext_unskip_unkern:

The function __enumext_unskip_unkern: will remove the last $\langle skip \rangle$ or $\langle kern \rangle$ at execution time using the values 11 and 12 of \lastnodetype to apply \unskip or \unkern according to the case.

 $(End\ of\ definition\ for\ \verb|_-enumext_unskip_unkern:.)$

13.5.1 Utilities for environments and levels

 The function $_$ _enumext_is_not_nested: set the variables $_$ _enumext_standar_bool and $_$ _enumext_starred_bool to "true" only if the environments enumext and enumext* are NOT nested in each other and save the environment name in $_$ _enumext_envir_name_tl.

```
\cs_new_protected:Nn \__enumext_is_not_nested:
    {
236
       \str_case:en { \@currenvir }
237
         {
238
           {enumext}
239
               \tl_set:Nn \l__enumext_envir_name_tl { enumext }
               \bool_lazy_and:nnT
                 { \bool_not_p:n { \g__enumext_standar_bool } }
                 { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
                   \bool_gset_true:N \g__enumext_standar_bool
247
248
           {enumext*}
249
             {
               \tl_set:Nn \l__enumext_envir_name_tl { enumext* }
               \bool_lazy_and:nnT
                 { \bool_not_p:n { \g__enumext_starred_bool } }
                   \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
                   \bool_gset_true:N \g__enumext_starred_bool
                 }
             }
258
         }
259
```

The function $_$ enumext_is_on_first_level: will set the variables $\l_$ enumext_standar_first_bool (§??), $\l_$ enumext_starred_first_bool (§??) to "true" only if the environment is not nested and we are in the "first level" of it . We will also save the start line number of each environment in the variable $\g_$ enumext_start_line_tl and the name of each environment in the variable $\g_$ enumext_envir_name_tl to use in messages related to the check-ans key and .log file.

36/??

```
\bool_set_true:N \l__enumext_standar_first_bool

344
345
```

(End of definition for __enumext_reset_global_vars: and others.)

__enumext_log_global_vars:
__enumext_log_answer_vars:

The function __enumext_log_global_vars: will be passed to the function __enumext_execute_-after_env: and write to the .log file the number of elements saved in the *prop list* and *sequence* created by the save-ans key along with the value of the integer variable created for the resume key.

The function __enumext_log_answer_vars: will be passed to the function __enumext_execute_-after_env: and write to the .log file the number of items and answers along with the difference between them

 $(\textit{End of definition for } \c enumert_log_global_vars: and \c enumert_log_answer_vars:.)$

13.6 Copying list and minipage environments

The list environment provided by LTFX has the following plain form:

```
\label{eq:cont} $$ \left( arg \ one \right) \left\{ \left\langle arg \ two \right\rangle \right\} $$ \left( opt \right) $$ \end{supersent} $$ \left( opt \right) $$ \end{supersent} $$ \end{supersent} $$ \left( opt \right) $$ \end{supersent} $$$ \end{supersent} $$ \end{s
```

And minipage environment provided by LTFX has the following (simplified) plain form:

```
\label{eq:continuous_problem} $$\min[age[\langle pos \rangle][\langle height \rangle][\langle inner-pos \rangle]\{\langle width \rangle\}$ $$\cite{internal implement}$$ \end{substitute}$$\cite{continuous}$$\cite{continuous}$$ \end{substitute}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{continuous}$$\cite{cont
```

As a precaution we copy them using __enumext_at_begin_document:n in case any package redefines the list environment or a related command.

For compatibility with tagged PDF we should use \NewCommandCopy and not \cs_new_eq:NN for \item. When tagged PDF is active \item is redefined using ltcmd (see latex-lab-block[?]).

```
\__enumext_start_list:nn
\__enumext_stop_list:
\__enumext_item_std:w
\__enumext_minipage:w
\__enumext_endminipage:
```

The functions __enumext_start_list:nn and __enumext_stop_list: correspond to copies of \list and \endlist from plain definition of list environment, the function __enumext_item_std:w is a copy of the \item command.

38/??

The functions __enumext_minipage:wand __enumext_endminipage: correspond to copies of \minipage and \endminipage from plain definition of minipage environment.

```
367 \__enumext_at_begin_document:n
368 {
369 \cs_new_eq:NN \__enumext_minipage:w \minipage
370 \cs_new_eq:NN \__enumext_endminipage: \endminipage
371 }
```

(End of definition for __enumext_start_list:nn and others.)

13.7 Compatibility with hyperref and footnotehyper

__enumext_after_hyperref:
__enumext_hypertarget:nn
__enumext_phantomsection:

First we define the necessary rules using "hooks" to determine if the hyperref package is loaded.

```
_{372} \hook_gput_code:nnn { begindocument } { enumext } { \__enumext_after_hyperref: } _{373} \hook_gset_rule:nnnn { begindocument } { enumext } { after } { hyperref }
```

The function __enumext_after_hyperref: sets the state of the boolean variable \l__enumext_-hyperref_bool to "true" if the package is loaded. At this point we will use the public macro \IfHyperBoolean to determine if the hyperfootnotes=true key is present, if so, we set the state of the boolean variable __enumext_footnotes_key_bool to "true".

If the state of the variable \l__enumext_footnotes_key_bool is true we will check if the package footnotehyper is loaded, in case it is not present, we will set the value of \l__enumext_footnotes_-key_bool to false and we will redefine \footnote.

The functions __enumext_hypertarget:nn and __enumext_phantomsection: correspond to the internal copies of \hypertarget and \phantomsection. If the boolean variable \l__enumext_hyperref_bool is false the functions __enumext_hypertarget:nn and __enumext_phantomsection: will be disabled.

 $(\textit{End of definition for } \verb|_= numext_after_hyperref: , \verb|_= numext_hypertarget:nn|, and \verb|_= numext_phantomsection:.)|$

\ enumext newlabel:nn

The function __enumext_newlabel:nn write the information to the .aux file when using the save-ref key. The arguments taken by the function are:

```
#1: \l_enumext_newlabel_arg_one_tl
#2: \l_enumext_newlabel_arg_two_tl
```

The trick here is to manage the number of arguments passed to \newlabel{#1}{#2} according to the presence of the hyperref package.

```
406 \cs_new_protected:Npn \__enumext_newlabel:nn #1 #2
407 {
©2024-2025 by Pablo González L
```

```
\protected@write \@auxout { }
           \token_to_str:N \newlabel {#1}
411
             {
               {#2}

               \bool_if:NT \l__enumext_hyperref_bool
413
                  { { \thepage } {#1} }
414
               { }
415
         }
       \__enumext_hypertarget:nn {#1} { }
       \__enumext_phantomsection:
420
```

13.8 Internal redefining \footnote command

To keep the correct numbering of \footnote and to make it work correctly in the enumext* and keyans* environments and mini-env key it is necessary to redefine the \footnote command. This implementation is adapted from the answer given by Clea F. Rees (@cfr) in footnotes in boxes compatible with hyperref.

__enumext_footnotetext:nn
__enumext_renew_footnote:
__enumext_print_footnote:
 __enumext_renew_footnote_mini:
 __enumext_print_footnote_mini:

Redefinition of the \footnote command using \footnote and \footnote for the mini-env key in the enumext and keyans environments.

```
\cs_new_protected:Nn \__enumext_footnotetext:nn
       \footnotetext[#1]{#2}
423
424
\cs_new_protected:Nn \__enumext_renew_footnote:
       \RenewDocumentCommand \footnote { o +m }
428
           \tl if novalue:nTF {##1}
               \stepcounter{footnote}

We encapsulate the redefinition of \footnote to pass it to the enumext* and keyans* environments. We will run the redefinition when *tagged* PDF is active or when the footnotehyper package is not loaded.

```
}
    }
  \cs_new_protected:Nn \__enumext_print_footnote_starred:
530
531
       \IfDocumentMetadataTF
532
         {
              _enumext_print_footnote_mini:
534
         {
            \bool_if:NF \l__enumext_footnotes_key_bool
                   _enumext_print_footnote_mini:
         }
541
542
```

In enumext* and keyans* environments we need to use "hooks" to print \footnote with support for tagged PDF.

(End of definition for __enumext_renew_footnote_standar: and others.)

13.9 The internal minipage environment

__enumext_internal_mini_page:
 __enumext_mini_env*

The function __enumext_internal_mini_page: creates a internal __enumext_mini_page environment (custom version of minipage) setting the \if@minipage switch to "false" to allow spaces at the "above" of the environment, plus we will add \skip_vertical:N \c_zero_skip to maintain alignment on "top" in the first part and \skip_vertical:N \c_zero_skip in the second part to allow spaces "below". This environment will be used internally by the mini-env key, it is NOT documented in the user interface and is for internal use only. Within this environment we redefine \footnote to make them look the same as if they were elsewhere in the document. This function is passed to the function __enumext_safe_exec: in the enumext environment definition (§??) and __enumext_safe_exec_vii: in the enumext* environment definition (§??)

```
\cs_new_protected:Nn \__enumext_internal_mini_page:
552
       \int_compare:nNnT { \l__enumext_level_int } = { 0 }
553
554
           \DeclareDocumentEnvironment{__enumext_mini_page}{ m }
556
                  _enumext_renew_footnote_standar:
               \__enumext_minipage:w [ t ] { ##1 }
558
                  \legacy_if_gset_false:n { @minipage }
559
                  \skip_vertical:N \c_zero_skip
                  \skip_vertical:N \c_zero_skip
                  _enumext_endminipage:
564
                \__enumext_print_footnote_standar:
565
566
         }
567
```

 $(\mathit{End}\ of\ definition\ for\ \verb|_=enumext_internal_mini_page:\ and\ _=enumext_mini_env^\star.)$

13.10 Definition of public dimension

The package enumext only provides a single public dimension \itemwidth and is intended for user convenience only and is not for internal use as such. This dimension is set in all environments and is only used by the wrap-ans key at its default value.

```
569 \dim_zero_new:N \itemwidth
```

13.11 Definition of counters

__enumext_define_counter:Nn
enumXii
enumXiii
enumXivi
enumXvvi
enumXvvi
enumXvvii

enumXviii

To create the necessary "counters" we must first make sure that they are not already defined by the user or a package such as enumitem, otherwise a error will be returned and the package loading will be aborted. The arguments taken by the function are:

#1: A token list \l__enumext_counter_X_tl for "store" the counter's name.

#2: The counter's name.

The counters created here are enumXi, enumXii, enumXiii and enumXiv for enumext environment, enumXv for keyans environment, enumXvii for keyanspic environment, enumXviii for enumext* and enumXviii for the keyans* environments.

```
579 \__enumext_define_counter:Nn \l__enumext_counter_i_tl { enumXi }
580 \__enumext_define_counter:Nn \l__enumext_counter_ii_tl { enumXii }
581 \__enumext_define_counter:Nn \l__enumext_counter_iii_tl { enumXiii }
582 \__enumext_define_counter:Nn \l__enumext_counter_iv_tl { enumXiv }
583 \__enumext_define_counter:Nn \l__enumext_counter_v_tl { enumXv }
584 \__enumext_define_counter:Nn \l__enumext_counter_vi_tl { enumXvi }
585 \__enumext_define_counter:Nn \l__enumext_counter_vii_tl { enumXvii }
586 \__enumext_define_counter:Nn \l__enumext_counter_viii_tl { enumXviii }
```

(End of definition for __enumext_define_counter: Nn and others.)

13.12 Definition of labels

This part of the code is inspired by the enumitem package. The idea is to be able to access the counters using \arabic*, \Alph*, \alph*, \Roman* and \roman* to use them in the label key.

Tirect support for this is provided since LTEX release 2025-06-01[?], but we will keep the original implementation so as not to hinder the internal "label and ref" system.

__enumext_register_default_label_wd:Nn

These $\langle counters \rangle$ will be used as default $\langle labels \rangle$ if the label key is not used for the different levels of the enumext, enumext*, keyans and keyans* environments, so it is necessary to get a default value for labelwidth from these $\langle labels \rangle$ at the same time.

```
cs_new_protected:Npn \__enumext_register_default_label_wd:Nn #1 #2

final factor for the first state of the first state of
```

__enumext_label_width_by_box:Nn __enumext_label_width_by_box:cv The function $\ensuremath{\verb|_enumext_label_width|}$ by $\ensuremath{\verb|by_box:Nn|}$ set the default $\ensuremath{\verb|labelwidth|}$ using a box width if no labelwidth key is passed.

```
597 \cs_new_protected:Npn \__enumext_label_width_by_box:Nn #1 #2
598 {
599    \hbox_set:Nn \l__enumext_label_width_by_box {#2}
600    \dim_set:Nn #1 { \box_wd:N \l__enumext_label_width_by_box }
601    }
602 \cs_generate_variant:Nn \__enumext_label_width_by_box:Nn { cv }
```

 $(\textit{End of definition for } \c\c\c) = \texttt{enumext_label_width_by_box:Nn.})$

__enumext_label_style:Nnn
__enumext_label_style:cvn

The function __enumext_label_style: Nnn is used by the label key to creates the variables containing the $\langle label\ style \rangle$ and will allow to use \arabic*, \alph*, \alph*, \Roman* and \roman* as arguments. It loops through the defined counter styles in \g__enumext_counter_styles_tl (\arabic, \alph, \alph, \roman and \Roman) for example, looking for \roman* and replacing that by \roman{\cutecounter}, and doing the same for the \g__enumext_widest_label_tl to keep both in sync.

13.14 Setting label and ref keys

The implementation of the keys label and ref are part of the core of the package enumext, here the default values for $\langle label \rangle$, the value of the variables \l__enumext_label_X_tl, the default values for \labelwidth and the "label and ref" system.

13.14.1 Define and set label and ref keys for enumext environment

label Here we set the default $\langle labels \rangle$ of the four levels of enumext environment, along with the default value for

```
labelwidth key and ref key.
  \l__enumext_label_i_tl
                          702 \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
 \l__enumext_label_ii_tl
\l__enumext_label_iii_tl
                                 \keys_define:nn { enumext / #1 }
\l__enumext_label_iv_tl
                                   {
                                     label .code:n
                                                            \__enumext_label_style:cvn { l__enumext_label_#2_tl }
                          707
                                                             { l__enumext_counter_#2_tl } {##1}
                          708
                                                           \dim_set_eq:cN { l__enumext_labelwidth_#2_dim }
                          709
                                                              \l__enumext_current_widest_dim
                                                         },
                                     label .initial:n = #3,
                                     label .value_required:n = true,
                                                       = \__enumext_standar_ref:n {##1},
                          ©2024-2025 by Pablo González L
```

(End of definition for label and others.)

__enumext_standar_ref:n
__enumext_standar_ref:

The __enumext_standard_ref:n function will first pass the key argument ref to the variable \l__enumext_ref_key_arg_tl and analyze its state, if it is not empty it will set a copy of of the current counter style save in \l__enumext_the_counter_X_tl to \l__enumext_ref_the_count_tl and then set the variable \l__enumext_renew_counter_X_tl which will modify \theenumX.

```
722 \cs_new_protected:Npn \__enumext_standar_ref:n #1
      \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
      \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
         {
           \msg_error:nnn { enumext } { key-ref-empty } { enumext }
        }
728
         {
729
           \tl_set_eq:Nc \l__enumext_ref_the_count_tl
730
               l__enumext_the_counter_ \__enumext_level: _tl
           \tl_set:ce { l__enumext_renew_counter_ \__enumext_level: _tl }
734
               \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl }
                 { \exp_not:V \l__enumext_ref_key_arg_tl }
738
        }
739
740
```

Finally the function __enumext_standar_ref: will execute the modification for the reference system in the second argument of the environment definition enumext.

 $(\textit{End of definition for } \verb|\|_enumext_standar_ref:n | and \verb|\|_enumext_standar_ref:.)$

13.14.2 Define and set label and ref keys for enumext* and keyans* environments

label Here we set the default $\langle labels \rangle$ for enumext* and keyans* environments, along with the default value for ref labelwidth key and ref key.

```
\l__enumext_label_viii_tl

13.15 Setting start, start* and widest keys

__enumext_start_from:NNn
__enumext_start_from:ccn
__enumext_start_from:cce

The function __enumext_start_from: NNn used by start and start* keys take three arguments:

```
#1: \l__enumext_label_X_tl
#2: \l__enumext_start_X_int
#3: \langle integer or string \rangle
```

The first argument of this function are the "counter style" set by label key, the second argument is returned by the function, the third argument can be an $\langle integer \rangle$ or $\langle string \rangle$ of the form \Alph , $\$

```
\cs_new_protected:Npn \__enumext_start_from:NNn #1 #2 #3
853
       \__enumext_if_is_int:nTF { #3 }
         {
            \int_set:Nn #2 {#3}
          }
857
          {
858
            \regex_if_match:nVT { \c{Alph} | \c{alph} } {#1}
859
              { \int_set:Nn #2 { \int_from_alph:n {#3} } }
860
            \regex_if_match:nVT { \c{Roman} | \c{roman} } {#1}
              { \int_set:Nn #2 { \int_from_roman:n {#3} } }
863
865 \cs_generate_variant:Nn \__enumext_start_from:NNn { ccn, cce }
```

(End of definition for __enumext_start_from: NNn.)

__enumext_widest_from:nNNn _enumext_widest_from:nccn

The function __enumext_widest_from: nNNn used by the widest key take four arguments:

```
#1: The counter associated with the environment level
```

```
#2: \l__enumext_label_X_tl
#3: \l__enumext_labelwidth_X_dim
```

#4: (integer or string)

866 \cs_new_protected:Npn __enumext_widest_from:nNNn #1 #2 #3 #4

The second and third arguments of this function are the values set by label and labelwidth keys, the four argument can be an $\langle integer \rangle$ or $\langle string \rangle$ of the form \Alph, \alph, \Roman or \roman. The value of the four argument is set temporarily for the identified counter in this point (level), then the value is expanded into a "box" and the "width" of the "box" is returned.

```

 $(End\ of\ definition\ for\ topsep\ and\ others.)$

13.18 Setting base-fix key

When nesting starting right after \item (without material between them) there is a problem with the alignment of the *baseline* between the two environments. One way to get around this problem is to place \mode_leave_vertical: apply \vspace{-\baselineskip} and set \topsep=0pt for the "first level" of the nested enumext environment.

```
972 base-fix .value_forbidden:n = true,
973 }
```

The function __enumext_nested_base_line_fix: passed to the __enumext_parse_keys:n function in the definition of the enumext environment (\S ??) will be responsible for applying the baseline correction and adjusting the $\langle keys \rangle$ for the enumext environment and the \printkeyans with starred argument '*' (\S ??). We will first implement the function code from the user side of the base-fix key, that is, only the user knows when it is necessary to apply it within the document in which case the variable \l_enumext_print_-keyans_star_bool set by the \printkeyans command is false and the variable \l_enumext_base_-line_fix_bool is true.

We set the values of the keys topsep, above and above* for the "first level" of enumext environment equal to Opt and finally set the variable \l__enumext_base_line_fix_bool to false.

```
974 \cs_new_protected:Nn \__enumext_nested_base_line_fix:
975
       \bool_lazy_all:nT
           { \bool_if_p:N \l__enumext_starred_first_bool }
           { \bool_if_p:N \l__enumext_base_line_fix_bool }
           { \bool_not_p:n { \l__enumext_print_keyans_star_bool } }
980
        }
981
        {
982
           \mode_leave_vertical:
983
           \vspace { -\dim_eval:n { \baselineskip + \parsep } }
984
           \keys_set:nn { enumext / level-1 }
985
               topsep = Opt, above = Opt, above* = Opt,
             7
         }
```

When we are running the \printkeyans command with the *starred argument* '*' the variable \l_-enumext_print_keyans_star_bool is true and we can run a simplified version of \vspace using \skip_vertical:n.

```
\bool_lazy_and:nnT
         { \bool_if_p:N \l__enumext_starred_first_bool }
         { \bool_if_p:N \l__enumext_print_keyans_star_bool }
992

1002
     }
1003
```

 $(\textit{End of definition for base-fix} \ \textit{and} \ \backslash _\texttt{enumext_nested_base_line_fix:.})$

13.19 Setting keys for horizontal spaces

Define and set itemindent, rightmargin, listparindent, list-offset and list-indent keys for enumext, enumext*, keyans and keyans* environments.

```
rightmargin er
listparindent 1004
list-offset 1005
list-indent 1006
```

itemindent

```
\cs_set_protected:Npn \__enumext_tmp:nn #1 #2
       \keys_define:nn { enumext / #1 }
         {
           itemindent
                          .dim_set:c = { l__enumext_fake_item_indent_#2_dim },
1008
           itemindent
                          .value_required:n = true,
           rightmargin
                          .dim_set:c = { l__enumext_rightmargin_#2_dim },
1010
           rightmargin
                          .value_required:n = true,
1011
           listparindent .dim_set:c = { l__enumext_listparindent_#2_dim },
1012
           listparindent .value_required:n = true,
1013
           list-offset
                          .dim_set:c = { l__enumext_listoffset_#2_dim },
           list-offset
                          .value_required:n = true,
           list-indent
                          .code:n
                            \bool_set_true:c { l__enumext_leftmargin_tmp_#2_bool }
                            \dim_set:cn { l__enumext_leftmargin_tmp_#2_dim } {##1},
1018
           list-indent
                          .value_required:n = true,
1019
         }
1020
1021
```

```
\clist_map_inline:nn
     {
       {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {keyans}{v}
1025
1026
     { \__enumext_tmp:nn #1 }
```

(End of definition for itemindent and others.)

For enumext* and keyans* environments the situation is a bit different, the list-indent key behaves like the list-offset key.

```

13.22 Setting keys for multicols and minipage

mini-env mini-sep columns-sep columns The default value of the columns-sep key is handled by the state of the boolean variable \l__enumext_-columns_sep_X_bool which is handled in the internal definition of the enumext and keyans environments. Define and set mini-env, mini-sep, columns-sep and columns keys for enumext, enumext*, keyans and keyans* environments.

```
\cs_set_protected:Npn \__enumext_tmp:nn #1 #2
       \keys_define:nn { enumext / #1 }
         {
           mini-env
                        .dim_set:c = { l__enumext_minipage_right_#2_dim },
           mini-env
                        .value_required:n = true,
           mini-sep
                        .dim_set:c = { l__enumext_minipage_hsep_#2_dim },
1105
           mini-sep
                        .initial:n = 0.3333em,
1196
           mini-sep
                        .value_required:n = true,
1197
           columns-sep .dim_set:c = { l__enumext_columns_sep_#2_dim },
1198
           columns-sep .value_required:n = true,
1199
           columns
                        .int_set:c = { l__enumext_columns_#2_int },
           columns
                        .initial:n = 1,
           columns
                        .value_required:n = true,
         }
1205 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

For enumext* and keyans* environments the situation is a bit different, the command \miniright is not available, so we will add the keys mini-right and mini-right* to implement support for minipage environment.

```
\cs_set_protected:Npn \__enumext_tmp:nn #1 #2
     {
1207
       \keys_define:nn { enumext / #1 }
1208
           mini-right .tl_gset:c = { g__enumext_miniright_code_#2_tl },
           mini-right .value_required:n = true,
           mini-right* .code:n
                                      \bool_gset_true:c { g__enumext_minipage_center_#2_bool }
                                      \keys_set:nn { enumext / #1 } { mini-right = {##1} }
1214
                                    },
           mini-right* .value_required:n = true,
         }
1218
1219 \clist_map_inline:nn { {enumext*}{vii}, {keyans*}{viii} } { \__enumext_tmp:nn #1 }
```

(End of definition for mini-env and others.)

13.23 Adjustment of vertical spaces for multicols

When nesting a "list environment" inside the multicols environment, the values of the "vertical spaces" are lost, basically the multicols environment takes control over them. Graphically it can be seen like in the figure ??.

Figure 7: Representation of the vertical space in multicols for a nested level.

To keep the desired spaces *above* and *below* in the "list environment" (\topsep + [\partopsep]) it is necessary to "adjust" the spaces added by the multicols environment. The most appropriate option in this case is to use a "context sensitive" vertical space with \addvspace.

I should make it clear that the implementation here is a "bit questionable". At first glance doing \multicolsep=\topsep seemed right, but the results were not always as expected. An almost imperceptible detail is that in some cases the \itemsep values of are "stretched", possibly due to the use of \raggedcolumns and this affects the lower space when closing the environment, which is "smaller" than expected. My attempts to find the correct values using \showoutput and \showboxdepth absolutely failed.

13.23.1 Adjustment of vertical spaces for multicols in enumext

__enumext_multi_set_vskip:

The function __enumext_multi_set_vskip: will take care of determining the "adjusted spaces" that we will apply "above" and "below" the multicols environment in enumext.

We will set the default values taking into account that TeX is in $\langle horizontal \ mode \rangle$, then we will make the settings for the $\langle vertical \ mode \rangle$ in which $\langle partopsep \ comes$ into play.

Set the values of \l__enumext_multicols_above_X_skip and \l__enumext_multicols_below_X_skip equal to the value of \topsep in the *current level*.

(End of definition for __enumext_multi_set_vskip:.)

__enumext_add_pre_parsep:

The function $_$ _enumext_add_pre_parsep: "adjusted" the value of $_$ _enumext_multicols_above_-X_skip detecting the value of $_$ parsep from the previous level. This is necessary since $_$ parsep from the previous level affects the vertical spaces.

```
\cs_new_protected:Nn \__enumext_add_pre_parsep:
     {
       \int_case:nn { \l__enumext_level_int }
1234

13.24 Adjustment of vertical spaces for minipage

When nesting a "list environment" within the minipage environment, the values of the "vertical spaces" are lost. Graphically it can be seen like in the figure ??.

Figure 8: Representation of the minipage spacing adjustment for a nested level.

Since we want to keep the "left" and "right" environments "aligned on top", preserving the \baselineskip and keep the desired "spaces" (\topsep + [\partopsep]) it is necessary to "adjust" the "vertical spaces" for minipage environments.

Here there are several complications that we must circumvent, the minipage environment eliminates the "top" spaces, the multicols environment can be nested in the minipage environment, the "top" and "bottom" spaces are affected when topsep=0pt and to this is added the \partopsep parameter that comes into action according to whether TEX is in \(\lambda \text{horizontal mode} \rangle \text{ overtical mode} \rangle. \) Depending on these cases, small adjustments must be made using \vspace and \addvspace to obtain the "desired vertical spacing".

Again I must make clear that the implementation here is a "bit questionable", but hunting the spaces (glue) produced by the minipage environment is quite complicated, even more if multicols it is nested. The setting of the values was more "trial and error" (approx to \strutbox), using the help of the lua-visual-debug[?] package, again my attempts to find the correct values using \showoutput and \showboxdepth absolutely failed.

13.24.1 Adjustment of vertical spaces for minipage in enumext

__enumext_minipage_set_skip:
__enumext_minipage_add_space:

The function __enumext_minipage_set_skip: will take care of determining the "adjust" spaces that we will apply "above" and "below" the __enumext_mini_page environment in enumext.

First we will set the value of $\lower = 1$ then we will see if TEX is in $\langle vertical\ mode \rangle$ and we will add $\langle partopsep \rangle$, followed by that we set the value of $\lower = 1$ minipage_after_skip.

```
\[
\text{i310} \cs_new_protected:Nn \__enumext_minipage_set_skip:
\]
\[
\text{i311} \text{\skip_set:Nn \l__enumext_minipage_right_skip} \\
\text{\skip_use:c { l__enumext_topsep_ \__enumext_level: _skip } \\
\text{i314} \quad \text{\skip_use:c { l__enumext_topsep_ \__enumext_level: _skip } \\
\text{i316} \quad \text{\mode_if_vertical:T} \\
\text{\skip_add:Nn \l_enumext_minipage_right_skip} \\
\text{\skip_use:c { l__enumext_partopsep_ \_enumext_level: _skip } \\
\text{\skip_use:c { l__enumext_partopsep_ \_enumext_level: _skip } \\
\text{\skip_set_eq:NN \l_enumext_minipage_after_skip \l_enumext_minipage_right_skip} \\
\text{\skip_set_eq:NN \l_enumext_minipage_after_skip \l_enumext_minipage_right_skip} \\
\end{align*\]
\[
\text{skip_set_eq:NN \l_enumext_minipage_after_skip} \l_enumext_minipage_right_skip} \\
\end{align*\]
\[
\text{skip_set_eq:NN \l_enumext_minipage_after_skip} \l_enumext_minipage_right_skip} \\
\end{align*\]
\[
\text{skip_set_eq:NN \l_enumext_minipage_after_skip} \l_enumext_minipage_right_skip} \\
\end{align*\}
\]
\[
\text{skip_set_enumext_minipage_after_skip} \l_enumext_min
```

We will adjust the values $\lowereal_{multicols_above_X_skip}$ and $\lowereal_{multicols_below_X_skip}$ and call the function $\lowereal_{multicols_skip}$.

If the environment multicols is active, we set \topskip=0pt and then we make \multicolsep have the same value as \l_enumext_multicols_above_X_skip.

```
\int_compare:nNnT
{ \int_use:c { l__enumext_columns_ \__enumext_level: _int } } > { 1 }

{
\skip_zero:N \topskip
\skip_set_eq:Nc \multicolsep { l__enumext_multicols_above_ \__enumext_level: _skip }

}
```

The function __enumext_minipage_add_space: will apply the spaces on the "left side" using \addvspace "above" the __enumext_mini_page environment, taking into account whether TeX is in \(\lambda \) norizontal mode \(\rangle \) or \(\lambda \) vertical mode \(\rangle \). Here we use the plain TeX macro \(\rangle \) nointerlineskip to prevent baseline "glue" being added between the next pair of boxes in a vertical list. For the latter we will make some adjustments since the \(\rangle \) partopsep parameter comes into play and this affects the vertical spacing.

```

```

(End of definition for __enumext_mini_addvspace_vii: and __enumext_mini_addvspace_viii:.)

13.24.4 The command \miniright

The command \miniright will close the __enumext_mini_page environment on the "left side", open the __enumext_mini_page environment on the "right side" adding the adjusted vertical space. By default we will add \centering when starting the "right side" environment. The starred argument '*' inhibits the use of \centering command i.e. the usual LTEX justification is maintained in the __enumext_mini_page on the "right side".

\minirigh

First we will perform some checks to prevent the command from being executed outside the enumext environment or somewhere inappropriate then we will call the internal functions to execute it in the enumext and keyans environments.

```
1630 \NewDocumentCommand \miniright { s }

1655
1656
```

(End of definition for \miniright. This function is documented on page ??.)

__enumext_mini_right_cmd:n

The function __enumext_mini_right_cmd:n takes as argument the *starred* '*' of the \miniright command in the enumext environment. We check if the mini-env key is active via the variable \l__enumext_-minipage_right_X_dim, if so we close the multicols environment with the __enumext_mini_page environment on the "left side", then we open the __enumext_mini_page environment on the "right side",

apply our adjusted "vertical spaces", followed by adding the \centering command when the starred argument '*' is not present and set zero \g__enumext_minipage_stat_int, otherwise we return an error.

```

3.25 Setting above and below keys

While having controlled the *vertical spaces* within the enumext and keyans environments when using the columns or mini-env keys, sometimes the "*vertical spaces above*" or "*vertical spaces below*" the environments are not as expected and it is necessary to be able to apply a "*fine correction*" to these. As I have not been able

to correct these *glitches*, the best option is to leave a couple of $\langle keys \rangle$ dedicated to this purpose, in this case it is best to use \vspace or \vspace* when convenient.

Define above, above*, below and below* keys for enumext and keyans environments.

```
above*
       '713 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
 below
       1714
below*
               \keys_define:nn { enumext / #1 }
       1716
                   above
                         .skip_set:c = { l__enumext_vspace_above_#2_skip },
                          .value_required:n = true,
                   above
                   above* .code:n
                                      = \bool_set_true:c { l__enumext_vspace_a_star_#2_bool }
                                        \keys_set:nn { enumext / #1 } { above = {##1} },
                   above* .value_required:n = true,
                   below .skip_set:c = { l__enumext_vspace_below_#2_skip },
                   below .value_required:n = true,

Setting series, resume and resume* keys

The series key is responsible for the whole process of the resume and resume* keys. The idea behind this is to be able to absorb the $\langle keys \rangle$ passed to the *optional argument* of the "first level" of the environments enumext and enumext*, but, discarding some specific (keys). This implementation is adapted directly from the code provided by Jonathan P. Spratte (@Skillmon) in chat-TeX-SX

We define the keys series, resume and resume* only for the "first level" of enumext and enumext*. resume 1824 \cs_set_protected:Npn __enumext_tmp:n #1 resume* 1825 \keys_define:nn { enumext / #1 } series .str_set:N = \l__enumext_series_str, series .value_required:n = true, resume .code:n = __enumext_resume_series:n {##1}, resume* .code:n = __enumext_resume_starred:, resume* .value_forbidden:n = true, 1832 } 1833 1834 \clist_map_inline:nn { level-1, enumext* } { __enumext_tmp:n {#1} }

13.27.3 The check answer mechanism

The internal mechanism for "checking answers" follows this logic:

If the line begins with \item or \item* and does NOT open a nested environment, each \item or \item* must contain a single execution of the \anskey command, i.e. the counter of the executions of the \anskey command must be equal to the counter associated with the sum of executions of \item and \item*.

If the line begins with \item or \item* and opens a nested environment each \item or \item* in the nested environment must have a *single* execution of the \anskey command and the counter associated to the sum of \item* and \item* executions must decrementing by "one" to maintain equality.

In order for the mechanism for the check-answer to work (not counting keyans, keyans* and keyanspic) we need:

- 1. We must keep track of the total number of \item and \item* (enumerated) that appear within the environment including the nested levels.
- 2. We must keep track of the total number of \item and \item* (enumerated) that appear per level of nesting.
- 3. Keeping track of the number of times the environment nests.

The integer variable associated to the sum of each \item and \item* in the environment \g__enumext_-item_number_int must match the integer variable \g__enumext_item_anskey_int associated to the execution of the command \anskey. We analyze the cases:

- a) If the list only has one level the number of \item + \item* = \anskey
- b) If the list has *nested levels*, for each level of nesting we need to decrementing by one (for the \item or \item* that opens the nest) so that the account remains the same.

With keyans, keyans* and keyanspic it is enough to increase in one the integer of \anskey. The integers created must be global if they are not lost in the interior levels of nesting and to execute the test we will use a "hook" function after closing the first level of the environment.

13.27.4 Setting check-ans and no-store keys

check-ans Now we define the keys check-ans and no-store for all levels of enumext and enumext* environments.

```
21,42 {
21,43 level-1, level-2, level-3, level-4, enumext*
21,44 }
21,45 { \__enumext_tmp:n {#1} }
```

(End of definition for check-ans and no-store.)

13.27.5 Set-up check answer mechanism

__enumext_check_ans_active:
__enumext_check_ans_level:

The function __enumext_check_ans_active: will first check the state of the variable \l__enumext_-store_name_tl, that is, the save-ans key is active, if so it will check the state of the variable \l__enumext_-check_answers_bool handled by the key no-store and will execute the function __enumext_check_-ans_level: only if "true", i.e. the key no-store is not active.

```
2146 \cs_new_protected:Nn \__enumext_check_ans_active:
2147 {
2148 \tl_if_empty:NF \l__enumext_store_name_tl
2149 {
2150 \bool_if:NT \l__enumext_check_answers_bool
2151 {
2152 \__enumext_check_ans_level:
2153 }
2154 }
```

The function __enumext_check_ans_level: will decrement by "one" the value of the variable \g__-enumext_item_number_int which keeps track of the executions of \item and \item* for each level of nesting of the environment enumext, taking into account whether it is nested within enumext* or the opposite and set \l__enumext_item_number_bool to "false".

```
\cs_new_protected:Nn \__enumext_check_ans_level:
     {
       \int_case:nn { \l__enumext_level_int }
2158
         {
2159
           { 1 }{
2160
                   \bool_lazy_all:nT
                       { \bool_if_p:N \g__enumext_starred_bool }
                         \int_compare_p:nNn { \l__enumext_level_h_int } = { 1 } }
                     }
                     {
                       \int_gdecr:N \g__enumext_item_number_int
2167
                       \bool_set_false:N \l__enumext_item_number_bool
2168
2169
           { 2 }{
2171
                   \int_gdecr:N \g__enumext_item_number_int
                   \bool_set_false:N \l__enumext_item_number_bool
           { 3 }{
                   \int_gdecr:N \g__enumext_item_number_int
                   \bool_set_false:N \l__enumext_item_number_bool
2178
           { 4 }{
2179
                   \int_gdecr:N \g__enumext_item_number_int
                   \bool_set_false:N \l__enumext_item_number_bool
2181
2182
```

We should only execute this if enumext* is nested in the "first level" of enumext, for the rest of the cases the value of \g_enumext_item_number_int is already decreased.

```
\int_case:nn { \l__enumext_level_h_int }
2184
         {
2185

13.28.2 Storing structure of the environments

The idea behind "storing structure" in the sequence is to have a copy of the structure of the environment in which the key save-ans is being executed so we must capture the optional argument passed to the levels of the environment in which it is executed and "storing" this in the sequence.

__enumext_store_active_keys:n __enumext_store_active_keys_vii:n The functions __enumext_store_active_keys:n and __enumext_store_active_keys_vii:n will be responsible for the "storing keys" filtered from the optional argument of the environment in which the key save-ans is executed and the levels within this for the enumext and enumext* environments. We will execute this function only if the variable \l__enumext_store_save_key_X_bool is false, that is, the key store-key is not active, establishing the variable \l__enumext_store_save_key_X_tl with the filtered $\langle keys \rangle$.

```
\cs_new_protected:Npn \__enumext_store_active_keys:n #1
       \bool_if:cF { l__enumext_store_save_key_ \__enumext_level: _bool }
         {
           \tl_clear:c { l__enumext_store_save_key_ \__enumext_level: _tl }
           \tl set:ce
2396
             { l__enumext_store_save_key_ \__enumext_level: _tl }
2397
             { \__enumext_filter_save_key:n {#1} }
2398
2400
   \cs_new_protected:Npn \__enumext_store_active_keys_vii:n #1
2401
       \bool_if:NF \l__enumext_store_save_key_vii_bool
         {
           \tl_clear:N \l__enumext_store_save_key_vii_tl
           \tl_set:Ne \l__enumext_store_save_key_vii_tl { \__enumext_filter_save_key:n {#1} }
2406
         }
2407
2408
```

(End of definition for __enumext_store_active_keys:n and __enumext_store_active_keys_vii:n.)

13.28.3 Setting save-key key

Since this "storing structure" in the sequence established by the save-ans key when executing \anskey or anskey*, we will not be able to modify it. The best thing here is to have a key that allows you to modify the optional argument of the "storing structure" in the sequence.

save-key

The values set by this key passed in the *optional argument* of the enumext and enumext* environments will override the values of the \l_enumext_store_save_key_X_tl variable set by the functions _enumext_store_active_keys:n and _enumext_store_active_keys_vii:n. Now define the key save-key for all levels of enumext and enumext* environments.

```
\cs_set_protected:Npn \__enumext_tmp:n #1
2410
       \keys_define:nn { enumext / enumext* }
           save-key .code:n = \__enumext_parse_save_key_vii:n {##1},
           save-key .value_required:n = true,
         }
2415
       \keys_define:nn { enumext / #1 }
2416
2417
         {
           save-key .code:n = \__enumext_parse_save_key:n {##1},
2418
           save-key .value_required:n = true,
2419
2420
2421
   \clist_map_inline:nn { level-1, level-2, level-3, level-4 } { \__enumext_tmp:n {#1} }
```

(End of definition for save-key.)

__enumext_parse_save_key:n
_enumext_parse_save_key_vii:n

The functions __enumext_parse_save_key:n and __enumext_parse_save_key_vii:n will be responsible for "storing keys" in the variable \l__enumext_store_save_key_X_tl for enumext and enumext*.

```
2423 \cs_new_protected:Npn \__enumext_parse_save_key:n #1
2424
       \bool_set_true:c { l__enumext_store_save_key_ \__enumext_level: _bool }
2425
       \tl_clear:c { l__enumext_save_key_ \__enumext_level: _tl }
2426
       \tl_set:ce
2427
         { l__enumext_store_save_key_ \__enumext_level: _tl }
         { \__enumext_filter_save_key:n {#1} }
2430
   \cs_new_protected:Npn \__enumext_parse_save_key_vii:n #1
2431
2432
       \bool_set_true:N \l__enumext_store_save_key_vii_bool
2433
       \tl_clear:N \l__enumext_store_save_key_vii_tl
2434
       \tl_set:Ne \l__enumext_store_save_key_vii_tl { \__enumext_filter_save_key:n {#1} }
2435
2436
```

 $(\textit{End of definition for } \verb|_=enumext_parse_save_key:n and \verb|_=enumext_parse_save_key_vii:n.)$

13.28.4 Internal functions to store optional arguments

__enumext_filter_save_key:n
_enumext_filter_save_key_key:n
_enumext_filter_save_key_pair:nn

The function __enumext_filter_save_key:n will be in charge of "filtering keys" we want to stored in sequence where {#1} represents the optional argument passed to the environment.

The function __enumext_filter_save_key_key:n will be responsible for "filtering keys" that are passed "without value" by excluding the resume, resume*, no-store and base-fix keys.

The function __enumext_filter_save_key_pair:nn will be responsible for "filtering keys" that are passed "with value" by excluding the series, resume, save-ans, save-ref, save-key, check-ans, show-ans, save-pos, mark-ans, mark-pos, mark-sep, wrap-ans, mark-ans*, mark-pos*, mark-sep*, wrap-ans*, wrap-opt, save-sep, mark-ref, mini-env, mini-sep, mini-right and mini-right* keys.

```
2454 \cs_new:Npn \__enumext_filter_save_key_pair:nn #1#2
     {
2455
       \str_case:nnF {#1}

            { series
                                                                 } {} { save-ref } {}
2458
            \{ \text{ save-key } \} \{ \} \{ \text{ check-ans } \} \{ \} \{ \text{ show-ans } \}
                                                               } {} { show-pos } {}
2459
            { mark-ans } {} { mark-pos } {} { mark-sep
                                                                 } {} { wrap-ans } {}
            { mark-ans* } {} { mark-pos* } {} { mark-sep*
                                                                 } {} { wrap-ans* } {}
            { wrap-opt } {} { save-sep } {} { mark-ref
                                                                 } {} { mini-env } {}
            { mini-sep } {} { mini-right } {} { mini-right* } {}
         }
         { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
2465
2466
```

(End of definition for __enumext_filter_save_key:n, __enumext_filter_save_key_key:n, and __enumext_filter_save_key_pair:nn.)

13.28.5 Function for storing content in prop list

__enumext_store_addto_prop:n
__enumext_store_addto_prop:V

The function $_$ enumext_store_addto_prop:n stores the { $\langle content \rangle$ } in *prop list* defined by save-ans key. The "stored content" is retrieved by means of the $\$ getkeyans command.

The form in which the $\{\langle content \rangle\}$ is "stored" in the prop list is $\{\langle position \rangle\} \{\langle content \rangle\}$. This function is used by \anskey in enumext and enumext* environments, \item* in keyans and keyans* environments and \anspic* in keyanspic environment.

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_store_addto_prop:n.)$

13.28.6 Function for storing content in sequence

__enumext_store_addto_seq:n
__enumext_store_addto_seq:v
__enumext_store_addto_seq:V

The function $_$ enumext_store_addto_seq:n stores the $\{\langle content \rangle\}$ in sequence defined by save-ans key. This function is used by $\$ nskey in enumext, $\$ item* in keyans and $\$ nspic in keyanspic.

The form in which the $\{\langle content \rangle\}$ is stored in sequence is in a internal enumext or enumext* environments with the "same structure" in which the command was executed.

The "stored content" is retrieved by means of the \printkeyans command.

```
2476 \cs_new_protected:Npn \__enumext_store_addto_seq:n #1
2477 {
2478     \seq_gput_right:cn { g__enumext_ \l__enumext_store_name_tl _seq } { #1 }

13.29 The internal label and ref

The function __enumext_store_internal_ref: handles the "internal label and ref" system used by the save-ref and mark-ref keys for \anskey will allow to execute \ref{\store name: position}} and will return 1.(a).i.A.

__enumext_store_internal_ref:

First we will remove the dots "." from the current $\langle labels \rangle$, we do not want to get double dots in our references, then we will place this in the variable \l_enumext_newlabel_arg_two_tl.

Here we need to analyse the cases where the environment is started with enumext* and if \anskey or anskey* is running alone in it or if it is running in a nested enumext environment within the starting environment.

```
\bool_lazy_all:nT
2569
         {
           { \bool_if_p:N \g__enumext_starred_bool }
2571
            { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
         }
2573
         {
           \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
              { \tl_use:N \l__enumext_label_copy_vii_tl }
         }
       \bool_lazy_all:nT
2578
         {
           { \bool_not_p:n { \g__enumext_standar_bool } }
2580
           { \bool_if_p:N \l__enumext_standar_bool }
2581
            { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
2582
         }
2583
         {
2584
           \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
                \tl_use:N \l__enumext_label_copy_vii_tl
               \int_step_function:nnN { 1 } { \l__enumext_level_int } \__enumext_tmp:n
2589
         }
```

If started with enumext and if \anskey or anskey* is running alone in it or if it is running in a nested enumext* environment within the starting environment.

```
\bool_lazy_all:nT
         {
2592
           { \bool_if_p:N \g__enumext_standar_bool }
           { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
           { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
         }
2596
         {
2597
           \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2598
2599
               \tl_use:N \l__enumext_label_copy_i_tl
               \int_step_function:nnN { 2 } { \l__enumext_level_int } \__enumext_tmp:n
         }
       \cs_set:Npn \__enumext_tmp:n ##1
         { \tl_use:c { l__enumext_label_copy_ \int_to_roman:n {##1} _tl } . }
```

```
\bool_lazy_all:nT
         {
           { \bool_if_p:N \g__enumext_standar_bool }
           { \bool_if_p:N \l__enumext_starred_bool }
           { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
         }
2611
         {
2612
            \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2613
                \int_step_function:nnN { 1 } { \l__enumext_level_int } \__enumext_tmp:n
                \tl_use:N \l__enumext_label_copy_vii_tl
2617
2618
Now we set the variable \l__enumext_newlabel_arg_one_tl which will contain {\store name: position\}.
       \tl_put_right:Ne \l__enumext_newlabel_arg_one_tl
         {
           \l__enumext_store_name_tl \c_colon_str
           \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } }
2623
Now execute the function \__enumext_newlabel:nn and save the result in the variable \l__enumext_-
write_aux_file_tl and finally we write in the .aux file.
       \tl_put_right:Ne \l__enumext_write_aux_file_tl
         {
2625
            \__enumext_newlabel:nn
              { \exp_not:V \l__enumext_newlabel_arg_one_tl }
              { \l__enumext_newlabel_arg_two_tl }
       \l__enumext_write_aux_file_tl
2630
2631
(End of definition for \__enumext_store_internal_ref:.)
```

Common functions for \anskey and anskey* environment

__enumext_store_anskey_arg:n

The internal function $_$ enumext_store_anskey_arg:n first we pass the $\{\langle argument \rangle\}$ to the *prop list*, then checks the state of the variable \l__enumext_store_ref_key_bool handled by the save-ref key and will call the function __enumext_store_internal_ref: for the "internal label and ref" system. Followed by this if the show-ans or show-pos keys are active we will show the "wrapped" { \(\argument \) \}.

```
\cs_new_protected:Npn \__enumext_store_anskey_arg:n #1
2632
2633
       \int_gincr:N \g__enumext_item_anskey_int
2634
       \__enumext_store_addto_prop:n {#1}
2635
       \bool_if:NT \l__enumext_store_ref_key_bool
               _enumext_store_internal_ref:
         }
       \__enumext_anskey_show_wrap_left:n { #1 }
```

Now we start processing the $[\langle key = val \rangle]$ passed to the command to build our \item in the variable \l__enumext_store_anskey_arg_tl which we will "store" in the sequence. First we clear the variable \l__enumext_store_anskey_arg_tl and process the $\langle keys \rangle$, if the break-col key is present and the command is running under enumext (not in enumext*) we will add \columnbreak and then \item.

```
\tl_clear:N \l__enumext_store_anskey_arg_tl
       \bool_lazy_and:nnT
2642
         { \bool_if_p:N \l__enumext_store_columns_break_bool }
2643
         { \bool_not_p:n { \l__enumext_starred_bool } }
2644
2645
           \tl_put_left:Nn \l__enumext_store_anskey_arg_tl { \columnbreak }
       \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { \item }
```

If the item-join key is present and the command is running under enumext* we will add $(\langle number \rangle)$ to $\verb|\lower| l=enumext_store_anskey_arg_tl|.$

```
\bool_lazy_and:nnT
2649
         { \bool_not_p:n { \l__enumext_starred_bool } }
2650
         { \int_compare_p:nNn { \l__enumext_store_item_join_int } > { 1 } }
2651
2652
           \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
                  \exp_not:V \l__enumext_store_item_join_int )
             7
```

©2024–2025 by Pablo González L

557

And now we will review the keys item-star, item-sym* and item-pos* and pass them to \l_enumext_-store_anskey_arg_tl along with the $\{\langle argument \rangle\}$ for \anskey or $\langle body \rangle$ for anskey*.

```
\bool_if:NTF \l__enumext_store_item_star_bool
         {
2659
           \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { * }
           \tl_if_empty:NF \l__enumext_store_item_symbol_tl
               \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
                    [ \exp_not:V \l__enumext_store_item_symbol_tl ]
           \dim_compare:nT
2668
               \l__enumext_store_item_symbol_sep_dim != \c_zero_dim
               \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
                 {
                   [ \exp_not:V \l__enumext_store_item_symbol_sep_dim ]
2677
           \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#1}
2678
         }
2679
         {
           \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#1}
         }
```

Finally we check if the save-ref key are active along with the hyperref package load, if both conditions are met, it will create the hyperlink with "symbol" set by mark-ref key and then store in sequence.

 $(\textit{End of definition for } \verb|__enumext_store_anskey_arg:n.)$

 $\verb|__enumext_anskey_show_wrap_arg:n|$

The function __enumext_anskey_show_wrap_arg:n "wraps" the $\{\langle argument \rangle\}$ passed to \anskey and the $\langle body \rangle$ for anskey* when using the wrap-ans and wrap-sep keys.

```

13.32 The environment anskey*

The original implementation of the anskey* environment used non-public functions from the scontents[?] package, which was not the best approach. Fortunately LTEX release 2025-06-01 implemented the new c-type argument in the tcmd[?], with which we can record the body of the environment in verbatim mode and, together with \scantokens do the work as the original implementation.

break-col First we add the same keys from the \anskey command along with the force-eol, write-env and item-join overwrite keys that were in the original implementation that used the scontents support package for item-star these.

```
item-sym* _{^{2828}} \keys_define:nn { enumext / anskey* }
\texttt{item-pos*} \quad {}_{\scriptscriptstyle{2829}} \quad \{

13.32.1 Internal functions for the environment

__enumext_anskey_env_safe_outer:
__enumext_anskey_env_safe_inner:
__enumext_store_anskey_env:n

The function __enumext_store_anskey_safe_outer: will return the appropriate messages when anskey* is executed outside the environment in which the save-anskey was activated or within the keyans, keyans* or keyanspic environments.

```
\cs_new_protected:Nn \__enumext_anskey_env_safe_outer:
       \bool_if:NF \l__enumext_store_active_bool
         {
2924
           \msg_error:nnn { enumext } { anskey-env-error } { anskey* }
2925
         }
2026
       \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
2927
         {
2928
            \msg_error:nnn { enumext } { anskey-env-wrong }{ keyans }
         }
2930
       \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
2931
         {
            \msg_error:nnn { enumext } { anskey-env-wrong } { keyans* }
         }
       \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
         {
           \msg_error:nnn { enumext } { anskey-env-wrong } { keyanspic }
2937
         }
2938
2939
```

The function __enumext_anskey_env_safe_inner: will first check if preceded by a not numbered \item or if it is in *math mode* returning the appropriate messages.

The __enumext_store_anskey_env:n function will first pass the argument c $\langle body \rangle$ to the variable \l__enumext_store_anskey_env_tl and replace the macro \obeyedline with ^^J and then execute the write-env and overwrite keys, check the state of the variable \l__enumext_anskey_env_force_eol_bool managed by the force-eol key and we will add \c__enumext_anskey_env_hidden_space_str if necessary. Finally we will use \exp_args:Ne on the __enumext_store_anskey_arg:n to expand the __enumext_scan_tokens:n function which rescans the \l__enumext_store_anskey_env_tl variable before processing it.

```
\cs_new_protected:Npn \__enumext_store_anskey_env:n #1
     {
2952
       \tl_set:Nn \l__enumext_store_anskey_env_tl {#1}
2953
       \RenewDocumentCommand \obeyedline { } { \iow_char:N \^^J }
2954
       \tl_replace_all:Nee \l__enumext_store_anskey_env_tl { \obeyedline } { \iow_char:N \^^J }
2955
       \__enumext_anskey_env_file_write:VV
2956
         \l__enumext_write_anskey_env_file_name_tl \l__enumext_store_anskey_env_tl
2957
       \bool_if:NF \l__enumext_anskey_env_force_eol_bool
2958
           \tl_put_right:Ne \l__enumext_store_anskey_env_tl
                   _enumext_anskey_env_hidden_space_str
         }
       \exp_args:Ne
         \ enumext store anskey arg:n
2967
                _enumext_scan_tokens:n { \l__enumext_store_anskey_env_tl }
           }
```

Since \obeyedline can be redefined by the user, for example to \mbox{}\par, it is necessary to redefine it to ^^J in order to use \tl_replace_all: Nee otherwise it returns an error.

```
(End\ of\ definition\ for\ \ \_enumext\_anskey\_env\_safe\_outer:\ ,\ \ \ \_enumext\_anskey\_env\_safe\_inner:\ ,\ and\ \ \ \ \ \\ anskey\_env:n.)
```

13.33 Executing check-ans system and write .log

__enumext_execute_after_env:

The __enumext_execute_after_env: function will first return the appropriate message for the end of the environment in which the save-ans key is being executed, then call the __enumext_item_answer_diff: function and then will write the values of the global variables used to the .log file. If the key check-ans is active it will execute the function __enumext_check_ans_show: and show the result in the terminal, otherwise it will execute the function __enumext_check_ans_log: and write the results in the .log file and finally we execute the function __enumext_reset_global_vars: returning the used variables to their original state.

```
2971 \cs_new_protected:Nn \__enumext_execute_after_env:
2972
       \int_compare:nNnT { \l__enumext_level_int } = { 0 }

2975
2976
                \__enumext_stop_save_ans_msg:
2977
                \__enumext_item_answer_diff:
2978
                \__enumext_log_global_vars:
                \__enumext_log_answer_vars:
                \bool_if:NTF \g__enumext_check_ans_key_bool
                        _enumext_check_ans_show:
                   }
2984
                       __enumext_check_ans_log: }
2985
              _enumext_reset_global_vars:
2987
          }
```

This function is passed to the function __enumext_after_env:nn for the environments enumext (§??) and enumext*

(§??) and it is executed only when the environments are not nested or at some level of these..

(End of definition for $\label{lem:enumext_execute_after_env:}$.)

13.34 Common functions for keyans, keyans* and keyanspic

13.34.1 Storing content in prop list

__enumext_keyans_addto_prop:n

The function __enumext_keyans_addto_prop:n will pass the the current $\langle label \rangle$ for \item* in keyans environment and the current $\langle label \rangle$ for \anspic* in keyanspic environment followed by the $\langle contents \rangle$ of the *optional argument* of both commands to the \l__enumext_store_current_label_tl variable, which will be stored to the *prop list* defined by the save-ans key using the function __enumext_store_addto_prop:V.

If the *optional argument* is present and the save-sep key is not empty, we save it.

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_keyans_addto_prop:n.)$

13.34.2 The save-ref key for keyans, keyans* and keyanspic

The "internal label and ref" system for the keyans, keyans* and keyanspic environments has slight differences with the one implemented for \anskey basically because in this environments the interest is in the current $\langle label \rangle$ for \item* and \anspic* with the $\langle contents \rangle$ of the optional argument. The mechanism defined here will allow to execute \ref{\lambda torus name: position}} and will return 1. (A).

__enumext_keyans_store_ref:
 __enumext_keyans_store_ref_aux_i:
 \ enumext keyans store ref aux ii:

The function __enumext_keyans_store_ref: handles the "internal label and ref" system used by the save-ref key for \item* and \anspic* commands. First we will create copies of the current $\langle labels \rangle$ and remove the dots "." from them, we do not want to get double dots in references.

```
\cs_new_protected:Nn \__enumext_keyans_store_ref:
3011
     {
       \bool_if:NT \l__enumext_store_ref_key_bool

```

13.35 Redefining \item and \makelabel in enumext

Redefining the \item command is not as simple as I thought. This command works in conjunction with the \makelabel command so I have to redefine both of them, in addition to this, we will have to use a couple of global variables to pass the values from one command to the other.

When *labeling* PDF is active \makelabel is redefined as \hss #1 and the only way to get the align key to work correctly is to redefine \makelabel using \makebox. The best way to implement this is to use the conditional command \IfDocumentMetadataTF to force this redefinition and the dedicated mode-box key to manually activate it by the user.

The \item and \item[$\langle custom \rangle$] commands work in the usual way on enumext and we will add \item*, \item*[$\langle symbol \rangle$] and \item*[$\langle symbol \rangle$][$\langle offset \rangle$].

__enumext_default_item:n

First we will see if the *optional argument* is present, if it is NOT present we will check the state of the variable \l__enumext_check_answers_bool set by the key no-store, set the boolean variable \l__enumext_-wrap_label_X_bool to "true" for the key wrap-label and execute __enumext_item_std:w and the key itemindent, otherwise we will check the state of the boolean variable \l__enumext_wrap_label_opt_-X_bool set by the key wrap-label* and execute __enumext_item_std:w with the *optional argument* and the key itemindent.

```
3211 \cs_new_protected:Npn \__enumext_default_item:n #1
3212 {
3213 \tl_if_novalue:nTF {#1}
3214 {

13.36 Setting item-sym* and item-pos* keys

In order to have a cleaner implementation of $\forall tem^*$ for the enumext and enumext* environments it is best to define a couple of keys that allow us to control and set by default the $\langle symbol \rangle$ and its $\langle offset \rangle$.

```
item-sym*
           Define and set item-sym* and item-pos* keys for enumext and enumext*.
item-pos*
           3332 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
           3334
                  \keys_define:nn { enumext / #1 }
                    {
                       item-sym* .tl_set:c = { l__enumext_item_symbol_#2_tl },
                       item-sym* .value_required:n = true,
                       item-sym* .initial:n = {\textborn},
           3338
                       item-pos* .dim_set:c = { l__enumext_item_symbol_sep_#2_dim },
           3339
                       item-pos* .value_required:n = true,
           3340
                     }
           3341
           3342
              \clist_map_inline:nn
           3343
                  {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {enumext*}{vii}
           3346
                { \__enumext_tmp:nn #1 }
           (End of definition for item-sym* and item-pos*.)
```

13.37 Handling unknown keys

At this point in the code I already know that I will NOT add more $\langle keys \rangle$ for and since I have already been quite *paranoid and restrictive* with the definitions of environments and commands, the only thing left to do is do it with the $\langle keys \rangle$ (you have to be consistent in life).

© Well, the paragraph above is not so real, after all I had to add more $\langle keys \rangle$ than I had planned, not everything turns out the way one thinks in life.

13.37.1 Handling unknown keys for keyans, keyans* and keyanspic

unknown
__enumext_keyans_unknown_keys:n
_enumext_keyans_unknown_keys:nn

Define and set unknown key for keyans, keyans* and keyanspic environments. Here it is necessary to set \l_enumext_envir_name_tl in case an unknown key is passed using \setenumext.

Internal functions for handling unknown key.

13.38 Redefining \item and \makelabel in keyans

The \item and \item[$\langle custom \rangle$] commands work in the usual way in keyans, but the \item* and \item*[$\langle content \rangle$] commands store the current $\langle label \rangle$ next to the $\langle content \rangle$ if it is present in the sequence and prop list defined by save-ans key.

__enumext_keyans_default_item:n

The function __enumext_keyans_default_item:n executes the original behavior of the \item along with the keys wrap-label, wrap-label* and itemindent.

```
3413 \cs_new_protected:Npn \__enumext_keyans_default_item:n #1
3414 {
```

©2024-2025 by Pablo González L

```
\tl_if_novalue:nTF { #1 }
         {
            \bool_set_true:N \l__enumext_wrap_label_v_bool
3417
              _enumext_item_std:w \tl_use:N \l__enumext_fake_item_indent_v_tl
3418
         }
         {
3420
            \bool_set_eq:NN \l__enumext_wrap_label_v_bool \l__enumext_wrap_label_opt_v_bool
3421
              _enumext_item_std:w [#1] \tl_use:N \l__enumext_fake_item_indent_v_tl
3422
         }
3423
3424
```

\ enumext keyans starred item:n

The function __enumext_keyans_starred_item:n will take as argument #1 the optional argument [$\langle content \rangle$] passed to \item* and save it via the __enumext_keyans_save_item_opt:n function, then activate the wrap-label key, execute \item using __enumext_item_std:w, the itemindent key and print the optional argument using the __enumext_keyans_show_item_opt: function handled by the wrap-opt key.

```
3425 \cs_new_protected:Npn \__enumext_keyans_starred_item:n #1
3426 {
3427 \__enumext_keyans_save_item_opt:n { #1 }
3428 \bool_set_true:N \l__enumext_wrap_label_v_bool
3429 \__enumext_item_std:w \tl_use:N \l__enumext_fake_item_indent_v_tl
3430 \__enumext_keyans_show_item_opt:
```

Now *store* the current $\langle label \rangle$ first in the *prop list* (including the *optional argument*), run the internal "label and ref" system if the save-ref key is active, then *store* in the *sequence* and finally increments \g_enumext_-check_starred_cmd_int for internal check system.

```
3431  \__enumext_keyans_addto_prop:n { #1 }
3432  \__enumext_keyans_store_ref:
3433  \__enumext_keyans_addto_seq:n { #1 }
3434  \int_gincr:N \g__enumext_check_starred_cmd_int
3435 }
```

(End of definition for __enumext_keyans_starred_item:n.)

13.39 Second argument of the lists

At this point in the code we have already programmed most of the tools needed to create a *custom* list environment, remember that the __enumext_start_list:nn function takes two arguments, we have the "first" one ready, the "second" one we will define for all levels of the enumext environment, the keyans environment and the enumext* and keyans* environments.

Here we will implement the __enumext_list_arg_two_X: function, which will be responsible for setting all the list parameters, the counter, the redefinition of \item, \makelabel along with the keys ref, itemindent and show-length.

In the functions __enumext_list_arg_two_X: we will implement the "counter" for the environments, but we do NOT set the "start value" for it to be compatible with tagged PDF that should be done later.

13.39.1 Calculation of \leftmargin and \itemindent

Consider the figure ?? where the default margins (on the left) of a list are represented.

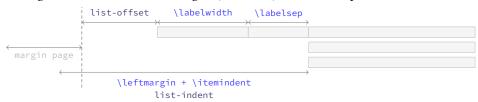

Figure 9: Representation of standard horizontal lengths in list environment.

The idea is to have control over these margins so that our list does not overlap the left margin of the page. The key relationship is that the "right edge" of the \labelsep equals the "right edge" of the \itemindent, so that the left edge of the "label box" is at \left\(\text{leftmargin+\itemindent} \) minus \label\(\text{labelsep}. \) Thus, the handling of the margins by the package will be as shown in the figure ??.

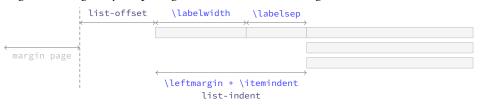

Figure 10: Representation of horizontal lengths concept in list in enumext.

Where the default values will look like in the figure ??.

Figure 11: Default horizontal lengths in enumext.

__enumext_calc_hspace:NNNNNNN
\ enumext calc hspace:cccccc

The function __enumext_calc_hspace: NNNNNNN takes seven arguments to be able to determine horizontal spaces for all list environment:

```
#1: \l__enumext_labelwidth_X_dim #2: \l__enumext_labelsep_X_dim
#3: \l__enumext_listoffset_X_dim #4: \l__enumext_leftmargin_tmp_X_dim
#5: \l__enumext_leftmargin_X_dim #6: \l__enumext_itemindent_X_dim
#7: \l__enumext_leftmargin_tmp_X_bool
```

And returns the "adjusted" values of \leftmargin and \itemindent.

```
\cs_new_protected:Npn \__enumext_calc_hspace:NNNNNNN #1 #2 #3 #4 #5 #6 #7
     {
3517
       \dim_compare:nNnT { #1 } < { \c_zero_dim }</pre>
3518
          {
3519
            \msg_warning:nnnV { enumext } { width-non-positive }{ labelwidth }{ #1 }
3520
            \dim_set:Nn #1 { \dim_abs:n { #1 } }
3521
         }
3522
       \dim_compare:nNnT { #2 } < { \c_zero_dim }</pre>
3523
3524
            \msg_warning:nnnV { enumext } { width-negative }{ labelsep }{ #2 }
3525
            \dim_set:Nn #2 { \dim_abs:n { #2 } }
          }
```

If no value has been passed to the labelwidth and labelsep keys we set the default values for \l_- enumext_leftmargin_tmp_X_dim.

```
528 \bool_if:NF #7 { \dim_set:Nn #4 { #1 + #2} }
```

We now analyze the cases and set the values for \leftmargin and \itemindent.

```

We will calculate the *vertical spacing* settings for the multicols environment using the function __enumext_-multi_addvspace:, apply our "*vertical adjust spacing*", then start the multicols environment.

```
bool_if:cF { l__enumext_minipage_active_ \__enumext_level: _bool }

{

skip_zero:N \multicolsep

__enumext_multi_addvspace:
}

raggedcolumns

begin{multicols}{ \int_use:c { l__enumext_columns_ \__enumext_level: _int } }
}

}

}
```

(End of definition for __enumext_multicols_start:.)

__enumext_multicols_stop:

The function __enumext_multicols_stop: will stop the multicols environment and apply our "vertical adjust" spacing. For compatibility with tagged PDF, the closing of the list environment is executed here along with __enumext_stop_store_level:.

```
3721 \cs_new_protected:Nn \__enumext_multicols_stop:
       \int compare:nNnTF
         { \int_use:c { l__enumext_columns_ \__enumext_level: _int } } > { 1 }
3724
            \__enumext_stop_list:
3726
            \__enumext_stop_store_level:
3727
           \end{multicols}
3728
           \__enumext_unskip_unkern:
            \__enumext_unskip_unkern:
           \par\addvspace{ \skip_use:c { l__enumext_multicols_below_ \__enumext_level: _skip } }
         }
         {
            \ enumext stop list:
3734
            \__enumext_stop_store_level:
         }
3736
3737
```

(End of definition for __enumext_multicols_stop:.)

__enumext_before_list:

The function __enumext_before_list: first calls the function __enumext_vspace_above: used by the keys above and above*, then calls the function __enumext_before_args_exec: used by the key before* and finally execute the function __enumext_check_ans_active: for the check answer mechanism.

```
3738 \cs_new_protected:Nn \__enumext_before_list:
3739 {
3740 \__enumext_vspace_above:
3741 \__enumext_before_args_exec:
3742 \__enumext_check_ans_active:
```

When the mini-env key is active it will set the value of the \l__enumext_minipage_right_X_dim to be the width of the __enumext_minipage environment on the "right side", using this value together with the value of the \l__enumext_minipage_hsep_X_dim set by the mini-sep key, the value of \l__enumext_minipage_left_X_dim will be set, which will be the width of __enumext_minipage environment on the "left side", always having a current \linewidth as maximum width between them.

```
\dim_compare:nNnT
```

```
{ \dim_use:c { l__enumext_minipage_right_ \__enumext_level: _dim } } > { \c_zero_dim }

{

\dim_set:cn { l__enumext_minipage_left_ \__enumext_level: _dim }

{

\linewidth

- \dim_use:c { l__enumext_minipage_right_ \__enumext_level: _dim }

- \dim_use:c { l__enumext_minipage_right_ \__enumext_level: _dim }

}

\dim_use:c { l__enumext_minipage_hsep_ \__enumext_level: _dim }

}
```

The boolean variable \l__enumext_minipage_active_X_bool will be activated and the integer variable \g__enumext_minipage_stat_int used by the \miniright command will be incremented, then the function __enumext_minipage_add_space: is called and the __enumext_mini_page environment on the "left side" will be initialized followed by the "vertical spacing" applied to preserve the "baseline" between the left and right side environments. After these actions, the function __enumext_multicols_start: is called to handle the multicols environment.

```
bool_set_true:c { l__enumext_minipage_active_ \__enumext_level: _bool }

int_gincr:N \g__enumext_minipage_stat_int

\__enumext_minipage_add_space:

inoindent

\__enumext_mini_page{ \dim_use:c { l__enumext_minipage_left_ \__enumext_level: _dim } }

\__enumext_multicols_start:
}
```

(End of definition for __enumext_before_list:.)

__enumext_second_part:

The function __enumext_second_part: first check the state of the boolean variable \l__enumext_minipage_active_X_bool, if it is "true" a small test will be executed to check if we have omitted the use of \miniright (the __enumext_mini_page environment has not been closed), then close __enumext_mini_page and add the adjusted vertical space \l__enumext_minipage_after_skip, otherwise we will close the multicols environment.

```
3760 \cs_new_protected:Nn \__enumext_second_part:
       \bool_if:cTF { l__enumext_minipage_active_ \__enumext_level: _bool }
            \int_compare:nNnT { \g__enumext_minipage_stat_int } = { 1 }
3764
              {
3765
                \msg_warning:nn { enumext } { missing-miniright }
3766
                \miniright
3767
3768
            \int_gzero:N \g__enumext_minipage_stat_int
3769
            \__enumext_unskip_unkern: % remove topsep + [partopsep]
3770
            \end__enumext_mini_page
3771
         }
         {
              _enumext_multicols_stop:
```

Now we will execute the functions __enumext_after_stop_list: used by the key after, __enumext_-check_ans_key_hook: used by the key check-ans, __enumext_vspace_below: used by the keys below and below*. Finally set \l__enumext_standar_bool to false and call the function __enumext_resume_-save_counter: used by the series, resume and resume* keys.

```
3776 \__enumext_after_stop_list:
3777 \__enumext_check_ans_key_hook:
3778 \__enumext_vspace_below:
3779 \bool_set_false:N \l__enumext_standar_bool
3780 \__enumext_resume_save_counter:
3781 }
```

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_second_part:.)$

__enumext_set_item_width:

The function __enumext_set_item_width: will set the value of \itemwidth taking into account the value established by the list-offset key for each level of the environment.

(End of definition for __enumext_set_item_width:.)

__enumext_start_counter:

For compatibility with tagged PDF and since we are using legacy code for the implementation, we must set the initial value of the counters after the second argument to the list environment and before the first execution of \item , i.e. \begin{list}{\langle arg\ one \rangle}{\langle arg\ two \rangle}\

This is described in processing order of legacysetupcode in the block templates and we will apply the workaround provided by Frank Mittelbach.

(End of definition for __enumext_start_counter:.)

enumext Now create the enumext environment based on list environment by levels.

```
3803 \NewDocumentEnvironment{enumext}{ 0{} }
     {
3804
        \__enumext_safe_exec:
3805
        \__enumext_parse_keys:n {#1}
        \__enumext_before_list:
3807
        \__enumext_start_store_level:
        \__enumext_start_list:nn
          { \tl_use:c { l__enumext_label_ \__enumext_level: _tl } }
          {
            \use:c { __enumext_list_arg_two_ \__enumext_level: : }
3812
            \__enumext_before_keys_exec:
3813
         }
3814
       \__enumext_start_counter:
3815
        \__enumext_set_item_width:
3816
        \__enumext_after_args_exec:
3817
       \__enumext_second_part:
3820
3821
     }
```

(End of definition for enumext. This function is documented on page ??.)

As we don't want our check to be executed check-ans by levels but on the complete list, we will take it out of the enumext environment using the "hook" function __enumext_after_env:nn.

```
3822 \__enumext_after_env:nn {enumext}
3823 {
3824 \__enumext_execute_after_env:
3825 }
```

13.41 The environment keyans

The environment keyans also based on lists. The main differences with the enumext environment are the *nesting* and the way the *answers* (choice) will be stored and checked, this environment is intended exclusively for "*multiple choice questions*".

_enumext_keyans_safe_exec:

The keyans environment will only be available if the save-ans key is active and can only be used at the "first level" within the enumext environment. We do not want the environment to be nested, so we will set a maximum at this point. If the conditions are not met, an error message will be returned.

```
\__enumext_keyans_name_and_start:
                                                                           % Set false for interfering with enumext nested in keyans (yes, its possible and crayze)
                                                                           \bool_set_false:N \l__enumext_store_active_bool
                                                                           \int_compare:nNnT { \l__enumext_keyans_level_int } > { 1 }

13.42 Tagging PDF support for non-standart list environments

The LTEX release 2022-06-01 brings automatic support for tagged PDF in several aspects, including the standard list environments and the list environment. Unfortunately non-standard list environments like keyanspic or the horizontal list environments enumext* and keyans* are not structured in a nice way, i.e. the expected result in the PDF file is the expected one, but the underlying structure is not correct. In simple terms, for tagged PDF a list environment is a list environment, no matter what it looks like in the PDF file.

To maintain a correct list structure when \DocumentMetadata is active, it is necessary to do some things manually using tagpdf[?] and ltsockets[?]. This implementation is an adaptation of my answer thanks to Ulrike Fischer's comments in How can I modify my \item redefinition to be compatible with tagging-pdf.

13.42.1 Socket for tagging support in enumext* and keyans*

start-list-tags We will first define the necessary sockets and their behavior for enumext* and keyans*.

stop-start-tags agei \socket_new:nn {tagsupport/_enumext/starred}{ 1 }

stop-list-tags agei \socket_new_plug:nnn {tagsupport/_enumext/starred} {start-list-tags}

\tag_mc_begin_pop:n {}

\tag_suspend:n {#1}

3984

3985 3986

```
enumext start list tag:n 3963
                                     \tag_resume:n {#1}
    \__enumext_stop_start_list_tag: 3964

4059
          \socket_use:n {tagsupport/__enumext/keyanspic}
        }
```

(End of definition for start-list-tags and others.)

13.43 The environment keyanspic and \anspic

The keyanspic environment is a list based environment that uses the same configuration for "spacing" and $\langle label \rangle$ as the keyans environment, but it does not use \item. The $\langle contents \rangle$ are passed to the environment by means of the \anspic command as replacement for \item command and placed inside minipage environments, with the \(\lambda \lambda e l \) centered "above" or "below", adjusting widths and position according to the options passed to the environment.

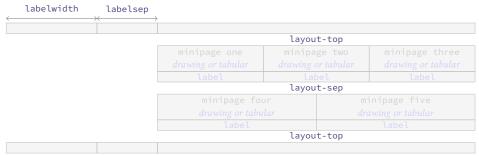

Figure 12: Representation of the keyanspic spacing in enumext.

In order for the keyanspic environment and the \anspic command to work correctly, we need to set and export some variables in the first part of the environment definition and pass them to \anspic which is executed in the second part of the environment. This implementation is adapted from the answer given by Enrico Gregorio (@egreg) in How to process the body of an environment and divide it by a \macro?.

13.43.1 The environment keyanspic

label-pos

label-sep

lavout-stv

First we define the key that allows us to process the position of the $\langle label \rangle$ centered "above" or "below" which will be label-pos, the vertical separation of these from drawing or tabular will be handled with the key label-sep. The "layout style" will be handled with the key layout-sty will take two values separated by comma $\{\langle n^\circ upper, n^\circ lower \rangle\}$ and will determine the number of minipage environments in which all arguments of \anspic will be printed at the "upper" and "lower" within the environments separated by the value of the key layout-sep. The vertical space "top" and "bottom" of the environment will be handled with

```
layout-sep
layout-top
 mark-ans
 mark-pos
            the key layout-top.

__enumext_keyans_pic_safe_exec:
__enumext_keyans_pic_parse_keys:n
__enumext_keyans_pic_skip_abs:N
__enumext_keyans_pic_arg_two:

The function __enumext_keyans_pic_safe_exec: check the nested level position inside the enumext environment.

```
\cs_new_protected:Nn \__enumext_keyans_pic_safe_exec:
       \int_incr:N \l__enumext_keyans_pic_level_int
       \int_compare:nNnT { \l__enumext_keyans_pic_level_int } > { 1 }
4110
            \msg_error:nn { enumext } { keyanspic-nested }
4111
          }
4112
        \__enumext_keyans_name_and_start:
4113
4114
Parse [\langle key = val \rangle] for keyanspic environment.
   \cs_new_protected:Npn \__enumext_keyans_pic_parse_keys:n #1
       \tl_if_novalue:nF {#1}
         {
            \keys_set:nn { enumext / keyanspic } {#1}
4119
          }
4120
4121
```

The function __enumext_keyans_pic_skip_abs:N will return a positive value \parsep from keyans environment.

The __enumext_keyans_pic_arg_two: function will be used in the second argument of the list environment that defines the keyanspic environment, with this we will take the configuration of the "spaces" and the keys label, wrap-label, parsep and topsep from the keyans environment. The first thing we need to do is set the boolean variable \l__enumext_leftmargin_tmp_v_bool handled by the list-indent key to "false", then copy the definition of the second list argument from the keyans environment definition and make sure that \parsep does not have a negative value.

```
4129 \cs_new_protected:Npn \__enumext_keyans_pic_arg_two:
4130 {
4131 \bool_set_false:N \l__enumext_leftmargin_tmp_v_bool
4132 \__enumext_list_arg_two_v:
4133 \__enumext_keyans_pic_skip_abs:N \parsep
```

Now we increment the counter enumXv of the keyans environment and save the *total height* of the $\langle label \rangle$ in $\l_enumext_anspic_label_htdp_dim used by \anspic and we will adjust the values of \parsep only if the key label-pos is set to$ *below*.

```
\bool_if:NF \l__enumext_anspic_label_above_bool
4134
         {
4135
            \stepcounter { enumXv }
4136
            \hbox_set:Nn \l__enumext_anspic_label_box { \l__enumext_label_v_tl }
4137
            \dim_set:Nn \l__enumext_anspic_label_htdp_dim
4138
                \box_ht_plus_dp:N \l__enumext_anspic_label_box
            \skip_add:Nn \parsep
              {
                \l__enumext_anspic_label_htdp_dim
                + \box_dp:N \strutbox
4145
                  \l__enumext_anspic_label_sep_skip
4146
4147
4148
```

Finally we *adjust* the value of \leftmargin and \topsep then set \listparindent, \partopsep and \itemsep to zero so that the *horizontal* and *vertical* space is not affected.

```
dim_add:Nn \leftmargin { -\l__enumext_labelwidth_v_dim - \l__enumext_labelsep_v_dim }
dim_add:Nn \leftmargin { -\l__enumext_labelwidth_v_dim - \l__enumext_labelsep_v_dim }
dim_specific controlsep { 0.5\box_dp:N \strutbox }
dim_zero:N \listparindent \skip_zero:N \partopsep
displayed controlsep { 0.5\box_dp:N \strutbox }
dim_zero:N \partopsep { 0.5\box_dp:N \strutbox }
dim_z
```

(End of definition for $\ensuremath{\backslash}$ enumext_keyans_pic_safe_exec: and others.)

keyanspic Now we define the environment keyanspic. For compatibility with tagged PDF we must use the \begin{list} form and a lot of conditional code using \IfDocumentMetadataTF. We will first stop the code for automatic tagged PDF for list environments, redefine \item so that it cannot be used, and stop the code for automatic tagged PDF for the keyanspic environment.

```
^NewDocumentEnvironment{keyanspic}{ o }
4157
       \__enumext_keyans_pic_safe_exec:
       \__enumext_keyans_pic_parse_keys:n {#1}
       \begin{list} { } { \__enumext_keyans_pic_arg_two: }
4160
       \IfDocumentMetadataT
4161
4162
          {
            \tag_suspend:n {list}
4163
          }
4164
       \item[] \scan_stop:
4165
       \RenewDocumentCommand \item {}
            \msg_error:nn { enumext } { keyanspic-item-cmd }
          }
       \Int If Document Metadata T
          {
            \tag_resume:n {keyanspic}
4172
            \tag_tool:n {para/tagging=false}
4173
            \tag_suspend:n {keyanspic}
4174
          }
4175
4176
```

In the second part of the environment definition we will manually place our code for tagged PDF and execute the command \anspic using the __enumext_anspic_exec: function.

```
\IfDocumentMetadataT
4178
4179
          {
            \tag_resume:n {keyanspic}
4180
            \tag_mc_end_push:
4181
            \tag_struct_begin:n {tag=L,attribute=enumerate}
4182
         }
       \__enumext_anspic_exec:
       \IfDocumentMetadataT
            \tag_suspend:n {keyanspic}
4188
         }
       \end{list}
4189
       \IfDocumentMetadataT
4190
4191
            \tag_struct_end:n {tag=L}
4192
            \tag_mc_begin_pop:n {}
            \tag_struct_end:n {tag=L}
            \tag_mc_begin_pop:n {}
```

Finally we check if \anspic* has been used, set the counter enumXvi to zero and apply our "adjusted" vertical space bottom.

```
\__enumext_check_starred_cmd:n { anspic }
4197
       \setcounter { enumXvi } { 0 }
4198
       \bool_if:NTF \l__enumext_anspic_label_above_bool
4199
         {
4200
            \par\addvspace{ 0.5\box_dp:N \strutbox }
         }
         {
           \par
           \addvspace
              {
                \dim_eval:n
                  {
4208
                    \l__enumext_anspic_label_htdp_dim + \box_ht_plus_dp:N \strutbox
                      \l__enumext_anspic_label_sep_skip + \l__enumext_topsep_v_skip
4211
              }
         }
```

(End of definition for keyanspic. This function is documented on page ??.)

13.43.2 The command \anspic

The \anspic command take three arguments, the *starred versions* \anspic*[$\langle content \rangle$] *store* the current $\langle label \rangle$ next to the *optional argument* [$\langle content \rangle$] in the *sequence* and *prop list* defined by save-ans key. The third *mandatory argument* { $\langle drawing\ or\ tabular \rangle$ } is NOT *stored* in the *sequence* or *prop list*.

• One of the complications here to make the keyanspic environment compatible with tagged PDF is the position of (label), the \anspic command processes the arguments in order, where #1 and #2 correspond to (label) and #3 to the mandatory argument and puts all this inside a minipage environment. If #1 and #2, that is (label), is above #3 there are no problems with tagged PDF, but if #3 comes first the list created with tagged PDF will not be correct.

\anspi

__enumext_anspic_body_dim:n er
__enumext_anspic_label:nn ar
__enumext_anspic_label_pos:nnn __enumext_anspic_args:nnn __enumext_anspic_print:n __enumext_anspic_print:n __enumext_anspic_print:V _enumext_anspic_print:V \

We check that the command is active in the keyanspic environment only if the save-ans key is present, otherwise we return an error. The three arguments are handled by the function __enumext_anspic_args:nnn and stored in the sequence \l__enumext_anspic_args_seq which is processed by the keyanspic environment.

```
NewDocumentCommand \anspic { s o +m }
     {
        \bool_if:NF \l__enumext_store_active_bool
          {
            \msg_error:nnnn { enumext } { wrong-place }{ keyanspic }{ save-ans }
          }
        \int_compare:nNnT { \l__enumext_level_int } > { 1 }
4221
          {
4222
            \msg_error:nn { enumext } { keyanspic-wrong-level }
4223
          }
4224
        \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
4225
            \msg_error:nnnn { enumext } { command-wrong-place }{ anspic }{ keyans }
          }
        \seq_put_right:Nn \l__enumext_anspic_args_seq
4229
          {

4358 {
4359 \__enumext_anspic_print:V \l_enumext_anspic_layout_style_tl
4360 }
4360 }
4361 }
```

(End of definition for \anspic and others. This function is documented on page ??.)

13.44 The horizontal environments

Generating horizontal list environments is NOT as simple as standard LTEX list environments. The fundamental part of the code is adapted from the shortlst package to a more modern version using expl3. It is not possible to redefine \item and \makelabel using \RenewDocumentCommand as in the vertical non starred versions.

To achieve the *horizontal list environments* we will capture the \item command and the $\langle content \rangle$ of this in *horizontal box* using \makebox for the label and a minipage environment for the $\langle content \rangle$ passed to \item, we will also add the *optional argument* ($\langle number \rangle$) to \item to be able to *join columns* horizontally, in simple terms, we want \item to behave in the same way as in the enumext environment but adding an *first optional argument* ($\langle number \rangle$).

A side effect is the limitation of using \item in this way without using \RenewDocumentCommand, which loses the original definition and affects the standard list environments provided by ETEX and any environment defined using base list environment, including: itemize, enumerate, description, quote, quotation, verse, center, flushleft, flushright, verbatim, tabbing, trivlist, list and all environments created with \newtheorem.

One way to get around this is to use something like:

```
\AddToHook{env/enumerate/before}{recover original \item definition}
```

inside minipage, but in my partial tests this does not have the desired effect and the vertical and horizontal spacing is distorted. For now this will remain as a limitation and I will see if it is feasible to implement it in the future.

For compatibility with the tagged PDF we close the environments according to the presence or not of the mini-env key.

__enumext_starred_joined_item_vii:n
__enumext_starred_joined_item_viii:n

The functions __enumext_starred_joined_item_vii:n and __enumext_starred_joined_item_viii:n will set the *width* of the box in which the $\langle content \rangle$ passed to \item($\langle columns \rangle$) will be stored together with the value of \itemwidth for the enumext* environment.

13.44.3 Functions for mini-env, mini-right and mini-right* keys

__enumext_start_mini_vii:
\ enumext stop mini vii:

The implementation of the mini-env key support is almost identical to the one used in the enumext and keyans environments, the difference is that the __enumext_mini_page environment on the "right side" is executed "after" closing the environment, so it is necessary to make a global copy of the variable \l_-enumext_minipage_right_vii_dim in the variable \g__enumext_minipage_right_vii_dim.

```
4522 \cs_new_protected:Nn \__enumext_start_mini_vii:
4523
       \dim_compare:nNnT { \l__enumext_minipage_right_vii_dim } > { \c_zero_dim }
4524
         {
4525
            \dim_set:Nn \l__enumext_minipage_left_vii_dim
4526
4527
                \linewidth
                - \l__enumext_minipage_right_vii_dim
                  \l__enumext_minipage_hsep_vii_dim
            \bool_set_true:N \l__enumext_minipage_active_vii_bool
            \dim gset eq:NN
4533
              \g__enumext_minipage_right_vii_dim
              \l__enumext_minipage_right_vii_dim
4535
            \__enumext_mini_addvspace_vii:
4536
            \nointerlineskip\noindent
4537
            \__enumext_mini_page{    \l__enumext_minipage_left_vii_dim    }
4538
         }
4539
```

The function __enumext_stop_mini_vii: closes the __enumext_mini_page environment on the "left side", applies \hfill and set the variable \g__enumext_minipage_active_vii_bool to "true" which will be used in the function __enumext_after_env:nn to execute the minipage on the "right side". At this point we will execute the __enumext_stop_list: and __enumext_stop_store_level_vii: functions stopping the list environment and the level saving mechanism for storage in sequence of the \anskey command and anskey* environment. This function is passed to the __enumext_after_list_vii: function in the second part of the enumext* environment definition (§??).

```

(End of definition for __enumext_start_mini_viii: and __enumext_stop_mini_viii:.)

13.45 The environment enumext*

enumext* First we will generate the environment and we will give a temporary definition to __enumext_stop_-item_tmp_vii: equal to __enumext_first_item_tmp_vii: and next to \item equal to __enumext_-start_item_tmp_vii: which we will redefine later. Unlike the implementation used by the shortlst package, we will not set the values of \rightskip and \@rightskip equal to \@flushglue whose value is 0.0pt plus 1.0 fil, in the tests I have performed this fails in some circumstances and different results are obtained when using pdfTeX and LuaTeX.

```

```

__enumext_fake_make_label_vii:n

The __enumext_fake_make_label_vii:n function will be in charge of handling our definition of \item. First we increment the counter enumXvii for the enumerated items and activate support for the *check answers* mechanism, followed by support for \item*[$\langle symbol \rangle$][$\langle offset \rangle$] if present, then the wrap-label and wrap-label* keys which we execute using \makebox whose width will be given by the labelwidth key and position by the align key, inside the argument of this we will execute the font key together with the function defined by the wrap-label or wrap-label* keys. Finally we execute the labelsep key applying a \skip_horizontal:N and \ignorespaces.

◆ For compatibility with tagged PDF and hyperref when an environment enumext is nested in enumext* and the key save-ans is not active need setting the \ifehyper@item switch to "true". The explanation for this is given by the master Heiko Oberdiek on \refstepcounter{enumi} twice (or more) creates destination with the same identifier. This patch is only needed if you are running pdflatex and not if you are running lualatex

(End of definition for $__$ enumext $_$ fake $_$ make $_$ label $_$ vii:n.)

13.45.2 Real definition of \item in enumext*

The functions __enumext_start_item_vii:w and __enumext_stop_item_vii: executing the true definition of \item inside the enumext* environment, unlike the implementation in shortlst we will NOT use an extra group and the plain form of the lrbox environment.

__enumext_start_item_vii:w
__enumext_stop_item_vii:

The first thing we will do is set the value of __enumext_stop_item_tmp_vii: equal to __enumext_stop_item_vii: which we will define later, after that we will start capturing \item and "item content" in a horizontal box where the width will be \itemwidth plus \labelsep.

```
4851 \cs_new_protected_nopar:Npn \__enumext_start_item_vii:w [#1]
4852 {
4853 \cs_set_eq:NN \__enumext_stop_item_tmp_vii: \__enumext_stop_item_vii:
4854 \hbox_set_to_wd:Nnw \l__enumext_item_text_vii_box
4855 {
4856 \l__enumext_joined_width_vii_dim
4857 + \l__enumext_labelwidth_vii_dim
4858 + \l__enumext_labelsep_vii_dim
4859 }
```

Redefine the \footnote command.

__enumext_renew_footnote_starred:

Now we insert our sockets for tagging PDF support and run \item.

```
4861 \__enumext_start_list_tag:n {enumext*}
4862 \__enumext_fake_make_label_vii:n {#1}
4863 \__enumext_stop_start_list_tag:
```

Finally we open the minipage environment, capture the "item content", make \parindent take the value of the key listparindent and \parskip take the value of the key parsep, then execute the keys itemindent and first.

• Here the use of \unskip and \skip_horizontal:n with the value of listparindent is necessary, otherwise an unwanted space is created when using \item[$\langle opt \rangle$] and the value passed to the key itemindent is incremented.

```
\_enumext_minipage:w [ t ]{ \l_enumext_joined_width_vii_dim }
\dim_set_eq:NN \parrindent \l_enumext_listparrindent_vii_dim
\skip_set_eq:NN \parskip \l_enumext_parsep_vii_skip
\_enumext_unskip_unkern:
\_enumext_unskip_unkern:
\skip_horizontal:n { -\l_enumext_listparrindent_vii_dim } \ignorespaces
\tl_use:N \l_enumext_fake_item_indent_vii_tl
\tl_use:N \l_enumext_after_list_args_vii_tl
```

The __enumext_stop_item_vii: function will finish the fetching \item and "item content" by closing the minipage environment, the sockets for tagging PDF and the horizontal box.

```

4976 \__enumext_vspace_below_viii:
4977 }
```

(End of definition for $_=$ enumext_after_list_viii:.)

 $(End\ of\ definition\ for\ _enumext_before_list_viii:.)$

13.46.1 The command \item in keyans*

The idea here is to make the \item command behave in the same way as in the keyans environment with the difference of the *optional argument* ($\langle number \rangle$) which works in the same way as in the enumext* environment. In simple terms we want to store the $\langle label \rangle$ next to the $\lceil \langle content \rangle \rceil$ if it is present in the *sequence* and *prop list* defined by save-ans key for \item*, \item*[$\langle content \rangle \rceil$, \item($\langle number \rangle$)* and \item($\langle number \rangle$)* and \item($\langle number \rangle$)* [$\langle content \rangle \rceil$] commands.

__enumext_first_item_tmp_viii:

The __enumext_first_item_tmp_viii: function will remove horizontal space equal to \labelwidth plus \labelsep to the left of the "first" \item in the environment at the point of execution of this function, where it is equal to the __enumext_stop_item_tmp_viii: function inside the environment body definition.

(End of definition for __enumext_first_item_tmp_viii:.)

__enumext_start_item_tmp_viii:
__enumext_item_peek_args_viii:
__enumext_joined_item_viii:w
__enumext_standar_item_viii:w

First we will call the function __enumext_stop_item_tmp_viii: that we will redefine later, we will increment the value of \l__enumext_item_column_pos_viii_int that will count the item's by rows and the value of \g__enumext_item_count_all_viii_int that will count the total of item's in the environment. After that we will call the function __enumext_item_peek_args_viii: that will handle the arguments passed to \item.

```
4986 \cs_new_protected_nopar:Nn \__enumext_start_item_tmp_viii:
4987 {
4988 \__enumext_stop_item_tmp_viii:
4989 \int_incr:N \l__enumext_item_column_pos_viii_int
4990 \int_gincr:N \g__enumext_item_count_all_viii_int
4991 \__enumext_item_peek_args_viii:
4992 }
```

The function __enumext_item_peek_args_viii: will handle the \item($\langle number \rangle$). Look for the argument "(", if it is present we will call the function __enumext_joined_item_viii:w ($\langle number \rangle$), which is in charge of joining the item's in the same row, in case they are not present we will set the default value (1).

```
4993 \cs_new_protected:Nn \__enumext_item_peek_args_viii:
4994 {
4995 \peek_meaning:NTF (
4996 {\__enumext_joined_item_viii:w }
4997 {\__enumext_joined_item_viii:w (1) }
4998 }
```

The function __enumext_joined_item_viii:w will first call the function __enumext_starred_-joined_item_viii:n in charge of setting the *width* of the box that will store the content passed to \item. Then we will look for the argument "*", if it is present we will call the function __enumext_starred_-item_viii:w otherwise we will call the function __enumext_standar_item_viii:w.

The function __enumext_standar_item_viii:w will first look for the argument "[", if present it will set the state of the variable \l__enumext_wrap_label_opt_viii_bool equal to the state of the variable \l__enumext_wrap_label_opt_viii_bool handled by the key wrap-label* and finally execute the non-enumerated version \item[$\langle custom \rangle$] by means of the function __enumext_start_item_viii:w, otherwise we will set the value of the variable \l__enumext_wrap_label_viii_bool handled by the wrap-label key to true and set the switch \if@noitemarg to true to execute the enumerated version of \item by means of the function __enumext_start_item_viii:w [\l__enumext_label_viii_tl].

13.47 The command \getkeyans

\getkeyans

__enumext_getkeyans_aux:n
__enumext_getkeyans:nn

The \getkeyans command takes a *mandatory argument* of the form $\{\langle store\ name: position \rangle\}$. Retrieve a "single content" stored by \anskey, \anspic* and \item* and anskey* from prop list defined by save-anskey.

The internal function __enumext_getkeyans_aux:n is in charge of *splitting* the *mandatory argument* using ":". If ":" is omitted it will return an error.

```
5191 \cs_new_protected:Npn \__enumext_getkeyans_aux:n #1
5192 {
5193 \str_if_in:nnTF {#1} { : }
5194 {
5195 \use:e
5196 {
©2024-2025 by Pablo González L
```

The internal function __enumext_getkeyans:nn will check for the existence of the *prop list*, if it does not exist it will return an error message, then it will fetch the content specified by the *second argument* from *prop list*.

(End of definition for \getkeyans, __enumext_getkeyans_aux:n, and __enumext_getkeyans:nn. This function is documented on page ??.)

13.48 The command \printkeyans

The \printkeyans command prints "all stored content" in the sequence defined by the save-ans key. The first thing we will do is define a set of $\langle filtered\ keys \rangle$ with which we will control the options of the different nesting levels for the environment enumext and enumext* by storing their values in the list of tokens \l_enumext_print_keyans_X_tl.

The variable \l__enumext_print_keyans_starred_tl will have the default $\langle keys \rangle$ for \printkeyans* and will be set by \setenumext[$\langle print^* \rangle$] and the variable \l__enumext_print_keyans_vii_tl will have the default keys for the environment enumext* nested within the *sequence* and will be set by \setenumext[$\langle print, * \rangle$], the rest of the variables will be for the environment enumext and will be set by \setenumext[$\langle print, * \rangle$].

                                { \__enumext_filter_save_key:n {#1} }
5247
                                \l__enumext_print_keyans_vii_tl, % starred nested
```

```
print-* .initial:n = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt, rightmargin=0pt, listparindent=0pt, nosep, label=\arabic*., first=\small, font=\small },
```

The reason for storing \(\lambda eys \rangle \) in token lists using \keys_precompile: neN is because the keys are set via \setenumext but are later executed by running the command \printkeyans and they are not handled directly by its optional argument, except those related to the first opening level.

\printkeyans

__enumext_printkeyans:nnn

Create a user command to print "all stored content" in sequence for \anskey, anskey*, \item* and \anspic*. Within a group we will run our "precompiled keys" and then call the internal function __enumext_-printkeyans:nnn.

The internal function __enumext_printkeyans:nnn will check for the existence of the *sequence*, if it does not exist it will return an error message, then it will check if not empty.

If the starred argument '*' is present we will check that the environment enumext* is not saved in the sequence, then execute the variable \l__enumext_print_keyans_starred_tl that contains the default $\langle keys \rangle$ for the environment enumext*, we set \l__enumext_base_line_fix_bool and \l__enumext_print_keyans_star_bool to true for baseline correction, open the enumext* environment passing the optional argument and map the sequence, then set \l__enumext_base_line_fix_bool and \l__enumext_print_keyans_star_bool to false.

```

5285
```

Otherwise it will open the environment enumext passing the *optional argument* to the "first level" then map the *sequence*.

 $(\textit{End of definition for } \verb|\printkeyans| and \verb|\printkeyans| ... \textit{This function is documented on page \ref{eq:continuous}.})$

13.49 The command \setenumext

The command \setenumext will be in charge of managing the $\langle keys \rangle$ passed to all environments and to the \printkeyans command. We must take precautions with the enumext* environment and "first level" of the enumext environment so as not to capture $\langle keys \rangle$ that complicate us.

__enumext_filter_first_level:n
__enumext_filter_first_level_key:n
__enumext_filter_first_level_pair:nn

The function $_$ _enumext_filter_first_level:n will be in charge of filtering the $\langle keys \rangle$ passed to the environment enumext* and "first level" of the environment enumext.

The function $_$ enumext_filter_first_level_key:n will be responsible for filtering the $\langle keys \rangle$ that are passed "without value" by excluding the keys resume and resume*.

```
5307 \cs_new:Npn \__enumext_filter_first_level_key:n #1
5308 {
5309 \str_case:nnF {#1}
5310 {
5311 { resume } {}
5312 { resume* } {}
5313 }
5314 { , { \exp_not:n {#1} } }
5315 }
```

The function $_$ _enumext_filter_first_level_pair:nn will be responsible for filtering the $\langle keys \rangle$ that are passed "with value" by excluding the series, resume and save-ans keys.

 $(End \ of \ definition \ for \ _enumext_filter_first_level:n, \ _enumext_filter_first_level_key:n, \ and \ __enumext_filter_first_level_pair:nn.)$

Now define a "meta families" of $\langle keys \rangle$ to access from \setenumext.

```

                                                                                                                     page ??.)
                                                                                                                                                            The command \setenumextmeta
                                                                                                                       13.50
```

The command \setenumextmeta will be responsible for adding new "meta-keys" for the enumext and enumext* environments. The implementation code was given by Jonathan P. Spratte (@Skillmon) answer in Add .meta key to existing keys (l3keys).

\setenumextmeta First we will create a prop list \c_enumext_meta_paths_prop to handle the optional argument.

```
\c__enumext_meta_paths_prop
                             5401 \prop_const_from_keyval:Nn \c__enumext_meta_paths_prop
\__enumext_add_meta_key:nnn 5402
                                  {
\__enumext_def_meta_key:nnn 5403
                                     {enumext,1} = level-1,
                                     {enumext,2} = level-2,
\ enumext def meta key:Vnn 5404
                                     {enumext,3} = level-3,
                                     {enumext,4} = level-4,
                              ©2024-2025 by Pablo González L
```

```
{enumext*} = enumext*
5408
     }
```

Now we create the user command taking care that unknown cannot be passed as an argument.

```
\NewDocumentCommand \setenumextmeta { s O{enumext,1} m +m }
       \str_if_eq:eeTF { \tl_trim_spaces:n {#3} } { unknown }
5411
         { \msg_error:nn { enumext } { prohibited-unknown } }
5412
         {
5413
           \bool_if:nTF {#1}
5414
             {
5415
                \int_step_inline:nn { 4 }
                  { \__enumext_add_meta_key:nnn { enumext, ##1 } {#3} {#4} }
                \__enumext_add_meta_key:nnn { enumext* } {#3} {#4}
              { \__enumext_add_meta_key:nnn {#2} {#3} {#4} }
         }
5422
```

The internal functions __enumext_add_meta_key:nnn and __enumext_def_meta_key:nnn will check the optional argument and create the "meta-key".

```
\cs_new_protected:Npn \__enumext_add_meta_key:nnn #1
5424
       \tl_set:Nn \l__enumext_meta_path_tl {#1}

5438
         { \keys_if_exist_p:nn { enumext / enumext* } {#2} }
         { \msg_error:nnn { enumext } { already-defined } {#2} }
5440
5441
           \keys_define:nn { enumext / #1 }
5442
5443
              #2 .meta:n = \{ #3 \},
               #2 .value_forbidden:n = true
         }
_{\mbox{\scriptsize 5449}} \cs_generate_variant:Nn \__enumext_def_meta_key:nnn { V }
```

(End of definition for \setenumextmeta and others. This function is documented on page ??.)

The command \foreachkeyans

The command \foreachkeyans will execute a loop over the prop list and return its contents. The implementation code is adapted from the answer provided by Enrico Gregorio (@egreg) in Expand a .cs defined by key inside the function.

\foreachkeyans

We define a set of $\langle keys \rangle$ for command and we will save the default values of these in $\g_{enumext}$ foreach_default_keys_tl to avoid the use of group.

138/??
