enumext
ENUMERATE EXERCISE SHEETS

V2.0   2025-11-28*

©2024–2025 by Pablo González L†

Abstract

This package provides enumerated list environments compatible with *tagging* PDF for creating *"simple exercise sheets"* along with *"multiple choice questions"*, storing the *"answers"* to these in memory using `multicol` package.

Contents

Motivation and acknowledgments

Usually, it is enough to use the classic enumerate environment to generate *"simple exercise sheets"* or *"multiple choice questions"*, the basic idea behind enumext is to cover three points:

1. To have a simple interface to be able to write *"lists of exercises"* with *"answers"*.
2. To have a simple interface for writing *"multiple choice questions"*.
3. To have a simple interface for placing *"columns"* and *"drawings"* or *"tables"*.

This package would not be possible without Phelype Oleinik who has collaborated and adapted a large part of the code and all LaTeX team for their great work and to the different members of the TeX-SX community who have provided great answers and ideas. Here are notes on the main ones:

1. Answer given by Alan Munn in \topsep, \itemsep, \partopsep, \parsep - what do they each mean (and what about the bottom)?
2. Answer given by Enrico Gregorio in Understanding minipages - aligning at top
3. Answer given by Ulrich Diez in Different mechanics of hyperlink vs. hyperref
4. Answer given by Enrico Gregorio in Minipage and multicols, vertical alignment

---

License and Requirements

Permission is granted to copy, distribute and/or modify this software under the terms of the LaTeX Project Public License (lppl), version 1.3 or later (`https://www.latex-project.org/lppl.txt`). The software has the status "maintained".

The enumext package loads and requires `multicol`[3] package, need to have a modern TeX distribution such as TeX Live or MiKTeX. It has been tested with the standard classes provided by LaTeX: `book`, `report`, `article` and `letter` on `10pt`, `11pt` and `12pt`.

💣 The minimum requirement is LaTeX release 2025-11-01.

1 Introduction

In the LaTeX world there are many useful packages and classes for creating *"lists of exercises"*, *"worksheets"* or *"multiple choice questions"*, classes like `exam`[1] and packages like `xsim`[2] do the job perfectly, but they don't always fit the basic day to day needs.

In my work (and in the work of many teachers) it is common to use *"simple exercise sheets"* also known as *"informal lists of exercises"*, for example:

1. Factor $x^2 - 2x + 1$
2. Factor $3x + 3y + 3z$
3. True False
   (a) $\alpha > \delta$
   (b) LaTeX2e is cool?
4. Related to Linux

(a) You use Linux?
(b) Usually uses the package manager?
(c) Rate the following package and class
   i. `xsim-exam`
   ii. `xsim`
   iii. `exsheets`

Sometimes we are also interested in showing the *"answers"* along with the questions:

1. Factor $x^2 - 2x + 1$
   * $(x-1)^2$
2. Factor $3x + 3y + 3z$
   * $3(x+y+z)$
3. True False
   (a) $\alpha > \delta$
      * False
   (b) LaTeX2e is cool?
      * Very True!
4. Related to Linux

(a) You use Linux?
   * Yes
(b) Usually uses the package manager?
   * Yes, `dnf`
(c) Rate the following package and class
   i. `xsim-exam`
      * doesn't exist for now :(
   ii. `xsim`
      * very good
   iii. `exsheets`
      * obsolete

Or we are interested in referring to a specific question and its *"answer"*, for example:

The answer to 3.(b) is "Very True!" and the answer to 4.(c).ii is "very good".

Or we are interested in printing all the *"answers"*:

1. $(x-1)^2$ ※
2. $3(x+y+z)$ ※
3. (a) False ※
   (b) Very True! ※
4. (a) Yes ※

(b) Yes, `dnf` ※
(c) i. doesn't exist for now :(※
   ii. very good ※
   iii. obsolete ※

Another very common thing to use in my work is *"multiple choice questions"*, for example:
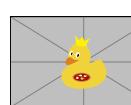

1. First type of questions
   A) value   C) value
   B) correct   D) value

2. Second type of questions
   I. $2\alpha + 2\delta = 90°$
   II. $\alpha = \delta$
   III. $\angle EDF = 45°$

   A) I only   D) I and III only
   B) II only   E) I, II, and III
   C) I and II only

★ 3. Third type of questions
   (1) $2\alpha + 2\delta = 90°$
   (2) $\angle EDF = 45°$

   A) value   D) value
   B) value   E) value
   C) value

4. Question with image and label below:

A)   B)   C)

D)   E)

5. Question with image on right side:

A) value
B) value
C) value
D) correct
E) value

Where we are interested in the ⟨*label*⟩ and a *"short note"* that we leave as an explanation, and then print them:

1. B) $x = 5$
2. D)
3. C) some note

4. E) A duck
5. D) "other note"

The enumext package was created and designed to meet these small requirements in the creation of *"simple worksheets"* and *"multiple choice questions"*.

These *"simple worksheets"* or *"multiple choice questions"* appear to be easy to obtain using a combination of the enumerate, minipage and multicols environments, but like many things, what *"looks simple"* is not so simple.

1.1 Description and usage

The enumext package defines enumerated environments using the list environment provided by LaTeX, but *"does not redefine"* any internal commands associated with it such as \list, \endlist or \item outside of the *"scope"* in which they are defined.

This package is NOT intended to replace the enumerate environment nor replace the powerful enumitem[6], the approach is intended to work without hindering either of them.

This package can be used with xelatex, lualatex, pdflatex and the classical latex»dvips»ps2pdf and is present in TeX Live and MiKTeX, use the package manager to install. For manual installation, download enumext.zip and unzip it, run luatex enumext.ins and move all files to appropriate locations, then run mktexlsr. To produce the documentation run arara enumext.dtx.

```
enumext.sty   »   TDS:tex/latex/enumext/
enumext.pdf   »   TDS:doc/latex/enumext/
README.md     »   TDS:doc/latex/enumext/
enumext.dtx   »   TDS:source/latex/enumext/
enumext.ins   »   TDS:source/latex/enumext/
```

The package is loaded in the usual way:

```
\usepackage{enumext}
```

1.2 The concept of left margin

There is a direct relationship between the parameters \leftmargin, \itemindent, \labelwidth and \labelsep plus an *"extra space"*, which makes it difficult to obtain the desired *horizontal spaces* in a list environment. Usually we don't want the list to go beyond the left margin of the page, but since these four values are related, that causes a problem.

The enumitem[6] package adds the \labelindent parameter to solve some of these problems. A simplified representation of this in the figure 1.

Figure 1: Representation of horizontal lengths in enumitem.

The enumext package does NOT provide a user interface to set the values for \leftmargin and \itemindent, instead it provides the keys list-offset and list-indent which internally set the values for \leftmargin and \itemindent. The concepts of \leftmargin and \itemindent are different in enumext. The figure 2 shows the visual representation of idea.
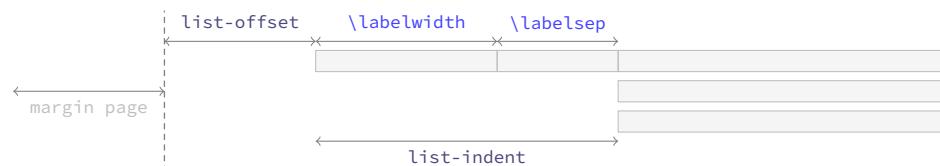

Figure 2: Representation of horizontal lengths concept in enumext.

In this way we reduce a *little* the amount of parameters we have to pass. With the default values of keys list-offset, list-indent, labelwidth and labelsep the lists will have the (usually) expected output for *"simple worksheets"*. The figure 3 shows the visual representation.
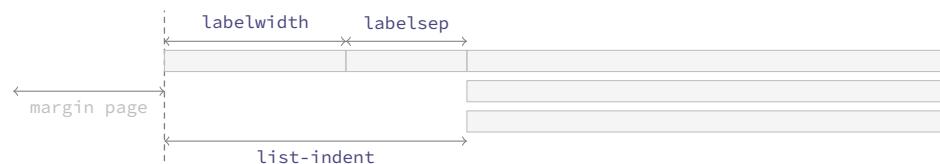

Figure 3: Default horizontal lengths list-offset=0pt, list-indent=\labelwidth+\labelsep in enumext.

1.3 User interface

The user interface consists of two main list environments `enumext` (vertical) and `enumext*` (horizontal), the environment `anskey*` and the command `\anskey` to *"store content"* and the environments `keyans`, `keyans*` and `keyanspic` for multiple choice. It also provides the commands `\getkeyans` to print individual *stored content*, `\printkeyans` to print all *stored content*, `\foreachkeyans` to print a range of *stored content*, `\miniright` for `minipage`, `\setenumext` to config `[⟨key = val⟩]`, `\setenumextmeta` to add a *"meta-key"* and `\resetenumext` to reset counters.

1.3.1 Public counters

The package enum**ext** uses the `enumXi`, `enumXii`, `enumXiii`, `enumXiv` counters for the *four* nesting levels of the `enumext` environment, the `enumXv` counter for the `keyans` environment, the `enumXvi` counter for the `keyanspic` environment, the counter `enumXvii` for `enumext*` environment and the counter `enumXviii` for `keyans*` environment.

🔵 If any package defines these *counters* or they are user-defined in the document, the package will return a *"fatal error"* and abort the load.

1.3.2 Public dimension

The package enum**ext** only provides a *single public dimension* `\itemwidth` and is intended for user convenience only and is NOT for internal use as such. The dimension `\itemwidth` is a *rigid length* and contains the *"width of the content"* of each `\item` regardless of `labelwidth` and `labelsep`.

🔵 If any package defines `\itemwidth` or the user defines `\itemwidth` in the document, the package will overwrite it without warning.

1.3.3 Support for multicol

The package provides direct support for using the `multicol`[3] package. This allows for a two-column output as shown in the figure 4.

Figure 4: Representation of the two column output for a nested level in `enumext` environment.

The *"non starred"* version of the `multicols` environment is always used together with the `\raggedcolumns` command and is controlled by `columns` and `columns-sep` keys. It can be used in all nesting levels of the environment `enumext` and the environment `keyans` and can together with the `mini-env` key. If you need to force a start a new column `\columnbreak` must be used (see §5.7).

🔵 The `\columnseprule` command is not available as a key and is set to *"zero"* for the inner levels and the `keyans` environment. If the value of this is set inside the document, it will affect *"all environments"* that use the `columns` key.

1.3.4 Support for `minipage`

The package provides direct support for `minipage` environment, this allows you to obtain an output like the one shown in figure 5.

Figure 5: Representation of the `mini-env` output for a nested level `enumext` environment.

The `minipage` environments on the *"left side"* and *"right side"* are always used with *"aligned on top"* `[t]`. It can be used in all nesting levels of the environment `enumext` and the environment `keyans` and is controlled by `mini-env` and `mini-sep` keys. In order to switch from the *"left"* side `minipage` environment to the *"right"* side one must use the command `\miniright` (see §5.8).

1.3.5 The `\label` and `\ref` system

This package provides a user interface like the `enumitem`[6] package to customize the references which is activated by the `ref` key (§5.1), the standard LaTeX `\label` and `\ref` commands work as usual. It also provides an *"internal reference"* system for the *"stored content"* by means of the key `save-ref` (§6.1.1) when the key `save-ans` is active (§6.1).

1.3.6 Support for `\footnote`

The `enumext*` and `keyans*` environments and the `mini-env` key use the `minipage` environment in their implementation but in a transparent way for the user, it is only used for typesetting. The implementation supports `\footnote` and is compatible with `hyperref` and works the same way as if used anywhere in the document.

Unfortunately, if `hyperref` is loaded and *tagged* PDF is not active, it will not produce the "links", the internal implementation uses `\footnotetext[⟨number⟩]` and `\footnotemark[⟨number⟩]{⟨text⟩}` and "links" for this are not supported by the `hyperref` package.

The best way to solve this if *tagged* PDF is NOT active is to use Jean-François Burnol's `footnotehyper`[9] package. It will support keeping the "links" if `hyperref` is loaded with the `hyperfootnotes=true` option (default). Load it is as follows:

```
\IfDocumentMetadataF
  {
    \usepackage{footnotehyper}
    \makesavenoteenv{enumext}
    \makesavenoteenv{enumext*}
  }
```

🏷 At the moment the `footnotehyper` package v1.1e (2021/08/13) is not compatible with *tagged* PDF.

2 The environments provided

The package enumext provides two main list environments, the *vertical* environment `enumext` and the *horizontal* environment `enumext*`.

enumext
enumext*

```
\begin{enumext}[⟨keyval list⟩]              \begin{enumext*}[⟨keyval list⟩]
  \item ⟨item content⟩                       \item ⟨item content⟩
  \item [⟨custom⟩] ⟨item content⟩            \item [⟨custom⟩] ⟨item content⟩
  \item*[⟨symbol⟩][⟨offset⟩] ⟨item content⟩  \item*[⟨symbol⟩][⟨offset⟩] ⟨item content⟩
\end{enumext}                               \end{enumext*}
```

2.1 The environment enumext

The `enumext` is an environment that works in the same way as the standard enumerate environment provided by LATEX, `\item` and `\item[⟨custom⟩]` commands work in the usual way. The environment can be nested with at most *"four levels"* and the options can be configured globally using `\setenumext` command and locally using `[⟨key = val⟩]` in the environment.

Example with `columns=2`

1. This text is in the first level.

   (a) This text is in the second level.

      i. This text is in the third level.

    A. This text is in the fourth level.

    X This text is in the first level.

   ★ 2. This text is in the first level.

2.2 The environment enumext*

The `enumext*` is a *horizontal list environment* similar to the shortenumerate or tasks environments provided by shortlst[16] and tasks[17] packages, `\item` and `\item[⟨custom⟩]` work as usual. The options can be configured globally using `\setenumext` command and locally using `[⟨key = val⟩]` in the environment.

Some considerations to take into account for this environment:

- The environment cannot be nested within itself or in the environment keyans*, but it can be nested within enumext and vice versa.
- Each *"item content"* in the environment is placed within a minipage environment whose *width* is stored in the dimension `\itemwidth` does NOT include labelwidth and labelsep, only the *width of the content.*
- You cannot have floating environments like figure or table or `\marginpar` but `\footnote` with hyperref is supported. If you want to activate links *"without"* *tagged* PDF active you must load footnotehyper and hyperref packages (see §1.3.6).
- You cannot have any standard list environments like itemize, enumerate, description, quote, quotation, verse, center, flushleft, flushright, verbatim, tabbing, trivlist, list and all environments created with `\newtheorem`.

Example with `columns=2`

1. This text is in the first level.

X This text is in the first level.

2. This text is in the first level.

★ 4. This text is in the first level.

2.3 The command \item*

\item*

```
\item*[⟨symbol⟩][⟨offset⟩]
```

The `\item*`, `\item*[⟨symbol⟩]` and `\item*[⟨symbol⟩][⟨offset⟩]` works like the numbered `\item`, but places a ⟨symbol⟩ to the *"left"* of the ⟨label⟩ separated from it by the ⟨offset⟩ set by the the *second optional argument.*

The *starred argument* '*' cannot be separated by spaces '␣' from the command, i.e. `\item*` and the *first optional argument* does NOT support *verbatim content*. It can be configured with the keys `item-sym*` and `item-pos*` locally in the environment or globally using `\setenumext` command (§3).

🎯 The behavior of `\item*` in the `enumext` and `enumext*` environments is NOT the same as in the `keyans` and `keyans*` environments.

2.3.1 Keys for `\item*`

item-sym* = {⟨*symbol*⟩}   default: *\textborn*

Sets the *symbol* to be displayed to the *"left"* of the box containing the current ⟨*label*⟩ set by `labelwidth` key for `\item*` in `enumext` and `enumext*`. The *symbol* can be in *text* or *math* mode, for example `item-sym*={$\star$}`.

item-pos* = {⟨*rigid length*⟩}   default: *by levels*

Sets the *offset* between the box containing the current ⟨*label*⟩ defined by `labelwidth` key and the ⟨*symbol*⟩ set by `item-sym*` key. The default values are set by `labelsep` key at each level. If positive values are passed, it will *offset to the left*; if negative values are passed it will *offset to the right*.

2.4 The command `\item` in `enumext*`

The `\item` command for the `enumext*` environment provides a *"first optional argument"* `\item(`⟨*columns*⟩`)` which *"joins items"* between columns. Let's consider the following examples adapted directly from the `tasks` package:

```
\begin{enumext*}[widest=10,columns=4]
  \item The first
  \item* The second
  \item The third
  \item The fourth
  \item(3)* The fifth item is way too long for this and needs three columns
  \item The sixth
  \item The seventh
  \item(2)[X] The eighth item is way too long for this and needs two columns
    (\the\itemwidth)
  \item The ninth
  \item[Z] The tenth (\the\itemwidth)
\end{enumext*}
```

1. The first ⋆ 2. The second 3. The third 4. The fourth

⋆ 5. The fifth item is way too long for this and needs three columns 6. The sixth

7. The seventh X The eighth item is way too long for this and needs 9. The ninth
two columns (196.17749pt)

Z The tenth (89.28171pt)

3 The command `\setenumext`

\setenumext

`\setenumext{`⟨*key = val*⟩`}`	`\setenumext[`⟨*keyans**⟩`]{`⟨*key = val*⟩`}`
`\setenumext[`⟨*enumext, level*⟩`]{`⟨*key = val*⟩`}`	`\setenumext[`⟨*print, level*⟩`]{`⟨*key = val*⟩`}`
`\setenumext[`⟨*enumext**⟩`]{`⟨*key = val*⟩`}`	`\setenumext[`⟨*print, **⟩`]{`⟨*key = val*⟩`}`
`\setenumext[`⟨*keyans*⟩`]{`⟨*key = val*⟩`}`	`\setenumext[`⟨*print**⟩`]{`⟨*key = val*⟩`}`

The command `\setenumext` sets the ⟨*keys*⟩ on a global basis for environments `enumext`, `enumext*`, `keyans`, `keyans*` and the `\printkeyans` command. It can be used both in the preamble and in the body of the document as many times as desired.

The ⟨*keys*⟩ set in the *optional argument* of environments and commands have the *highest precedence*, overriding both options passed by `\setenumext`. If the *optional argument* is not passed, the *first level* of the environment `enumext` will be taken by default.

🎯 For security reasons the keys `resume` *"with value"*, `resume*`, `reset`, `reset*`, `series` and `save-ans` they can NOT be set by this command and are ignored. The key `save-ans` that activate the *"storage system"* must be passed directly in the *optional argument* of the *"first level"* of the environment in which they are executed.

4 The command `\setenumextmeta`

\setenumextmeta

```
\setenumextmeta[⟨1⟩]{⟨key name⟩}{⟨key-one = val, key-two = val, ...⟩}
\setenumextmeta[⟨2⟩]{⟨key name⟩}{⟨key-one = val, key-two = val, ...⟩}
\setenumextmeta[⟨3⟩]{⟨key name⟩}{⟨key-one = val, key-two = val, ...⟩}
\setenumextmeta[⟨4⟩]{⟨key name⟩}{⟨key-one = val, key-two = val, ...⟩}
\setenumextmeta[⟨*⟩]{⟨key name⟩}{⟨key-one = val, key-two = val, ...⟩}
\setenumextmeta*{⟨key name⟩}{⟨key-one = val, key-two = val, ...⟩}
```

The command `\setenumextmeta` adds a new *"meta-key"* for the environments `enumext` and `enumext*`, the {⟨*key name*⟩} must be different from those defined by the package. The *optional argument* of the form `[1]`, `[2]`, `[3]`, `[4]` adds a new *"meta-key"* for levels 1, 2, 3 and 4 of the `enumext` environment, the form `[*]` adds a new *"meta-key"* for the `enumext*` environment. If it is run *without* the *optional argument*, it will add a new *"meta-key"* for the *"first level"* of the `enumext` environment.

The *starred argument* '`*`' will create the new *"meta-key"* for the environment `enumext*` and for *"all levels"* of the environment `enumext`. For example: `\setenumextmeta*{midsep}{topsep=3pt, partopsep=0pt}` will create a new key `midsep` available for all levels of the `enumext` environment and the `enumext*` environment and we can use it like any other key so `\begin{enumext}[midsep]` and `\begin{enumext*}[midsep]` will be valid.

5 The keyval system

The ⟨*key = val*⟩ system used by the enumext package is implemented using `l3keys` so it must be noted that ⟨*keys*⟩ marked as *"value forbidden"*, that is ⟨*key*⟩ is different from ⟨*key=*⟩.

All ⟨*keys*⟩ described in this section are available for the `enumext`, `enumext*`, `keyans` and `keyans*` environments with the exception of the keys `series`, `resume`, `resume*`, `reset` and `reset*` which are only available for the `enumext` and `enumext*` environments; and the keys `mini-right`, `mini-right*` which are only available for the `enumext*` and `keyans*` environments.

All ⟨*keys*⟩ related to vertical or horizontal spacing accept a *"skip"* or *"dim"* expression if passed between braces, i.e. you do not need to use `\dimeval` or `\dimexpr` to perform calculations.

🎯 It should be kept in mind that using any ⟨*key*⟩ that sets *rubber lengths* or *rigid lengths* for vertical or horizontal space on a level will influence the vertical and horizontal space for *inners levels* and `keyans`, `keyans*` and `keyanspic` environments.

5.1 Keys for `label` and `ref`

mode-box ⟨*value forbidden*⟩   default: *not used*

This is a *"switch-key"* that does not receive an argument and is "only" available for the *"first level"* of the `enumext` environment and the `enumext*` environment. When this is set the `label`, `font`, `wrap-label` and `wrap-label*` keys are executed within `\makebox` for the `enumext` and `keyans` environments.

🏷 This key is intended for compatibility with *tagged* PDF and is forcibly *"enabled"* when `\DocumentMetadata` is present. If you want to get the same document output whether `\DocumentMetadata` is active or not, you must enable this key.

🎯 In the `enumext*` and `keyans*` environments `\makelabel` is redefined using `\makebox` by default. If `enumext` or `keyans` is used in the `enumext*` environment the key must be activated manually.

label = {⟨`\alph*` | `\Alph*` | `\arabic*` | `\roman*` | `\Roman*` ⟩}   default: *by levels*

Sets the ⟨*label*⟩ that will be printed at the *current level* and default value for `labelwidth` key. The default value for the first level of the environments `enumext` and `enumext*` is `\arabic*.`, for second level are (`\alph*`), for third level are `\roman*.` and for fourth level is `\Alph*.`. For `keyans` and `keyans*` environments the default value is `\Alph*`).

🎯 This key is intended to give the basic structure with which the ⟨*label*⟩ will be displayed, and the form in which it is used by standard *"label and ref"* and the *"internal label and ref"* system with the `save-ref` key. You cannot use commands with ⟨*label*⟩ as an argument, for example `\emph{`⟨`\alph*`⟩`}` will return an error. For full customization of how ⟨*label*⟩ is displayed use the `font`, `wrap-label` and/or `wrap-label*` keys.

labelsep = {⟨*rigid length*⟩}   default: *0.3333em*

Sets the *horizontal space* between the box containing the current ⟨*label*⟩ defined by `label` key and the text of an item on the first line. Internally sets the value of `\labelsep` for the current level.

labelwidth = {⟨*rigid length*⟩}   default: *by label*

Sets the *width* of the label box containing the current ⟨*label*⟩ set by the `label` key. Internally sets the value of `\labelwidth` for the current level. The default values are calculated by means of the *width* of a box by setting a *value* to the current counter set by `label` key using '`0`' for `\arabic*`, '`M`' for `\Alph*`, '`m`' for `\alph*`, '`VIII`' for `\Roman*` and '`viii`' for `\roman*`.

widest = {⟨*integer* | *string*⟩}   default: *empty*

Sets the `labelwidth` key passing the ⟨*integer*⟩ or converting the ⟨*string*⟩ of the form `\Alph`, `\alph`, `\Roman` or `\roman` to a *value* for the current counter defined by `label` key, then calculating the *width* by means of a box. For example `widest={XXIII}` or `widest={23}` are equivalent. This key is useful when the default values of the `labelwidth` key are smaller than those actually used.

font = {⟨*font commands*⟩}   default: *empty*

Sets the *font style* for the current ⟨*label*⟩ defined by `label` key. You cannot use commands with an argument, for example `font={\small\textbf{#1}}` will return an error, but `font={\bfseries\small}` it will work. For full customization of how ⟨*label*⟩ is displayed use `wrap-label` and/or `wrap-label*` keys.

align = {⟨*left* | *right* | *center*⟩}   default: *left*

Sets the *aligned* of ⟨*label*⟩ defined by `label` key on the current level in the label box of width set by `labelwidth`.

wrap-label = {⟨*code* `{#1}` *more code*⟩}   default: *empty*

Wraps the *current* ⟨*label*⟩ defined by `label` key referenced by `{#1}` after executing the `align` and `font` keys. The {⟨*code*⟩} must be passed between braces and it does not modify the value set by the `labelwidth` key and is applied *only* on `\item` and `\item*`. When using it in the `\setenumext` command it is necessary to use the *double* '`{##1}`'. For example `wrap-label={\fbox{#1}}` or you can create a command:

```
\NewDocumentCommand \mywrap { s m }
  {
    \IfBooleanTF{#1}
      {\textcolor{red}{\textbf{Q}}\textcolor{blue}{\textbf{.}}\textcolor{gray}{#2}}
      {\textcolor{blue}{\textbf{Q}}\textcolor{red}{\textbf{.}}\textcolor{gray}{#2}}
  }
```

and then pass it through the key `wrap-label={\mywrap{#1}}` or `wrap-label={\mywrap*{#1}}`.

wrap-label* = {⟨*code* {#1} *more code*⟩}   default: *empty*

The same as the `wrap-label` key but also applies on `\item[`⟨*custom*⟩`]`.

ref = {⟨*code* {\alph*| \Alph*| \arabic*| \roman*| \Roman*} *more code*⟩}   default: *empty*

Modifies the way *cross references* are displayed. The `label` key sets the default form of the *cross references*, by using this key you can define a different format, for example: `ref=\emph{`⟨`\alph*`⟩`}` is valid.

Internally it renews the command associated with each counter when it is executed, i.e., in the environment `enumext` the command `\theenumXi` is modified when the key is executed at the first level, `\theenumXii` when it is executed at the second level and `\theenumXiii` together with `\theenumXiv` when it is executed at the third and fourth levels.

🎯 This must be kept in mind, since the values set by the `label` and `ref` keys are not cumulative by levels, so if you have used the `ref` key in the first level and then want to associate the counter with `label` or `ref` in the second level you must use the direct commands, i.e. `\arabic{eunumXi}` to indicate the count of the first level instead of using `\theenumXi`.

5.2 Keys for penalties

Page breaks in the provided environments are controlled by the following three parameters, which work together to ensure they look good, avoiding unsightly page breaks that could distort the output.

beginpenalty = {⟨*integer*⟩}   default: *-51*

Set the *page breaking* penalty for breaking at the beginning of the `enumext`, `enumext*`, `keyans` and `keyans*` environments. Internally sets the value of `\@beginparpenalty`.

midpenalty = {⟨*integer*⟩}   default: *-51*

Set the *page breaking* penalty for breaking between items of the `enumext`, `enumext*`, `keyans` and `keyans*` environments. Internally sets the value of `\@itempenalty`.

endpenalty = {⟨*integer*⟩}   default: *-51*

Set the *page breaking* penalty for breaking at the end of the `enumext`, `enumext*`, `keyans` and `keyans*` environments. Internally sets the value of `\@endparpenalty`.

🎯 The values passed to these ⟨*keys*⟩ affect the nested environments in which they were set and cannot be reset. LaTeX default is `-\@lowpenalty`, that is, `-51`. Because it is negative, it somewhat encourages a page break at each spot. Change it with, e.g., `\@beginparpenalty`=9999; a value of `10000` prohibits a page break. Please, refer to your LaTeX or TeX manual about how penalties control page breaks.

5.3 Keys for spaces

show-length = {⟨*true* | *false*⟩}   default: *false*

Displays on the terminal the values for *all list parameters* at the current level. For *vertical spaces* show the values of `\topsep`, `\itemsep`, `\parsep` and `\partopsep`. For *horizontal spaces* show the values of `\labelwidth`, `\labelsep`, `\itemindent`, `\listparindent` and `\leftmargin`.

5.3.1 Vertical spaces

topsep = {⟨*rubber length* | *rigid length*⟩}   default: *by levels*

Set the *vertical space* added to both the top and bottom of the list. Internally sets the value of `\topsep` for the current level. The default value for the first level of the environments `enumext` and `enumext*` are `8.0pt plus 2.0pt minus 4.0pt`, for second level are `4.0pt plus 2.0pt minus 1.0pt`, for third and fourth level are `2.0pt plus 1.0pt minus 1.0pt`. For `keyans` and `keyans*` environments the default value is `4.0pt plus 2.0pt minus 1.0pt`.

parsep = {⟨*rubber length* | *rigid length*⟩}   default: *by levels*

Set the *vertical space* between paragraphs within an item. Internally sets the value of `\parsep` for the current level. The default value for the first level of the environments `enumext` and `enumext*` are `4.0pt plus 2.0pt minus 1.0pt`, for second level are `2.0pt plus 1.0pt minus 1.0pt`, for third and fourth level are `0pt`. For `keyans` and `keyans*` environments the default value is `2.0pt plus 1.0pt minus 1.0pt`.

🎯 In the `enumext*` and `keyans*` environments this value is passed to `\parskip` within the `minipage` environment where *"item content"* is placed.

partopsep = {⟨*rubber length* | *rigid length*⟩}   default: *by levels*

Set the *vertical space* added, beyond `topsep`, to the "top" and "bottom" of the entire environment if the environment instance is preceded by a *"blank line"* or `\par` command. Internally sets the value of `\partopsep` for the current level. The default values for first and second level in environment `enumext` are `2.0pt plus 1.0pt minus 1.0pt`, for third and fourth level are `1.0pt minus 1.0pt`. For the `keyans` environment the

default value is `2.0pt plus 1.0pt minus 1.0pt`, and for the `keyans*` and `enumext*` environments it is available but *without* effect.

🔴 The value of this parameter also affects the *inner levels* and the environments `keyans`, `keyanspic` and `keyans*`. Caution should be taken with *"blank lines"* or `\par` command *"before"* each environment or nested level when formatting the source code of document. TEX will enter ⟨*vertical mode*⟩ and apply this value to the "top" and "bottom" the environment or nested level.

itemsep = {⟨*rubber length* | *rigid length*⟩} $\hspace{2cm}$ default: *by levels*

Set the *vertical space* between items, beyond the `parsep`. Internally sets the value of `\itemsep` for the current level. The default value for the first level of the environments `enumext` and `enumext*` are `4.0pt plus 2.0pt minus 1.0pt`, for the rest of the levels are `2.0pt plus 1.0pt minus 1.0pt`. For `keyans` and `keyans*` environments the default value is `4.0pt plus 2.0pt minus 1.0pt`.

🔴 In the `enumext*` and `keyans*` environments this value corresponds to the separation between rows.

noitemsep ⟨*value forbidden*⟩ $\hspace{2cm}$ default: *not used*

This is a *"meta-key"* that does not receive an argument. Set `itemsep` and `parsep` equal to `0pt` the entire level of environment.

nosep ⟨*value forbidden*⟩ $\hspace{2cm}$ default: *not used*

This is a *"meta-key"* that does not receive an argument. Sets all keys for vertical spacing equal to `0pt` the entire level of environment.

base-fix ⟨*value forbidden*⟩ $\hspace{2cm}$ default: *not used*

This is a *"switch-key"* that does not receive an argument available *only* for the *"first level"* of environment `enumext`. Fix the *baseline* when an environment `enumext` is nested in `enumext*` and there is no material between the `\item` and the start of the environment for example `\item \begin{enumext}` within the environment `enumext*`. Internally sets the keys `topsep`, `above` and `above*` at `0pt`.

🔴 This key is provided as a way to work around this minor issue, but you should be aware that if for some reason you have the `itemindent` key set in the `enumext*` environment it will be lost and you will need to adjust it using the `list-offset` key in the `enumext` environment.

Extra vertical spaces

🔴 The following ⟨*keys*⟩ should be used with *"caution"*, they are intended to be used at the "top" and "bottom" of the environment when the `columns` or `mini-env` keys do not provide adequate *vertical spaces*. The values passed can be *rubber* or *rigid* lengths, the way they are applied is the way you differ, using the *star* '*' ⟨*keys*⟩ applies `\vspace*` so that LATEX does *not discard* this space at page break.

above = {⟨*rubber length* | *rigid length*⟩} $\hspace{2cm}$ default: *not used*

Set the *extra vertical space* added, beyond `topsep`, to the top of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space *"above"* the environment without hindering the value of the `topsep` key. The space is added with `\vspace` so is *"discardable"*.

above* = {⟨*rubber length* | *rigid length*⟩} $\hspace{2cm}$ default: *not used*

Set the *extra vertical space* added, beyond `topsep`, to the top of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space *"above"* the environment without hindering the value of the `topsep` key. The space is added with `\vspace*` so is *"not discardable"*.

below = {⟨*rubber length* | *rigid length*⟩} $\hspace{2cm}$ default: *not used*

Set the *extra vertical space* space added, beyond `topsep`, to the bottom of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space on the *"below"* the environment without hindering the value of the `topsep` key. The space is added with `\vspace` so is *"discardable"*.

below* = {⟨*rubber length* | *rigid length*⟩} $\hspace{2cm}$ default: *not used*

Set the *extra vertical space* space added, beyond `topsep`, to the bottom of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space on the *"below"* the environment without hindering the value of the `topsep` key. The space is added with `\vspace*` so is *"not discardable"*.

5.3.2 Horizontal spaces

list-offset = {⟨*rigid length*⟩} $\hspace{2cm}$ default: *0pt*

Sets the *horizontal translation* of the entire environment level from the left edge of the box defined by the `labelwidth` key. Internally sets the values of `\leftmargin` and `\itemindent` for the current level.

list-indent = {⟨*rigid length*⟩} $\hspace{2cm}$ default: *labelwidth + labelsep*

Sets the *indentation* of the whole environment under the box defined by `labelwidth` and `labelsep` keys. Internally sets the value of `\leftmargin` and `\itemindent` for the current level. If `list-indent=0pt` is set in the environments `enumext` and `keyans` the ⟨*label*⟩ will be part of the text, separated by the value of the `labelsep` key and the *first word*, in simple terms it will look like a *"common paragraph"*.

🔴 The `enumext*` and `keyans*` environments are implemented using `\makebox` and `minipage` which causes *"list indent"* to always be equal to the value passed to `labelwidth` plus `labelsep`. Passing a value to this key is equivalent to setting the value for the `list-offset` key.

itemindent = {⟨*rigid length*⟩}   default: *0pt*

Sets the extra *horizontal indentation*, beyond `labelsep`, of the *"first line"* of each `\item` that is not followed by a *"blank line"* or the `\par` command . This value must be greater than or equal to `0pt` and is applied internally using `\hspace` *without* modifying the value of `\itemindent`.

🌱 This key is intended for the `enumext*` and `keyans*` environments where, by their implementation, it is not possible to adjust `labelwidth` and `list-indent` *without* modifying the output. If you use `enumext` or `keyans` and want to get around the *blank line* limitation or the `\par` command followed by `\item` you can modify `labelwidth` and `list-indent` and get the same effect.

rightmargin = {⟨*rigid length*⟩}   default: *0pt*

Set the *horizontal space* between the right margin of the environment and the right margin of the enclosing environment, the value it takes must be greater than or equal to `0pt`. Internally sets the value of `\rightmargin` for the current level.

listparindent = {⟨*rigid length*⟩}   default: *0pt*

Sets the *horizontal space* indentation, beyond `list-indent`, for second and subsequent paragraphs within a list item. Internally sets the value of `\listparindent` for the current level.

🌱 In the `enumext*` and `keyans*` environments this value is passed to `\parindent` within the `minipage` environment where *"item content"* is placed.

5.4 Keys for add code

The following ⟨*keys*⟩ should be used with *"caution"*, they are intended to inject {⟨*code*⟩} into different parts of the defined environments. We must keep in mind that the defined environments are based on the `list` base environment provided by LATEX which is defined (simplified) as plain form `\list`{⟨*arg one*⟩}{⟨*arg two*⟩}. Using the `before*` key does not allow access to the `list` parameters defined by [⟨*key = val*⟩].

before = {⟨*code*⟩}   default: *not used*

Execute {⟨*code*⟩} *"before"* the environment starts. The {⟨*code*⟩} must be passed between braces, is executed *"after"* all calculations related to the *list parameters* in the environment and the ⟨*keys*⟩ sets by [⟨*key = val*⟩] have been performed, that is, in the *second argument* of the list: `\begin{list}`{⟨*arg one*⟩}{⟨*arg two*⟩{⟨*code*⟩}}.

before* = {⟨*code*⟩}   default: *not used*

Execute {⟨*code*⟩} *"before"* the environment starts. The {⟨*code*⟩} must be passed between braces, is executed *"before"* performing all calculations related to the *list parameters* and the ⟨*keys*⟩ sets in [⟨*key = val*⟩] of the environment that is, *"before"* the arguments defining the list environment are executed: {⟨*code*⟩}`\begin{list}`{⟨*arg one*⟩}{⟨*arg two*⟩}.

first = {⟨*code*⟩}   default: *not used*

Executes {⟨*code*⟩} when *"starting"* the environment. The {⟨*code*⟩} must be passed between braces, is executed right *"after"* all *list parameters* are done, after the second argument of list, just before the first occurrence of `\item`: `\begin{list}`{⟨*arg one*⟩}{⟨*arg two*⟩}{⟨*code*⟩}`\item`.

🌱 Keep in mind that the {⟨*code*⟩} set in this ⟨*key*⟩ will affect the entire *"body"* of the environment and therefore the inner levels of the list and the `keyans`, `keyans*` and `keyanspic` environments. It is recommended to set this ⟨*key*⟩ per level. In the `enumext*` and `keyans*` environments this ⟨*key*⟩ is executed *"after"* the `listparindent`, `parsep` and `itemindent` ⟨*keys*⟩ within the `minipage` environment in which the *"item content"* is placed.

after = {⟨*code*⟩}   default: *not used*

Execute {⟨*code*⟩} *"after"* finishing the environment. The {⟨*code*⟩} must be passed between braces.

5.5 Keys for start, series and resume

start = {⟨*integer | integer expression*⟩}   default: *1*

Sets the *start value* of the numbering on the *"current level"*. The {⟨*integer expression*⟩} must be passed between braces, internally is evaluated and pass to the *"counter"* defined by `label` key on the current level, i.e. it is equivalent to enter `start={\dimeval{100*\value{chapter}}` or `start={100*\value{chapter}}`.

start* = {⟨*integer | string*⟩}   default: *not used*

Sets the *start value* of the numbering on the *"current level"*. Internally ⟨*string*⟩ is converted and passed as value to the *"counter"* defined by `label` key on the current level, i.e. it is equivalent to enter `start*=5`, `start*=E` or `start*=v`.

🌊 For compatibility with *tagged* PDF, the *start value* are set *"after"* the *second argument* to the `list` environment and *"before"* the execution of the first `\item` and the `first` key: `\begin{list}`{⟨*arg one*⟩}{⟨*arg two*⟩}`\setcounter`{enumX}`\item`.

🌱 The following ⟨*keys*⟩ are available only for the `enumext` and `enumext*` environments.

series = {⟨*series name*⟩}   default: *not used*

Stores the *keys* of the *optional argument* of the *"current level"* of the environment in which it is executed in {⟨*series name*⟩} which is used as an *argument* in the `resume` key. The ⟨*keys*⟩ stored in {⟨*series name*⟩} are NOT cumulative and are overwritten if the same {⟨*series name*⟩} is used again at the *"same level"* at which the key was executed.

🌱 For security reasons the `series` key will never save in {⟨*series name*⟩} the ⟨*keys*⟩ `series`, `resume`, `resume*`, `reset`, `reset*`, `save-ans`, `save-key`, `start*` and `start`.

resume = {⟨*series name*⟩} default: *not used*

Sets the *start value* and *options* for the *"current level"* continuing the numbering and *options* of the *"same level"* as the environment in which the series={⟨*series name*⟩} key was executed, the *start value* will continue numbering according to the last execution of resume={⟨*series name*⟩}. If passed *"without value"* this will only set *start value* continue the numbering of the *"same level"* from the last environment and level in which series={⟨*series name*⟩} or resume={⟨*series name*⟩} is NOT present and if the save-ans key is active (on the left) it will continue the numbering from the "last" environment in which it was executed. The *start value* can be overwritten using start or start* keys.

🎯 The resume key passed *"without value"* must be exactly *"without value"*, i.e. resume= cannot be used and if executed before resume* it will affect the *start value*.

resume* ⟨*value forbidden*⟩ default: *not used*

Sets the *start value* and *options* for the *"current level"* continuing the numbering and options of the *"same level"* as the last environment and level in which the series={⟨*series name*⟩} or resume={⟨*series name*⟩} keys are NOT present and if the save-ans key is active (on the left) it will continue the numbering and options from the "last" environment in which it was executed. The *start value* can be overwritten using start or start* keys.

🎯 When using the key resume={⟨*series name*⟩} or resume* you will have hierarchy in the ⟨*keys*⟩ that are stored in {⟨*series name*⟩} or in an internal version of {⟨*series name*⟩} in the case of resume*. If you want to *reset* the value of a ⟨*key*⟩ that is already stored in {⟨*series name*⟩} or in an internal version of {⟨*series name*⟩} this must be placed to the *right* of the key resume={⟨*series name*⟩} or resume*.

🎯 When the resume* key is executed consecutively, it does not rewrite the ⟨*keys*⟩ stored in the internal version of {⟨*series name*⟩} and if the environment that precedes it does not have the *optional argument*, it will just continue with the numbering.

5.6 Keys for reset

reset ⟨*value forbidden*⟩ default: *not used*

Resets the *start value* of the *"counters"* in the enumext and enumext* environments along with the *"internal counters"* used by the resume *without value* and resume* keys at the *"level"* at which it is executed. The *start value* can be overwritten using the start or start* keys.

reset* ⟨*value forbidden*⟩ default: *not used*

Resets the *start value* of the *"counters"* in the enumext and enumext* environments along with the *"internal counters"* used by the resume *without value* and resume* keys at the *"level"* at which it is executed and in the *"levels below"* it in the case of the enumext environment. The *start value* can be overwritten using the start or start* keys.

🎯 These keys are intended to be used in cases where the \resetenumext command does not work, e.g. after an unnumbered chapter. It should preferably be set *only* on the *first level*, although it is available for all levels.

5.6.1 The command \resetenumext

\resetenumext

\resetenumext[⟨1⟩]{⟨*some counter*⟩}   \resetenumext[⟨4⟩]{⟨*some counter*⟩}
\resetenumext[⟨2⟩]{⟨*some counter*⟩}   \resetenumext[⟨*⟩]{⟨*some counter*⟩}
\resetenumext[⟨3⟩]{⟨*some counter*⟩}   \resetenumext*{⟨*some counter*⟩}

The \resetenumext command *"resets"* the *start value* of the *"counters"* for the enumext and enumext* environments along with the *"internal counters"* used by the keys resume *without value* and resume* according to the value of {⟨*some counter*⟩}. For example \resetenumext{chapter} will *"reset"* the numbering of *"all levels"* of the enumext environment for each execution of a *"numbered"* chapter.

The *optional argument* of the form [1], [2], [3], [4] *"reset"* the values for levels 1, 2, 3 and 4 of the enumext environment, the form [*] *"reset"* the values for the enumext* environment. If is run *without* the *optional argument*, it will *"reset"* the values for *"all levels"* of the enumext environment.

The *starred argument* '*' will *"reset"* the values for *"all levels"* of the enumext and enumext* environments.

5.7 Keys for multicols

columns = {⟨*integer*⟩} default: *1*

Set the *number of columns* to be used by the multicols environment within the environments enumext and keyans. The value must be a positive integer less than or equal to 10. In the enumext* and keyans* environments they correspond to the default number of columns (without joining) and internally adjust the value of \itemwidth.

columns-sep = {⟨*rigid length*⟩} default: *by level*

Set the *space between* columns used by the multicols environment within the environments enumext and keyans. Internally sets the value of \columnsep, by default its value is equal to the sum of the values set in the keys labelwidth and labelsep of the current level. In the enumext* and keyans* environments they correspond to the *space between* columns (without joining) and internally adjust the value of \itemwidth.

5.8 Keys for `minipage`

`mini-env` = {⟨*rigid length*⟩} default: *not used*

Sets the *width* of the `minipage` environment on the *"right side"*. This value added to the value set by the `mini-sep` key to determines the *width* of the `minipage` environment on the *"left side"*, taking `\linewidth` as the maximum reference value.

`mini-sep` = {⟨*rigid length*⟩} default: *0.3333em*

Sets the *space between* the `minipage` environment on the *"left side"* and the `minipage` environment on the *"right side"*. This separation is applied together with `\hfill`.

5.8.1 The command `\miniright`

`\miniright` `\begin{enumext}[mini-env={`⟨*rigid length*⟩`}]` ⟨*item's before*⟩ `\item \miniright` ⟨*content*⟩ `\end{enumext}`
`\begin{enumext}[mini-env={`⟨*rigid length*⟩`}]` ⟨*item's before*⟩ `\item \miniright*`⟨*content*⟩ `\end{enumext}`

The `\miniright` command close the `minipage` environment on the *"left side"* and opens the `minipage` environment on the *"right side"* by starting it with the `\centering` command. It must be placed *"after"* the last `\item` of the current environment and *"before"* starting the material to be placed on the *"right side"*.

The *starred argument* '*' inhibits the use of `\centering` command i.e. the usual LATEX justification is maintained in the `minipage` on the *"right side"*.

5.8.2 The key `mini-right`

In the *horizontal list environments* `enumext*` and `keyans*` it is not possible to use the `\miniright` command and the `mini-right` key must be used instead.

`mini-right` = {⟨*content*⟩} default: *not used*

Set the *content* for the drawing or tabular to be placed in the `minipage` environment on the *"right side"* by starting it with `\centering`. The {⟨*content*⟩} must be passed between braces.

`mini-right*` = {⟨*content*⟩} default: *not used*

Same as above, but *without* starting with `\centering`.

6 The storage system

The entire mechanism for *"storing content"* it is activated according to `save-ans` key on the *"first level"* of `enumext` or `enumext*` environments and it is ignored if they are established when they are nested inside each other. Only when this ⟨*key*⟩ is *"active"* the `\anskey` command and the environments `anskey*`, `keyans`, `keyans*` and `keyanspic` are available.

```
\begin{enumext}[save-ans={⟨store name⟩}]
  \item Text \anskey{answer}
  \item Text
    \begin{keyans}
      ...
    \end{keyans}
\end{enumext}
```

```
\begin{enumext}[save-ans={⟨store name⟩}]
  \item Text \anskey{answer}
  \item Text
    \begin{keyanspic}
      ...
    \end{keyanspic}
\end{enumext}
```

By executing the key `save-ans`={⟨*store name*⟩} the entire *"structure"* of the environment (excluding the *first level*) including the *optional argument* passed to the inner levels or the environment nested in it, along with the ⟨*content*⟩ passed to `\anskey` or `anskey*`, the current ⟨*labels*⟩ for `\item*` and `\anspic*` in the environments `keyans`, `keyans*` and `keyanspic` will be *"stored"* in a *sequence* {⟨*store name*⟩} and at the same time will be *"stored"* (without the *"structure"* or *optional argument*) in a *prop list* {⟨*store name*⟩}.

For security reasons the *optional argument* of the inner levels or the nested environment are *filtered* by excluding all ⟨*keys*⟩ related to the *"storage system"* (§6.1) along with the keys `mini-env`, `mini-sep`, `mini-right`, `mini-right*`, `series`, `resume` and `resume*` when storing in *sequence* {⟨*store name*⟩} set by `save-ans` key.

6.1 Keys for storage system

The only ⟨*keys*⟩ available for all levels of the `enumext` environment and the `enumext*` environment are `no-store` and `save-key`, the rest of the ⟨*keys*⟩ described in this section must be passed directly in the *optional argument* of the *"first level"* of the environment in which the key `save-ans` is executed. The key `save-ans` should NOT be passed with the command `\setenumext`.

`save-ans` = {⟨*store name*⟩} default: *not set*

Sets the *name* of the *sequence* and *prop list* in which the {⟨*contents*⟩} will be *"stored"* by `\anskey` and `anskey*` in `enumext` and `enumext*` environments and the current ⟨*labels*⟩ for `\item*` and `\anspic*` in the environments `keyans`, `keyans*` and `keyanspic`. If the *sequence* or *prop list* {⟨*store name*⟩} does not exist, it will be created globally and will not be *overwritten* if the key is used again.

`save-key` = {⟨*key list*⟩} default: *not set*

This key *overrides* the default *"stored keys"* of the *optional argument* of the inner levels or nested environment that will be passed to the *sequence* {⟨*store name*⟩} set by `save-ans` key. The ⟨*key list*⟩ passed to this key ignores any ⟨*keys*⟩ in the *"stored structure"* and must be passed between braces. For example, if we execute at a second level:

```
\begin{enumext}[save-ans={⟨store name⟩}]
  \item Text \anskey{answer}
  \item Text
    \begin{enumext}[nosep, columns=2, save-key={columns=3}]
        ...
    \end{enumext}
\end{enumext}
```

The *"stored keys"* by default in the *sequence* {⟨*store name*⟩} would be `nosep` and `columns=2`, but using the key `save-key={columns=3}` will overwrite and the *"stored key"* in the *sequence* {⟨*store name*⟩} are only `columns=3` ignoring all the others.

save-sep = {⟨*text symbol*⟩}   default: *{, }*

Sets the *text symbol* that will separate the current ⟨*label*⟩ to the *optional argument* passed to the `\item*` and `\anspic*` in the environments `keyans`, `keyans*` and `keyanspic` and storing them in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key. The {⟨*text symbol*⟩} must always be passed between braces, whitespace '␣' is preserved within the braces and only affects the *"stored content"* and not what is displayed when using the `show-ans` or `show-pos` keys.

no-store ⟨*value forbidden*⟩   default: *not used*

This is a *"switch-key"* that does not receive an argument and disables the *"storing content"* in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key at the entire level or a nested environment in which it runs. This key is intended for use in internal levels or nested `enumext` or `enumext*` environments in which you want to use `enumext` or `enumext*` but *"without"* using the `\anskey` command or use `anskey*` environment and *"without"* interfering with the `check-ans` key.

6.1.1 Keys for `label` and `ref`

save-ref = {⟨*true* | *false*⟩}   default: *false*

Activates the *"internal label and ref"* mechanism for referencing *"stored content"* in *prop list* {⟨*store name*⟩} set by `save-ans` key. To reference the location of the *"stored content"* within the environment you must use `\ref{⟨store name : position⟩}`, where ⟨*position*⟩ corresponds to the position occupied by the *"stored content"* in the *prop list* {⟨*store name*⟩} returned by the `show-pos` key. For example `\ref{test:4}` will return `3.(b)` which corresponds to the location of the *"stored content"* at position 4 in *prop list* `test` within the environment in which the key `save-ans=test` was set.

mark-ref = {⟨*symbol*⟩}   default: *\textreferencemark*

Sets the *symbol* that will be displayed by the `\printkeyans` command only if the `hyperref` package is detected and the `save-ref` key are active. This *"symbol"* is used as a *"link"* between the environment in which the `save-ans` key was used and the place where the command is executed.

6.1.2 Keys for `wrap` and `marks`

The enumext package provides a set of ⟨*keys*⟩ to set and manipulate *"symbol marks"* associated with *"answers"* and how they are displayed and stored in the *sequence* and *prop list*.

The ⟨*keys*⟩ available for the `\anskey` command and the `anskey*` environment can be passed *"only"* in the *optional argument* in the *"first level"* of the `enumext` or `enumext*` environment.

The ⟨*keys*⟩ available for the `keyans` and `keyans*` environments can be passed locally in the *optional argument*, at the *"first level"* of the `enumext` or `enumext*` environment or via the `\setenumext` command with one minor difference, when ⟨*keys*⟩ are passed through the *"first level"* of the `enumext` or `enumext*` environment they are set in *"both"* environments, but when they are passed using the `\setenumext` command they are set *"individually"* in each environment.

show-ans = {⟨*true* | *false*⟩}   default: *false*

Display the *symbol* set by the `mark-ans` key to the left of the *mandatory argument* ⟨*content*⟩ passed to the `\anskey` command and ⟨*body*⟩ for the `anskey*` environment using the `wrap-ans` key if set. For `\item*` and `\anspic*` the `keyans`, `keyans*` and `keyanspic` environments it will display the *symbol* set by the `mark-ans*` key to the left of the current ⟨*label*⟩ and *optional argument*. If the *optional argument* is present in `\item*` or `\anspic*` it will be shown using `wrap-opt` key.

Keys for `\anskey` and `anskey*`

mark-ans = {⟨*symbol*⟩}   default: *\textasteriskcentered*

Sets the *symbol* to be displayed in the left margin for `\anskey` command and `anskey*` environment when using the key `show-ans`. The *"symbol"* is placed in a box of width equal to the value of `labelwidth` at the current level, separated by the value of the key `mark-sep` and aligned by the value of the key `mark-pos`. This key is not affected by the keys `font` or `wrap-label` so if you want to apply *styling* you have to do it directly, for example: `mark-ans={\textcolor{red}{\textbf{\textasteriskcentered}}`.

mark-pos = {⟨*left* | *right* | *center*⟩}   default: *left*

Sets the *aligned* of the *"symbol"* defined by `mark-ans` key for `\anskey` command and `anskey*` environment. The *"symbol"* is aligned in a box with the same dimensions of the label box defined by `labelwidth` key on the current level and separated by the value of the `mark-sep` key.

mark-sep = {⟨*rigid length*⟩} default: *labelsep*

Sets the *horizontal space* between the box containing the *"symbol"* defined by `mark-ans` key and the *mandatory argument* ⟨*content*⟩ passed to the `\anskey` command and the ⟨*body*⟩ in `anskey*` environment.

wrap-ans = {⟨*code* {#1} *more code*⟩} default: *\fbox+\parbox{#1}*

Wraps the *mandatory argument* ⟨*content*⟩ passed to the `\anskey` and the ⟨*body*⟩ in `anskey*` environment referenced by {#1} when using the `show-ans` or `show-pos` keys. The {⟨*code*⟩} must be passed between braces and only affects how the ⟨*content*⟩ or ⟨*body*⟩ is displayed and NOT the *"stored content"* in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key. If this key is passed using `\setenumext` it is necessary to use double '{##1}'.

Keys for keyans, keyans* and keyanspic

mark-ans* = {⟨*symbol*⟩} default: *\textasteriskcentered*

Sets the *symbol* to be displayed in the left margin for `\item*` and `\anspic*` for the `keyans`, `keyans*` and `keyanspic` environments when using the key `show-ans`. The *"symbol"* is placed in a box of width equal to the value of `labelwidth` of the environment in which it is executed, separated by the value of the key `mark-sep*` and aligned by the value of the key `mark-pos*`. This key is not affected by the keys `font` or `wrap-label` so if you want to apply *styling* you have to do it directly, for example: `mark-ans*={\textcolor{red}{\textbf{\textasteriskcentered}}}`.

mark-pos* = {⟨*left* | *right* | *center*⟩} default: *left*

Sets the *aligned* of the *"symbol"* defined by `mark-ans*` key for the `keyans`, `keyans*` and `keyanspic` environments. The *"symbol"* is aligned in a box with the same dimensions of the label box defined by `labelwidth` key of the environment in which it is executed and separated by the value of the `mark-sep*` key.

mark-sep* = {⟨*rigid length*⟩} default: *labelsep*

Sets the *horizontal space* between the box containing the *"symbol"* defined by `mark-ans*` key and the current ⟨*label*⟩ for `\item*` and `\anspic*` in the `keyans`, `keyans*` and `keyanspic` environments.

wrap-ans* = {⟨*code* {#1} *more code*⟩} default: *not used*

Wraps the *current* ⟨*label*⟩ when using the `show-ans` key for `\item*` and `\anspic*` referenced by {#1} in the `keyans`, `keyans*` and `keyanspic` environments after executing the `align` and `font` keys. The {⟨*code*⟩} must be passed between braces and *only* affects how the ⟨*label*⟩ is displayed and NOT the *"stored label"* in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key. This key overwrites the key `wrap-label` and if is passed using `\setenumext` it is necessary to use double '{##1}'. For example, if you want the ⟨*label*⟩ to be displayed in red when using `show-ans` you just set `wrap-ans*={\textcolor{red}{#1}}`.

wrap-opt = {⟨*code* {#1} *more code*⟩} default: *[[#1]]*

Wraps the *optional argument* passed to the `\item*` and `\anspic*` referenced by {#1} in the `keyans`, `keyans*` and `keyanspic` environments when using the `show-ans` or `show-pos` keys. The {⟨*code*⟩} must be passed between braces and only affects the current *optional argument* and NOT the *"stored content"* in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key. If this key is passed using `\setenumext` it is necessary to use double '{##1}'.

6.1.3 Keys for debug and checking

show-pos = {⟨*true* | *false*⟩} default: *false*

Displays the *position* occupied by the *"stored content"* by `\anskey`, `anskey*`, `\item*` and `\anspic*` in the *prop list* {⟨*store name*⟩} set by `save-ans` key. This position is used by the `\getkeyans` command and by the `\ref` command if the `save-ref` key is active.

check-ans = {⟨*true* | *false*⟩} default: *false*

Enables the *checking answer* mechanism displaying an appropriate message on the terminal. This key works under the logic that each `\item` or `\item*` that does not open an inner level or nested environment contains *"only one answer"* or *"only one execution"* of the `\anskey` or `anskey*`. It is intended to be used in conjunction with the `no-store` key.

6.2 The command `\anskey`

`\anskey` `\anskey[⟨keys⟩]{⟨content⟩}`

The command `\anskey` takes a mandatory non empty argument {⟨*content*⟩} and *"stores"* it in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key. By design the command cannot be nested or passed *verbatim material* in the argument and it is assumed that each *numbered* `\item` or `\item*` within the environment in which it is active it has a *"single execution"* of `\anskey` unless `\item` or `\item*` open a nested level or use the `no-store` key.

If `save-ref` key are active and the `hyperref`[8] package is detected, `\hyperlink` and `\hypertarget` will be used, otherwise the usual *"label and ref"* system provided by LaTeX will be used.

The `\anskey` command is available for all levels of the `enumext` environment and the `enumext*` environment, but is disabled for the `keyans`, `keyans*` and `keyanspic` environments.

6.2.1 Keys for \anskey

By default the *mandatory argument* ⟨*content*⟩ passed to \anskey when *"storing"* in the *sequence* {⟨*store name*⟩} has the form \item ⟨*content*⟩, the following ⟨*keys*⟩ allow modifying the way in which it is *"stored"* in the *sequence.*

break-col ⟨*value forbidden*⟩   default: *not used*

Stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form \columnbreak \item ⟨*content*⟩.

item-join = {⟨*columns*⟩}   default: *not set*

Set the *number of columns* to be used for \item(⟨*columns*⟩) and stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form \item(⟨*columns*⟩) ⟨*content*⟩.

item-star ⟨*value forbidden*⟩   default: *not used*

Stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form \item* ⟨*content*⟩.

item-sym* = {⟨*symbol*⟩}   default: *not set*

Sets the *symbol* for \item* when using the key item-star and stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form \item*[⟨*symbol*⟩] ⟨*content*⟩. The *symbol* can be in text or math mode, for example item-sym*={$\ast$} stores \item*[$\ast$] ⟨*content*⟩.

item-pos* = {⟨*rigid length*⟩}   default: *not set*

Sets the *offset* for \item* when using the keys item-star and item-sym* and stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form \item*[⟨*symbol*⟩][⟨*offset*⟩] ⟨*content*⟩.

Example

```
\begin{enumext}[save-ans=test,show-ans=true]
  \item* Text containing our instructions or questions. \anskey{⟨first answer⟩}
  \item Text containing our instructions or questions.
    \begin{enumext}
      \item Question.\anskey{⟨second answer⟩}
    \end{enumext}
  \item Text containing our instructions or questions. \anskey{⟨third answer⟩}
  \item Text containing our instructions or questions. \anskey{⟨fourth answer⟩}
\end{enumext}
```

★ 1. Text containing our instructions or questions.

∗ first answer

2. Text containing our instructions or questions.

  (a) Question.

   ∗ second answer

3. Text containing our instructions or questions.

∗ third answer

4. Text containing our instructions or questions.

∗ fourth answer

6.3 The environment anskey*

anskey* \begin{anskey*}[⟨*key = val*⟩] ⟨*body content*⟩ \end{anskey*}

The environment anskey* takes a mandatory {⟨*body content*⟩} and *"stores it"* in the *sequence* and *prop list* {⟨*store name*⟩} set by save-ans key. If save-ref key are active and the hyperref[8] package is detected \hyperlink and \hypertarget will be used, otherwise the usual *"label and ref"* system provided by LaTeX will be used.

By design the environment cannot be nested but full supports *"verbatim material"* in the ⟨*body*⟩ and it is assumed that *"each numbered"* \item or \item* within the environment in which it is active it has a *"single execution"* unless \item or \item* open a nested level or use the no-store key.

The anskey* environment is implemented using the new *"collect code"* c-type argument part of LaTeX release 2025-06-01[13]. \begin{anskey*} and \end{anskey*} must be in different lines and should not appear within verbatim environments or commands. All ⟨*keys*⟩ must be passed separated by commas and "without separation" of the start of the environment.

Comments "%" or "any character" after \begin{anskey*} or [⟨*key = val*⟩] on the same line are NOT supported, LaTeX will return an "error" message if this happens. In a similar way comments "%" or "any character" after \end{anskey*} on the same line LaTeX will return a "warning" message.

6.3.1 Keys for anskey*

The anskey* environment uses the same ⟨*keys*⟩ as the \anskey command next to the ⟨*keys*⟩ write-env, overwrite and force-eol. The environment is available for all levels of the enumext environment and the enumext* environment, but it is disabled for the keyans, keyans* and keyanspic environments.

write-env = {⟨*file.ext*⟩}   default: *not used*

Sets the *name* of the ⟨*external file*⟩ in which the ⟨*contents*⟩ of the environment will be written. The ⟨*file.ext*⟩ will be created in the working directory, relative or absolute paths are not supported. If ⟨*file.ext*⟩ does not exist, it will be created or overwritten if the overwrite key is used.

overwrite = { ⟨*true* | *false*⟩ } default: *false*

Sets whether the ⟨*file.ext*⟩ generated by `write-env` from the `anskey*` environment will be rewritten.

force-eol = { ⟨*true* | *false*⟩ } default: *false*

Sets if the *last end of line* for the ⟨*stored content*⟩ is hidden or not. This key is necessary only if the last line is the closing of some environment defined by the `fancyvrb` package as `\end{Verbatim}` or another environment that does not support a comments "%" after closing `\end{Verbatim}%`.

Example

```
\begin{enumext}[save-ans=test,show-pos=true,start=5]
  \item* Text containing our instructions or questions.
    \begin{anskey*}[item-star]
      ⟨first answer⟩
    \end{anskey*}

  \item Text containing our instructions or questions.
    \begin{enumext}
      \item Question.
        \begin{anskey*}
          ⟨second answer⟩
        \end{anskey*}
    \end{enumext}

    \item Text containing our instructions or questions.
      \begin{anskey*}
        ⟨third answer⟩
      \end{anskey*}

    \item Text containing our instructions or questions.
      \begin{anskey*}
        ⟨fourth answer⟩
      \end{anskey*}
  \end{enumext}
```

⋆ 5. Text containing our instructions or questions.

[5] First answer with `verbatim`

6. Text containing our instructions or questions.

   (a) Question.

    [6] second answer

7. Text containing our instructions or questions.

[7] third answer

8. Text containing our instructions or questions.

[8] fourth answer

6.4 The environments keyans and keyans*

keyans   `\begin{keyans}[`⟨*key = val*⟩`] \item \item[`⟨*custom*⟩`] \item* \item*[`⟨*content*⟩`] \end{keyans}`

keyans*   `\begin{keyans*}[`⟨*key = val*⟩`] \item \item[`⟨*custom*⟩`] \item* \item*[`⟨*content*⟩`] \end{keyans*}`

The `keyans` and `keyans*` environments are *"enumerated list"* environments designed for *"multiple choice"* questions activated by the `save-ans` key.

This environments can NOT be nested and must always be at the *"first level"* of the `enumext` environment, the commands `\item` and `\item[`⟨*custom*⟩`]` work in the usual and the command `\item(`⟨*columns*⟩`)` is available for the `keyans*` environment.

💣 The behavior of `\item*` in `keyans` and `keyans*` environments is NOT the same as in the `enumext` or `enumext*` environments.

```
\begin{enumext}[save-ans=test]
  \item  ⟨item content⟩
    \begin{keyans}[⟨key = val⟩]
      \item  ⟨item content⟩
      \item  [⟨custom⟩]  ⟨item content⟩
      \item*  ⟨item content⟩
      \item*[⟨content⟩]  ⟨item content⟩
    \end{keyans}
\end{enumext}
```

```
\begin{enumext}[save-ans=test]
  \item  ⟨item content⟩
    \begin{keyans*}[⟨key = val⟩]
      \item  ⟨item content⟩
      \item  [⟨custom⟩]  ⟨item content⟩
      \item*  ⟨item content⟩
      \item*[⟨content⟩]  ⟨item content⟩
    \end{keyans*}
\end{enumext}
```

The ⟨*keys*⟩ set in the *optional argument* of the environment are the same (almost) as those of the `enumext` and `enumext*` environments and have *higher precedence* than those set by `\setenumext[`⟨*keyans*⟩`]{`⟨*key = val*⟩`}` or `\setenumext[`⟨*keyans**⟩`]{`⟨*key = val*⟩`}`. If the *optional argument* is not passed or the ⟨*keys*⟩ are not set by `\setenumext`, the default values will be the same as the *"second level"* of the `enumext` environment with the difference in the ⟨*label*⟩ which will be set to `label=\Alph*)`.

The keys `mark-ans*`, `mark-pos*`, `mark-sep*`, `save-sep`, `wrap-opt`, `wrap-ans*`, `show-ans` and `show-pos` are available for both environments.

6.4.1 The \item* in keyans and keyans*

\item*

```
\item*
\item*[⟨content⟩]
```

The \item* and \item*[⟨content⟩] command *"store"* the current ⟨label⟩ set by label key next to the *optional argument* ⟨content⟩ in *sequence* and *prop list* {⟨store name⟩} set by save-ans key in the *"first level"* of the enumext or enumext* environments.

The *starred argument* '*' cannot be separated by spaces '␣' from the command, i.e. \item* and the *optional argument* does "NOT" support *verbatim content*. By design it is assumed that the \item* will only appear *"once"* within the environment.

Example

```
\begin{enumext}[save-ans=test,columns=2,show-ans=true]
  \item Text containing a question.

    \begin{keyans*}[nosep,columns=2]
      \item Choice
      \item* Correct choice
      \item Choice
      \item Choice
      \item Choice
    \end{keyans*}

  \item Text containing a question and image.

    \begin{keyans}[nosep,mini-env={0.4\linewidth}]
      \item Choice
      \item Choice
      \item Choice
      \item Choice
      \item*[⟨note⟩] Correct choice
      \miniright
      \includegraphics[scale=0.25]{example-image-a}
      Some text
    \end{keyans}
\end{enumext}
```

1. Text containing a question.
   - A) Choice
   - ∗ B) Correct choice
   - C) Choice
   - D) Choice
   - E) Choice

2. Text containing a question and image.
   - A) Choice
   - B) Choice
   - C) Choice
   - D) Choice
   - ∗ E) [note] Correct choice

Some text

6.5 The environment keyanspic

keyanspic

```
\begin{keyanspic}[⟨key = val⟩] \anspic*[⟨content⟩]{⟨drawing or tabular⟩} \end{keyanspic}
```

The keyanspic environment is an *"enumerated list"* environment activated by the save-ans key that has the same configuration for *"spacing"* and ⟨label⟩ as the keyans environment that uses the \anspic command instead of \item. It is intended for placing *drawings or tabular* with ⟨label⟩ centered *above* or *below* in a *single line* or *upper and lower* layout style.

When the keyanspic environment is used *without keys* the ⟨labels⟩ are centered *below* the *drawings or tabular* in a *single line* layout style.

A representation of the output can be seen in the figure 6.
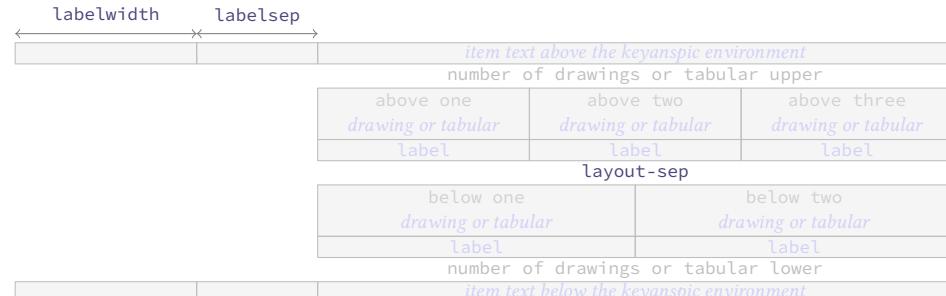

Figure 6: Representation of the keyanspic environment with layout-sty={⟨3, 2⟩} in enumext.

This environment cannot be nested and must *always* be at the *"first level"* of the enumext environment, the \item command is disabled and ⟨keys⟩ cannot be set using \setenumext.

6.5.1 Keys for keyanspic

label-pos = {⟨*above* | *below*⟩} default: *below*

Set the *position* of ⟨*label*⟩ to be centered "above" or "below" *drawings* or *tabular* when the `\anspic` command is executed.

label-sep = {⟨*rubber length* | *rigid length*⟩} default: *internal adjustment*

Set the *vertical spacing* between the ⟨*label*⟩ centered "above" or "below" and *drawings* or *tabular* when running the `\anspic` command.

layout-sty = {⟨*n° upper , n° lower*⟩} default: *not set*

Set the *number* of *drawings* or *tabular* that will be distributed "upper" and "lower" within the environment when executing the `\anspic` command. The value must be passed in braces and if not set or the ⟨*nº lower*⟩ is omitted the *drawings* or *tabular* will be put on a *single line.*

layout-sep = {⟨*rubber length* | *rigid length*⟩} default: *adjusted parsep from keyans*

Set the *vertical separation* between the number of *drawings* or *tabular* placed at the "upper" and "lower" within the environment when executing the `\anspic` command. Internally adjusts the `parsep` value taken from the `keyans` environment.

layout-top = {⟨*rubber length* | *rigid length*⟩} default: *adjusted topsep from keyans*

Set the *vertical space* added to both the top and bottom of the environment. Internally adjust the value of `topsep` taken from `keyans` environment.

The keys `mark-ans*`, `mark-pos*`, `mark-sep*`, `save-sep`, `wrap-opt`, `wrap-ans*`, `show-ans` and `show-pos` are available for this environment.

6.5.2 The command `\anspic`

`\anspic` `\anspic{⟨drawing or tabular⟩}`
`\anspic*[⟨content⟩]{⟨drawing or tabular⟩}`

The `\anspic` command take three arguments, the *starred argument* '*' store the current ⟨*label*⟩ next to the *optional argument* ⟨*content*⟩ in *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key.

The *starred argument* '*' cannot be separated by spaces '␣' from the command, i.e. `\anspic*` and the *optional argument* does "NOT" support *verbatim content.* By design it is assumed that the *starred argument* '*' will only appear *"once"* within the environment.

Example

```
\begin{enumext}[save-ans=test,show-ans=true,nosep]
  \item Question with images and labels below.

    \begin{keyanspic}[layout-sty={3,2}]
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-b}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
    \end{keyanspic}

  \item Question with images and labels above.

    \begin{keyanspic}[label-pos=above, layout-sty={3,2},layout-sep=0.25cm]
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-b}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
    \end{keyanspic}

  \item Question with images and labels below on a single line.

    \begin{keyanspic}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-b}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
    \end{keyanspic}

\end{enumext}
```
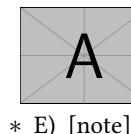

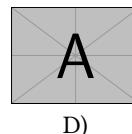

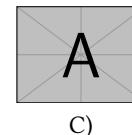

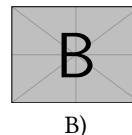

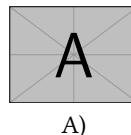

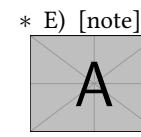

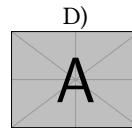

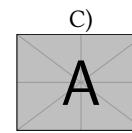

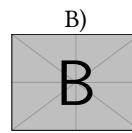

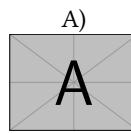

1. Question with images and labels below.

∗ E) [note]

3. Question with images and labels below on a single line.

A) B) C) D) ∗ E) [note]

🏷 Remember to pass the `alt={⟨description⟩}` key to the `\includegraphics` command when creating a *tagged* PDF.

6.6 Printing stored content

6.6.1 The command `\getkeyans`

`\getkeyans`

`\getkeyans{⟨store name : position⟩}`

The command `\getkeyans` prints the *"stored content"* in *prop list* `{⟨store name⟩}` defined by `save-ans` key in the ⟨*position*⟩ returned by the `show-pos` key.

The *"stored content"* can only be accessed *after* it is stored, if `{⟨store name⟩}` does not exist the command will return an error.

The form taken by the argument `{⟨store name : position⟩}` is the same as that used to generate the *"internal label and ref"* system when `save-ref` key are active, so to refer to a *"stored content"*. For example `\getkeyans{test:4}` will return the *"stored content"* at position 4 of the environment in which the key `save-ans=test` was set.

6.6.2 The command `\foreachkeyans`

`\foreachkeyans`

`\foreachkeyans[⟨key = val⟩]{⟨store name⟩}`

The command `\foreachkeyans` goes through and executes the command `\getkeyans` on the contents in *prop list* `{⟨store name⟩}`. If you pass without options run `\getkeyans` on all contents in *prop list* `{⟨store name⟩}`.

Options for command

`sep` = `{⟨code⟩}`   default: *{; }*

Establishes the *separation* between *"each"* `{⟨content⟩}` stored in *prop list* `{⟨store name⟩}`. For example, you can use `sep={\\[10pt]}` for vertical separation of stored contents.

`step` = `{⟨integer⟩}`   default: *1*

Sets the *step* (increment) applied to the value set by key `start` for *"each"* `{⟨content⟩}` stored in *prop list* `{⟨store name⟩}`. The value must be a ⟨*positive integer*⟩.

`start` = `{⟨integer⟩}`   default: *1*

Sets the *position* of the *prop list* `{⟨store name⟩}` from which execution will start. The value must be a ⟨*positive integer*⟩.

`stop` = `{⟨integer⟩}`   default: *0*

Sets the *position* of the *prop list* `{⟨store name⟩}` from which execution will finish. The value must be a ⟨*positive integer*⟩.

before = {⟨*code*⟩}   default: *empty*

> Sets the {⟨*code*⟩} that will be executed ⟨*before*⟩ each {⟨*content*⟩} stored in *prop list* {⟨*store name*⟩}. The {⟨*code*⟩} must be passed between braces.

after = {⟨*code*⟩}   default: *empty*

> Sets the {⟨*code*⟩} that will be executed ⟨*after*⟩ each {⟨*content*⟩} stored in *prop list* {⟨*store name*⟩}. The {⟨*code*⟩} must be passed between braces.

wrapper = {⟨*code* {#1} *more code*⟩}   default: *empty*

> Wraps the {⟨*content*⟩} stored in *prop list* {⟨*store name*⟩} referenced by {#1}. The {⟨*code*⟩} must be passed between braces. For example `\foreachkeyans[wrapper={\makebox[1em][l]{#1}}]{`⟨*store name*⟩`}`.

6.6.3   The command `\printkeyans`

`\printkeyans`

`\printkeyans{`⟨*store name*⟩`}`
`\printkeyans[`⟨*keys*⟩`]{`⟨*store name*⟩`}`
`\printkeyans*[`⟨*keys*⟩`]{`⟨*store name*⟩`}`

The command `\printkeyans` prints *"all stored content"* in *sequence* {⟨*store name*⟩} defined by `save-ans` key placing this inside the `enumext` or `enumext*` environment if the *starred argument* '`*`' is used.

The *"stored content"* can only be accessed *after* it is stored in the *sequence*, if {⟨*store name*⟩} does not exist the command will return an error.

The *optional argument* allows managing the ⟨*keys*⟩ in the *"first level"* of the environment in which the *"stored content"* of the *sequence* {⟨*store name*⟩} will be printed, if the *starred argument* '`*`' is used it will be `enumext*` otherwise `enumext`.

The default values for the *"first level"* are the same as the default values for the `enumext` and `enumext*` environments along with the keys `nosep,first=\small,font=\small` and `columns=2`. For the inner levels of the environment `enumext` saved in the *sequence* {⟨*store name*⟩} the default values are the same as those established for the second, third and fourth levels plus the keys `nosep,first=\small,font=\small`. If the environment `enumext*` is saved within the *sequence* {⟨*store name*⟩} it will have the same default values plus the keys `nosep,first=\small, font=\small`.

Since the command encapsulates by default the `enumext` environment or the `enumext*` environment, we must take some considerations:

- If we execute `\printkeyans*{`⟨*store name*⟩`}` and the *sequence* {⟨*store name*⟩} already contains any `enumext*` environment an error will be returned as we cannot nest.

- If we execute `\printkeyans*{`⟨*store name*⟩`}` and the *sequence* {⟨*store name*⟩} contains any `enumext` environments, they will start with the ⟨*keys*⟩ set for the first level unless they are set in the *optional argument* or `save-key` is used to modify it.

- If we execute `\printkeyans{`⟨*store name*⟩`}` and the *sequence* {⟨*store name*⟩} contains any environment `enumext*`, they will start with the ⟨*keys*⟩ set by default unless they are set in the *optional argument* or `save-key` is used to modify it.

The default values for the *"first level"* of `\printkeyans` commands and `\printkeyans*` are established using `\setenumext[`⟨*print , 1*⟩`]{`⟨*keys*⟩`}` and `\setenumext[`⟨*print**⟩`]{`⟨*keys*⟩`}`.

If we need to set the ⟨*keys*⟩ for the environment `enumext` "saved" in the *sequence* {⟨*store name*⟩} we will use `\setenumext[`⟨*print , level*⟩`]{`⟨*keys*⟩`}` and if we need to set the ⟨*keys*⟩ for the environment `enumext*` "saved" in the *sequence* {⟨*store name*⟩} we will use `\setenumext[`⟨*print , **⟩`]{`⟨*keys*⟩`}`.

Example

```
\begin{enumext}[save-ans=sample,columns=1,show-pos=true,nosep,save-ref=true]
  \item Factor $3x+3y+3z$. \anskey{$3(x+y+z)$}
  \item True False

    \begin{enumext}[nosep]
      \item \LaTeX2e\ is cool? \anskey{Very True!}
    \end{enumext}

  \item Related to Linux

    \begin{enumext}[nosep]
      \item You use Linux? \anskey{Yes}
      \item Rate the following package and class
        \begin{enumext}[nosep]
          \item \texttt{xsim} \anskey{very good}
          \item \texttt{exsheets} \anskey{obsolete}
        \end{enumext}
    \end{enumext}
\end{enumext}
```

```
The answer to \ref{sample:4} is \getkeyans{sample:4} and the answers to
all the worksheets are as follows:

\printkeyans{sample}
```

1. Factor $3x + 3y + 3z$.

[1] | $3(x + y + z)$

2. True False
   (a) LaTeX2e is cool?
   [2] | Very True!

3. Related to Linux
   (a) You use Linux?
   [3] | Yes
   (b) Rate the following package and class
       i. `xsim`
       [4] | very good
       ii. `exsheets`
       [5] | obsolete

The answer to 3.(b).i is very good and the answers to all the worksheets are as follows:

1. $3(x + y + z)$ ※
2. (a) Very True! ※
3. (a) Yes ※
   (b) i. very good ※
       ii. obsolete ※

7   Full examples

Here I will leave as an example some adaptations questions taken from TeX-SX. The examples are attached to this documentation and can be extracted from your PDF viewer or from the command line by running:

```
$ pdfdetach -saveall enumext.pdf
```

and then you can use the excellent arara[1] tool to compile them.

Example 1

Adapted from the response given by Enrico Gregorio in Squares for answer choice options and perfect alignment to mathematical answers 📄.

1. La velocità di $1{,}00 \times 10^2$ m/s espressa in km/h è:
   A 36 km/h.
   B 360 km/h.
   C 27,8 km/h.
   D $3{,}60 \times 10^8$ km/h.

2. In fisica nucleare si usa l'angstrom (simbolo: $1\,\text{Å} = 1 \times 10^{-10}$ m) e il fermi o femtometro ($1\,\text{fm} = 1 \times 10^{-15}$ m). Qual è la relazione tra queste due unità di misura?
   A $1\,\text{Å} = 1 \times 10^5$ fm.
   B $1\,\text{Å} = 1 \times 10^{-5}$ fm.
   C $1\,\text{Å} = 1 \times 10^{-15}$ fm.
   D $1\,\text{Å} = 1 \times 10^3$ fm.

3. La velocità di $1{,}00 \times 10^2$ m/s espressa in km/h è:
   A 36 km/h.
   B 360 km/h.
   C 27,8 km/h.
   D $3{,}60 \times 10^8$ km/h.

4. In fisica nucleare si usa l'angstrom (simbolo: $1\,\text{Å} = 1 \times 10^{-10}$ m) e il fermi o femtometro ($1\,\text{fm} = 1 \times 10^{-15}$ m). Qual è la relazione tra queste due unità di misura?
   A $1\,\text{Å} = 1 \times 10^5$ fm.
   B $1\,\text{Å} = 1 \times 10^{-5}$ fm.
   C $1\,\text{Å} = 1 \times 10^{-15}$ fm.
   D $1\,\text{Å} = 1 \times 10^3$ fm.

8   Tagged PDF examples

This section is just to show the compatibility of enumext with *tagged* PDF using `lualatex`. The attached files here are just for testing and are intended as examples and, in a way, to simplify the time of Matthew Bertucci (`@mbertucci`) when he sees this excellent package and adds it to The LaTeX Tagged PDF repository.

To compile the tests with `lualatex-dev` the packages `multicol`, `unicode-math`, `geometry`, `graphicx`, `luamml` and `hyperref` are required along with the line:

```
\DocumentMetadata{lang = en-US, pdfversion = 2.0, pdfstandard = ua-2, tagging=on,}
```

All examples have been checked using `veraPDF` together with `ngpdf`.

- The file `enumext-01.tex` contains the basic tests for the `enumext` and `enumext*` environments and the nesting between them plus the use of the `label`, `labelwidth`, `labelsep`, `ref`, `align` and `wrap-label` keys. Source file 📄 and *tagged* PDF 📄.
- The file `enumext-02.tex` contains the tests for the `enumext` and `enumext*` environments and the support for `minipage` and `multicols` environments using the keys `columns`, `columns-sep`, `mini-env`, `mini-right` and `\miniright` command. Source file 📄 and *tagged* PDF 📄.
- The file `enumext-03.tex` contains the tests for the `enumext` and `keyanspic` environments activated by the `save-ans` key together with the `save-sep` and `save-ref` keys and the `\printkeyans` command. Source file 📄 and *tagged* PDF 📄.
- The file `enumext-04.tex` contains the tests for the `\anskey` command and the `anskey*` environment activated by the `save-ans` key along with the `\getkeyans` and `\printkeyans` commands. Source file 📄 and *tagged* PDF 📄.
- The file `enumext-05.tex` contains the tests for the environments `keyans`, `keyans*` and `keyanspic` activated by the key `save-ans` together with the keys `no-store` and `show-ans` and the commands `\setenumext`, `\setenumextmeta`, `\printkeyans` and `\foreachkeyans`. Source file 📄 and *tagged* PDF 📄.
- The file `enumext-06.tex` contains the tests for the environments `enumext` and `enumext*` for *fake* `itemize` and `description`. Source file 📄 and *tagged* PDF 📄.
- The file `enumext-07.tex` contains the tests for starting the environments with `\setenumext{resume}`, the `\resetenumext` command and the `series`, `resume`, `resume*` and `reset` keys. Source file 📄 and *tagged* PDF 📄.

9   The way of non-enumerated lists

It is possible to use (or abuse) the `enumext` and `enumext*` environments to mimic *non-enumerated* list environments such as `itemize` and `description`, clearly the ⟨*keys*⟩ to *"store answers"*, the `keyans`, `keyans*` and `keyanspic` environments lose their sense and it is not the focus of enumext package, but, why not to do it?.

Here I leave as an example other uses of the `enumext` environment that can be helpful for specific purposes. The *trick* to generate these *"fake environments"* is set `label={}` or `label={⟨some⟩}` and play with the `list-indent`, `list-offset`, `font` and `wrap-label` keys.

Fake `itemize` environment

Here we set the `label` key using the default settings in LaTeX for the four levels `\textbullet`, `\textendash`, `\textasteriskcentered` and `\textperiodcentered` together with the `nosep` key to reduce the vertical spaces in the left side example and set the `label` key in *mathematical mode* for the right side as `\ast`, `\diamond`, `\circ` and `\star` for the four levels together with the `nosep` key

- First level item   ∗ First level item
  – Second level item   ⋄ Second level item
    ∗ Third level item   ∘ Third level item
      · Fourth level item   ⋆ Fourth level item
- First level item   ∗ First level item

Fake `description` environment

Here we set `label={}` and `list-indent=2.5em,font=\bfseries`.

SomeThing A short one-line description.
 This is an entry *without* a label.
Something A short *one-line* description text.
Something long A much *longer* description text may take more than one line or more than one paragraph.
     Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

If we add `list-indent=0pt` you get *widest style*:

SomeThing A short one-line description.
 This is an entry *without* a label.
Something A short *one-line* description text.
Something long A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

- ☝ The small space at the beginning of the *"unlabeled entry"* corresponds to `\labelsep` and can be removed using `\hspace{-\labelsep}` at the beginning of the line.

- ☝ When *tagged* PDF is active the default `description` style is NOT available due to the redefinition of `\makelabel` for the `align` key which uses `\makebox` in this case, meaning that `\item[⟨content⟩]` will not extend beyond `\labelwidth` which causes overlaps,

Description indented by label

Here we set `label={}` and we will give a convenient value to `labelsep` and `labelwidth`, for example we can take as reference our *longest label* and pass it as value using:

```
\newlength{\descitemwd}
\settowidth{\descitemwd}{\textbf{Something long}}
```

and then use `labelsep=4pt,labelwidth=\descitemwd,font=\bfseries`.

SomeThing   A short one-line description.
                    This is an entry *without* a label.
Something   A short one-line description.
Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

The environment can be translated so that the ⟨*labels*⟩ are on the left margin calculating the value passed to the `list-offset` key, in this case it will be equal to the sum of the values set by the `labelwidth` and `labelsep` keys finally resulting as `list-offset={-\descitemwd - 4pt}`.

SomeThing   A short one-line description.
                    This is an entry *without* a label.
Something   A short one-line description.
Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

If we add `align=right` it will look like this:

     SomeThing A short one-line description.
                    This is an entry *without* a label.
      Something A short one-line description.
Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

- ☝ At this point we have used `list-offset={-\descitemwd - 4pt}` instead of `list-offset={-\labelwidth - \labelsep}`, this is because the parameters `\labelwidth` and `\labelsep` take the default values, as if we had not set `label`.

Description with multi-line labels

The `label` key does not accept *multiline material*, this is where the `wrap-label` and `wrap-label*` keys comes into play. Unlike the `enumitem` package, the `align` key only supports three options, so what we will do is create a command in the style `\parleft` of `enumitem` that allows us to place *multiline labels* using `\parbox`.

```
\NewDocumentCommand \labelbx { s +m }
  {%
    \SuspendTagging{\parbox}%
    \IfBooleanTF{#1}
      {\strut\smash{\parbox[t]{\labelwidth}{\raggedright{#2}}}}%
      {\strut\smash{\parbox[t]{\labelwidth}{\raggedleft{#2}}}}%
    \ResumeTagging{\parbox}%
  }
```

Now we just need to set `wrap-label*={\labelbx{#1}}`.

SomeThing A short one-line description.
               This is an entry *without* a label.
 Something A short one-line description.
**Something
        long** A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.
               Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

SoMeThInG LoNg A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

Final notes

The original implementation (if you can call it that) of the ideas that led to the creation of enumext were some macros using the enumerate[5] package for personal use created in early 2003, the code was quite questionable, but functional for these simple requirements.

With the great answers given by Christian Hupfer in Create a fake label ref using list and the answer given by David Carlisle in Change the use of label ref by data save in an array (list) I managed to create a more solid code than the original version, now using the l3prop[11] and l3seq[11] modules together with the hyperref[8] and enumitem[6] packages, which did the job, but with some limitations.

As time went by I took these limitations as a personal challenge which I called *"reinventing the wheel"*, since there were packages and classes that did more or less what I was looking for, but did not fit my simple requirements. This *"reinventing the wheel"* finally ended up becoming enumext.

Why list environments?

The answer is simple, first I love the beauty of its syntax and many of what I had already written used the enumerate environment or lists created using the enumitem package. In my mind I thought: how complicated could it be to write a package that looked like enumitem? It seemed simple enough, of course I didn't have in mind the mess I was getting into working with list environments, minipage and adding support for the multicol and hyperref packages.
Of course, seeing the final result of the experiment *"reinventing the wheel"* I am quite satisfied.

Why not random questions and other utilities

The *"random"* type questions I love and hate them at the same time, although they simplify a lot the work when creating a multiple choice test, but you lose the beauty of typesetting a document with LaTeX, that is to say the output does not always look as nice as it should, even if they are only alternatives these must follow a certain order when presented either numerical or presentation, that said handling that using *nested lists* is quite complicated so I do not classify to be implemented.

Why has it taken so long?

One of the setbacks, beyond my laziness, was including compatibility with *tagged* PDF. To be honest, it's something I never considered at any point, but I firmly believe that being able to create *accessible documents* provides a great opportunity in the world of mathematics education. From my perspective as a *high school* teacher, beyond theorems and deep mathematics, the use of exercise lists is one of the most common things. Being able to open the way to work in parallel with those who have different abilities is really important and I regret not having looked into this in the past. I hope that enumext serves this purpose and inspires more users and authors to follow this path.

11 Change history

v2.0 (ctan), 2025-11-28
- Update requirement to multicol release 2025-10-21.

v1.9 (ctan), 2025-11-01
- Update requirement to LaTeX release 2025-11-01.
- Move \setcounter to \begin{list}{⟨arg one⟩}{⟨arg two⟩\setcounter}.
- Update code for *tagged* PDF.

v1.8 (ctan), 2025-10-04
- Replacing \scantokens (primitive) with \tl_retokenize:n.
- Cleanup warnings and details returned by expltools.

v1.7 (ctan), 2025-07-10
- Fixed \setenumext{enumext*}{resume}.
- Fixed bad interaction between \setenumext and the resume key.
- The behavior of the key resume* has been updated and documented.

v1.6 (ctan), 2025-07-04
- Syntax simplification for \setenumextmeta.
- Environments can be started with the key resume *without value*.
- Add \resetenumext, reset and reset* keys.
- The resume, resume* and series keys can now be set per level.
- Fixed bad interaction between \printkeyans and the resume, resume* keys.

v1.5 (ctan), 2025-06-11
- Replacing \regex_match: (deprecated) with \regex_if_match:.
- Add keys beginpenalty, midpenalty and endpenalty.

v1.4 (ctan), 2025-06-09
- Improved implementation of the start key for *tagged* PDF.
- Improved implementation of the ref key.
- Fixed the behavior of the save-sep key.
- Fixed the behavior of the resume* key.

v1.3 (ctan), 2025-06-01
- Removed dependency on the scontents package.
- The anskey* environment has been rewritten using the new c-type argument.

v1.2 (ctan), 2025-03-28
- Replace signature (prevent expansion for optional argument).
- Solve Inconsistent local/global assignment.

v1.1 (ctan), 2024-11-14
- Fixed implementation for font and base-fix keys.
- Added new keys for symbol marks.
- Update and improvements in the internal code.
- Adjustments in the documentation.

v1.0 (ctan), 2024-11-01
- First public release.

12 Index of Documentation

The italic numbers denote the pages where the corresponding entry is described.

13 Implementation

The most recent publicly released version of enumext is available at CTAN: https://www.ctan.org/pkg/enumext. While general feedback via email is welcomed, specific bugs or feature requests should be reported through the issue tracker: ⚬ https://github.com/pablgonz/enumext/issues.

💣 The documentation presented here is far from professional, it contains a lot of obvious information that to the eye of a TEXpert are superfluous, but, after so many years developing this project is the only way to remember what does what.

13.1 General conventions

Variables containing i, ii, iii and iv are associated by level with the enumext environment, variables containing v are associated with the keyans environment, variables containing vi are associated with the keyanspic environment, variables containing vii are associated with the enumext* environment and variables containing viii are associated with the keyans* environment.

To simplify writing and documentation some variables and functions that are common to the different levels of the environments are described using a capital "X".

The temporary function __enumext_tmp:n is used in different parts of the package code for variable creation or execution of other functions that are grouped into this one.

All variables and functions defined in this package are private and are NOT intended to work or be used by another package or module.

13.2 Initial set up

Start the DocStrip guards.

```
1  ⟨*package⟩
```

Identify the internal prefix (LaTeX3 DocStrip convention) for l3doc class.

```
2  ⟨@@=enumext⟩
```

13.3 Declaration of the package

First we will make sure we have a minimum (super updated) version of LaTeX to work correctly.

```
3  \NeedsTeXFormat{LaTeX2e}[2025-11-01]
```

Now declare the enumext package.

```
4  \ProvidesExplPackage {enumext} {2025-11-28} {2.0} {Enumerate exercise sheets}
```

Finally check if the multicol package are loaded, if not we load it.

```
5  \hook_gput_code:nnn {begindocument} {enumext}
6    {
7      \IfPackageLoadedTF { multicol }
8        {
9          \msg_info:nnn { enumext } { package-load } { multicol }
10       }
11       {
12         \msg_info:nnn { enumext } { package-not-load } { multicol }
13         \RequirePackage{multicol}[2025-10-21]
14       }
15   }
```

13.4 Definition of variables

Variables that do not appear in this section are created by means of \keys_define:nn or some function described below.

\l__enumext_level_int
\l__enumext_level_h_int
\l__enumext_anskey_level_int
\l__enumext_keyans_level_int
\l__enumext_keyans_level_h_int
\l__enumext_keyans_pic_level_int

Integer variables will control the nesting levels of the environments, anskey* environment and \anskey command.

```
16 \int_new:N  \l__enumext_level_int
17 \int_new:N  \l__enumext_level_h_int
18 \int_new:N  \l__enumext_anskey_level_int
19 \int_new:N  \l__enumext_keyans_level_int
20 \int_new:N  \l__enumext_keyans_level_h_int
21 \int_new:N  \l__enumext_keyans_pic_level_int
```

(*End of definition for* \l__enumext_level_int *and others.*)

Internal variables used by functions `\__enumext_is_not_nested:`, `\__enumext_is_on_first_level:` and `\__enumext_keyans_name_and_start:` (§13.5.1).

```
22  \bool_new:N \l__enumext_starred_bool
23  \bool_new:N \g__enumext_starred_bool
24  \bool_new:N \l__enumext_starred_first_bool
25  \bool_new:N \l__enumext_standar_bool
26  \bool_new:N \g__enumext_standar_bool
27  \bool_new:N \l__enumext_standar_first_bool
28  \bool_new:N \l__enumext_keyans_env_bool
29  \tl_new:N    \g__enumext_start_line_tl
30  \tl_new:N    \g__enumext_envir_name_tl
31  \tl_new:N    \l__enumext_envir_name_tl
```

(End of definition for `\l__enumext_starred_bool` and others.)

Variables to store the *"name of the counters"* enumXi, enumXii, enumXiii and enumXiv for enumext environment, enumXv for keyans environment and enumXvi for the keyanspic environment. The counters enumXvii and enumXviii are used by enumext* and keyans* environments.

The initial values of these variables are set by the function `\__enumext_define_counter:Nn` (§13.11) and then modified by the function `\__enumext_label_style:Nnn` used by label key (§13.14).

```
32  \cs_set_protected:Npn \__enumext_tmp:n #1
33    {
34      \tl_new:c { l__enumext_counter_#1_tl }
35    }
36  \clist_map_inline:nn { i, ii, iii, iv, v, vi, vii, viii } { \__enumext_tmp:n {#1} }
```

(End of definition for `\l__enumext_counter_i_tl` and others.)

Internal variables used by ref key (§13.14).

```
37  \tl_new:N \l__enumext_ref_key_arg_tl
38  \tl_new:N \l__enumext_ref_the_count_tl
39  \cs_set_protected:Npn \__enumext_tmp:n #1
40    {
41      \tl_new:c  { l__enumext_renew_counter_#1_tl }
42      \tl_new:c  { l__enumext_the_counter_#1_tl    }
43      \tl_set:ce { l__enumext_the_counter_#1_tl    } { \exp_not:c { theenumX#1 } }
44    }
45  \clist_map_inline:nn { i, ii, iii, iv, v, vi, vii, viii } { \__enumext_tmp:n {#1} }
```

(End of definition for `\l__enumext_ref_key_arg_tl` and others.)

Internal variables used by resume, resume* and series keys (§13.26).

```
46  \tl_new:N \l__enumext_series_name_tl
47  \bool_new:N \l__enumext_resume_count_bool
48  \cs_set_protected:Npn \__enumext_tmp:n #1
49    {
50      \bool_new:c { l__enumext_resume_count_#1_bool    }
51      \bool_new:c { l__enumext_resume_series_#1_bool   }
52      \bool_new:c { l__enumext_resume_star_key_#1_bool }
53      \tl_new:c   { g__enumext_resume_last_keys_#1_tl  }
54    }
55  \clist_map_inline:nn { i, ii, iii, iv, vii } { \__enumext_tmp:n {#1} }
```

(End of definition for `\l__enumext_series_name_tl` and others.)

The variable `\l__enumext_current_widest_dim` stores the current label width, the variable `\g__enumext_counter_styles_tl` stores the default ⟨*label style*⟩ and the variable `\g__enumext_widest_label_tl` the label width. These variables are used by widest (§13.15) and label (§13.13) keys.

```
56  \dim_new:N \l__enumext_current_widest_dim
57  \tl_new:N  \g__enumext_counter_styles_tl
58  \tl_new:N  \g__enumext_widest_label_tl
59  \box_new:N \l__enumext_label_width_by_box
```

(End of definition for `\l__enumext_current_widest_dim` and others.)

\l__enumext_leftmargin_tmp_X_bool
\l__enumext_leftmargin_tmp_X_dim
\l__enumext_leftmargin_X_dim
\l__enumext_itemindent_X_dim

The boolean variable \l__enumext_leftmargin_tmp_X_bool and the dimensional variable \l__enumext_-leftmargin_tmp_X_dim are used by the list-indent key (§13.19). The variables \l__enumext_-leftmargin_X_dim and \l__enumext_itemindent_X_dim are used and set by the function __enumext_-calc_hspace:NNNNNNNNNNNN (§13.41.1).

```
60  \cs_set_protected:Npn \__enumext_tmp:n #1
61    {
62      \bool_new:c { l__enumext_leftmargin_tmp_#1_bool }
63      \dim_new:c  { l__enumext_leftmargin_tmp_#1_dim  }
64      \dim_new:c  { l__enumext_leftmargin_#1_dim       }
65      \dim_new:c  { l__enumext_itemindent_#1_dim       }
66    }
67  \clist_map_inline:nn { i, ii, iii, iv, v, vi, vii, viii } { \__enumext_tmp:n {#1} }
```

(*End of definition for* \l__enumext_leftmargin_tmp_X_bool *and others.*)

\l__enumext_multicols_above_X_skip
\l__enumext_multicols_below_X_skip
\g__enumext_multicols_right_X_skip
\l__enumext_align_label_pos_X_str

Internal variables used by columns key (§13.23) and align key (§13.13).

```
68  \cs_set_protected:Npn \__enumext_tmp:n #1
69    {
70      \skip_new:c  { l__enumext_multicols_above_#1_skip }
71      \skip_new:c  { l__enumext_multicols_below_#1_skip }
72      \skip_new:c  { g__enumext_multicols_right_#1_skip }
73      \str_new:c   { l__enumext_align_label_pos_#1_str  }
74    }
75  \clist_map_inline:nn { i, ii, iii, iv, v } { \__enumext_tmp:n {#1} }
```

(*End of definition for* \l__enumext_multicols_above_X_skip *and others.*)

\g__enumext_minipage_stat_int
\l__enumext_minipage_temp_skip
\l__enumext_minipage_left_skip
\l__enumext_minipage_right_skip
\l__enumext_minipage_after_skip
\g__enumext_minipage_right_skip
\g__enumext_minipage_after_skip
\l__enumext_minipage_left_X_dim
\l__enumext_minipage_active_X_bool

Internal variables used by \miniright command (§13.24.4) and the keys mini-right, mini-right*, mini-env and mini-sep (§13.22, §13.24).

```
76  \int_new:N   \g__enumext_minipage_stat_int
77  \skip_new:N \l__enumext_minipage_temp_skip
78  \skip_new:N \l__enumext_minipage_left_skip
79  \skip_new:N \l__enumext_minipage_right_skip
80  \skip_new:N \l__enumext_minipage_after_skip
81  \skip_new:N \g__enumext_minipage_right_skip
82  \skip_new:N \g__enumext_minipage_after_skip
83  \cs_set_protected:Npn \__enumext_tmp:n #1
84    {
85      \dim_new:c  { l__enumext_minipage_left_#1_dim    }
86      \bool_new:c { l__enumext_minipage_active_#1_bool }
87    }
88  \clist_map_inline:nn { i, ii, iii, iv, v, vii, viii } { \__enumext_tmp:n {#1} }
```

(*End of definition for* \g__enumext_minipage_stat_int *and others.*)

\l__enumext_wrap_label_X_bool
\l__enumext_wrap_label_opt_X_bool
\l__enumext_start_X_int
\l__enumext_fake_item_indent_X_tl
\l__enumext_label_fill_left_X_tl
\l__enumext_label_fill_right_X_tl
\l__enumext_vspace_a_star_X_bool
\l__enumext_vspace_b_star_X_bool

The bool vars \l__enumext_wrap_label_X_bool and \l__enumext_wrap_label_opt_X_bool are used by wrap-label and wrap-label* keys (§13.13), the integer \l__enumext_start_X_int are used by the start and start* keys (§13.15), the token list \l__enumext_fake_item_indent_X_tl is used by itemindent key (§13.19.1), the variables \l__enumext_label_fill_left_X_tl and \l__enumext_-label_fill_left_X_tl are used by the align key (§13.13). The boolean vars \l__enumext_vspace_-a_star_X_bool, \l__enumext_vspace_b_star_X_bool are used by above, above*, below and below* keys (§13.21).

```
89   \cs_set_protected:Npn \__enumext_tmp:n #1
90     {
91       \bool_new:c { l__enumext_wrap_label_#1_bool      }
92       \bool_new:c { l__enumext_wrap_label_opt_#1_bool }
93       \int_new:c  { l__enumext_start_#1_int            }
94       \tl_new:c   { l__enumext_fake_item_indent_#1_tl }
95       \tl_new:c   { l__enumext_label_fill_left_#1_tl  }
96       \tl_new:c   { l__enumext_label_fill_right_#1_tl }
97       \bool_new:c { l__enumext_vspace_a_star_#1_bool  }
98       \bool_new:c { l__enumext_vspace_b_star_#1_bool  }
99     }
100  \clist_map_inline:nn { i, ii, iii, iv, v, vii, viii } { \__enumext_tmp:n {#1} }
```

(*End of definition for* \l__enumext_wrap_label_X_bool *and others.*)

`\l__enumext_store_active_bool`
`\l__enumext_store_name_tl`
`\g__enumext_store_name_tl`
`\l__enumext_store_current_label_tl`
`\l__enumext_store_current_opt_arg_tl`

The variable `\l__enumext_store_active_bool` setting by `save-ans` key (§13.29.1) activates all the mechanism related to `\anskey`, `anskey*`, `keyans`, `keyans*` and `keyanspic` environments.

The variable `\l__enumext_store_name_tl` saves the {⟨*store name*⟩} set by the `save-ans` key of the *sequence* and *prop list* in which we will store, the variable `\g__enumext_store_name_tl` it's just a global copy of {⟨*store name*⟩} used by different functions.

The variables `\l__enumext_store_current_label_tl` and `\l__enumext_store_current_opt_arg_tl` save the *current label* and *optional argument* of `\item*` (§13.40) and `\anspic*` (§13.45.2) for the `keyans`, `keyans*` and `keyanspic` environments.

```
101 \bool_new:N \l__enumext_store_active_bool
102 \tl_new:N   \l__enumext_store_name_tl
103 \tl_new:N   \g__enumext_store_name_tl
104 \tl_new:N   \l__enumext_store_current_label_tl
105 \tl_new:N   \l__enumext_store_current_opt_arg_tl
```

(*End of definition for* `\l__enumext_store_active_bool` *and others.*)

`\l__enumext_store_anskey_arg_tl`
`\l__enumext_store_anskey_env_tl`
`\l__enumext_write_anskey_env_bool`
`\l__enumext_write_anskey_env_file_name_tl`
`\l__enumext_write_anskey_env_file_iow`

The variable `\l__enumext_store_anskey_arg_tl` save the *argument* of `\anskey` (§13.33) and the variables `\l__enumext_store_anskey_env_tl` save the ⟨*body*⟩ of the environment `anskey*` (§13.34).

The variables `\l__enumext_write_anskey_env_bool`, `\l__enumext_write_anskey_env_file_name_tl` and `\l__enumext_write_anskey_env_file_iow` they are used by the `write-env` and `overwrite` keys in the `anskey*` environment implementation.

```
106 \tl_new:N   \l__enumext_store_anskey_arg_tl
107 \tl_new:N   \l__enumext_store_anskey_env_tl
108 \bool_new:N \l__enumext_write_anskey_env_bool
109 \tl_new:N   \l__enumext_write_anskey_env_file_name_tl
110 \iow_new:N  \l__enumext_write_anskey_env_file_iow
```

(*End of definition for* `\l__enumext_store_anskey_arg_tl` *and others.*)

`\c__enumext_anskey_env_hidden_space_str`

The `\c__enumext_anskey_env_hidden_space_str` is a constant *string* to used to hide the ⟨*forced space*⟩ added by TeX when recording content in a macro. This *string* contains the *reserved phrase* '`%^^Aenumextheol%`' which is added to the end of the argument stored in *sequence* and *prop list* when the key `force-eol` is false.

```
111 \str_const:Ne \c__enumext_anskey_env_hidden_space_str
112   { \c_percent_str \c_circumflex_str \c_circumflex_str A enumextheol \c_percent_str }
```

(*End of definition for* `\c__enumext_anskey_env_hidden_space_str`.)

`\l__enumext_setkey_tmpa_tl`
`\l__enumext_setkey_tmpb_tl`
`\l__enumext_setkey_tmpa_int`
`\l__enumext_setkey_tmpa_seq`
`\l__enumext_setkey_tmpb_seq`

Internal variables used by the command `\setenumext` (§13.51).

```
113 \tl_new:N  \l__enumext_setkey_tmpa_tl
114 \tl_new:N  \l__enumext_setkey_tmpb_tl
115 \int_new:N \l__enumext_setkey_tmpa_int
116 \seq_new:N \l__enumext_setkey_tmpa_seq
117 \seq_new:N \l__enumext_setkey_tmpb_seq
```

(*End of definition for* `\l__enumext_setkey_tmpa_tl` *and others.*)

`\l__enumext_meta_path_str`
`\l__enumext_foreach_print_seq`
`\l__enumext_foreach_name_prop_tl`
`\l__enumext_foreach_default_keys_tl`

Internal variables used by the `\setenumextmeta` command (§13.52) and `\foreachkeyans` command (§13.53).

```
118 \str_new:N \l__enumext_meta_path_str
119 \seq_new:N \l__enumext_foreach_print_seq
120 \tl_new:N  \l__enumext_foreach_name_prop_tl
121 \tl_new:N  \l__enumext_foreach_default_keys_tl
```

(*End of definition for* `\l__enumext_meta_path_str` *and others.*)

`\l__enumext_print_keyans_starred_tl`
`\l__enumext_print_keyans_star_bool`
`\l__enumext_print_keyans_cmd_bool`
`\l__enumext_mark_position_str`
`\l__enumext_mark_position_v_str`
`\l__enumext_mark_position_viii_str`
`\l__enumext_mark_sep_tmpa_dim`
`\l__enumext_mark_sep_tmpb_dim`
`\l__enumext_show_pos_tmp_int`
`\g__enumext_item_symbol_aux_tl`
`\l__enumext_print_keyans_X_tl`
`\l__enumext_store_save_key_X_tl`
`\l__enumext_store_save_key_X_bool`
`\l__enumext_store_upper_level_X_bool`

Internal variables used by command `\printkeyans` (§13.50), `show-pos`, `show-ans`, `mark-pos`, `mark-sep` keys (§13.30), `item-sym*` key (§13.38), `save-key` key (§13.30.3) and *"storing structure"*.

```
122 \tl_new:N   \l__enumext_print_keyans_starred_tl
123 \bool_new:N \l__enumext_print_keyans_star_bool
124 \bool_new:N \l__enumext_print_keyans_cmd_bool
125 \str_new:N  \l__enumext_mark_position_str
126 \str_new:N  \l__enumext_mark_position_v_str
127 \str_new:N  \l__enumext_mark_position_viii_str
128 \dim_new:N  \l__enumext_mark_sep_tmpa_dim
129 \dim_new:N  \l__enumext_mark_sep_tmpb_dim
130 \int_new:N  \l__enumext_show_pos_tmp_int
131 \tl_new:N   \g__enumext_item_symbol_aux_tl
132 \cs_set_protected:Npn \__enumext_tmp:n #1
133   {
134     \tl_new:c  { l__enumext_print_keyans_#1_tl        }
```

```

```

(*End of definition for* \l__enumext_item_starred_X_bool *and others.*)

\c__enumext_all_envs_clist   An internal clist-var variable to run with __enumext_tmp:n.

```
196 \clist_const:Nn \c__enumext_all_envs_clist
197   {
198     {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv},
199     {keyans}{v}, {enumext*}{vii}, {keyans*}{viii}
200   }
```

(*End of definition for* \c__enumext_all_envs_clist.)

13.5   Some utility functions

\keys_precompile:neN   Non-standard kernel variants used by the \printkeyans command (§13.50) and \foreachkeyans command
\seq_use:NV   (§13.53).

```
201 \cs_generate_variant:Nn \keys_precompile:nnN { neN }
202 \cs_generate_variant:Nn \seq_use:Nn { NV }
```

(*End of definition for* \keys_precompile:neN *and* \seq_use:NV.)

__enumext_at_begin_document:n   A internal *"hook"* function used for copying plain list and minipage environments definition and hyperref
detection.

```
203 \cs_new_protected:Npn \__enumext_at_begin_document:n #1
204   {
205     \hook_gput_code:nnn {begindocument} {enumext} { #1 }
206   }
```

(*End of definition for* __enumext_at_begin_document:n.)

__enumext_after_env:nn   A internal *"hook"* functions for execute code mini-right and mini-right* keys outside the enumext* and
__enumext_before_env:nn   keyans* environments and print check-ans outside the enumext and enumext* environments.

```
207 \cs_new_protected:Npn \__enumext_after_env:nn #1 #2
208   {
209     \hook_gput_code:nnn {env/#1/after} {enumext} {#2}
210   }
211 \cs_new_protected:Npn \__enumext_before_env:nn #1 #2
212   {
213     \hook_gput_code:nnn {env/#1/before} {enumext} {#2}
214   }
```

(*End of definition for* __enumext_after_env:nn *and* __enumext_before_env:nn.)

__enumext_level: Function for check current level in enumext.

```
215 \cs_new:Nn \__enumext_level:
216   {
217     \int_to_roman:n { \l__enumext_level_int }
218   }
```

(*End of definition for* __enumext_level:.)

__enumext_if_is_int:nT
__enumext_if_is_int:nF
__enumext_if_is_int:nTF

A conditional function to determine whether the variable we are passing is an integer used by start and widest keys. This function is taken directly from the answer given by Henri Menke in How to test if an expl3 function argument is an integer expression?.

```
219 \prg_new_protected_conditional:Npnn \__enumext_if_is_int:n #1 { T, F, TF }
220   {
221     \regex_if_match:nnTF { ^[\+\-]?[\d]+$ } {#1} % $
222       { \prg_return_true: }
223       { \prg_return_false: }
224   }
```

(*End of definition for* __enumext_if_is_int:nT, __enumext_if_is_int:nF, *and* __enumext_if_is_int:nTF.)

__enumext_show_length:nnn

Internal function used by show-length key to show *"all lengths"* calculated and used in enumext, enumext*, keyans and keyans* environments.

```
225 \cs_new:Npn \__enumext_show_length:nnn #1 #2 #3
226   {
227     *~#2
228     \prg_replicate:nn { 14 - \str_count:n {#2} } {~}
229       =~\use:c { #1_use:c } { l__enumext_#2_#3_#1 } \\
230   }
```

(*End of definition for* __enumext_show_length:nnn.)

__enumext_unskip_unkern:

The function __enumext_unskip_unkern: will remove the last ⟨*skip*⟩ or ⟨*kern*⟩ at execution time using the values 11 and 12 of \lastnodetype to apply \unskip or \unkern depending on the case.

```
231 \cs_new_protected:Nn \__enumext_unskip_unkern:
232   {
233     \int_case:nnT { \lastnodetype }
234       {
235         { 11 }{ \unskip }
236         { 12 }{ \unkern }
237       }
238   }
```

(*End of definition for* __enumext_unskip_unkern:.)

13.5.1 Utilities for environments and levels

__enumext_is_not_nested:
__enumext_is_on_first_level:

The function __enumext_is_not_nested: sets the variables \g__enumext_standar_bool and \g__enumext_starred_bool to *"true"* only if the environments enumext and enumext* are NOT nested in each other and saves the environment name in \l__enumext_envir_name_tl.

```
239 \cs_new_protected:Nn \__enumext_is_not_nested:
240   {
241     \str_case:en { \@currenvir }
242       {
243         {enumext}
244           {
245             \tl_set:Nn \l__enumext_envir_name_tl { enumext }
246             \bool_lazy_and:nnT
247               { \bool_not_p:n { \g__enumext_standar_bool } }
248               { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
249               {
250                 \bool_gset_true:N \g__enumext_standar_bool
251               }
252           }
253         {enumext*}
254           {
255             \tl_set:Nn \l__enumext_envir_name_tl { enumext* }
256             \bool_lazy_and:nnT
257               { \bool_not_p:n { \g__enumext_starred_bool } }
258               { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
259               {
260                 \bool_gset_true:N \g__enumext_starred_bool
261               }
262           }
263       }
264   }
```

The function `\__enumext_is_on_first_level:` will sets the variables `\l__enumext_standar_first_-bool` (§13.29.1), `\l__enumext_starred_first_bool` (§13.29.1) to *"true"* only if the environment is not nested and we are in the *"first level"* of it . We will also save the *start line number* of each environment in the variable `\g__enumext_start_line_tl` and the *name* of each environment in the variable `\g__enumext_-envir_name_tl` to use in messages related to the check-ans key and .log file.

```
265  \cs_new_protected:Nn \__enumext_is_on_first_level:
266    {
267      \bool_lazy_all:nT
268        {
269          { \bool_if_p:N \g__enumext_standar_bool }
270          { \int_compare_p:nNn { \l__enumext_level_int } = { 1 } }
271          { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
272        }
273        {
274          \bool_set_true:N \l__enumext_standar_first_bool
275          \tl_gset:Nn \g__enumext_envir_name_tl { enumext }
276          \tl_gset:Ne \g__enumext_start_line_tl
277            {
278              on~line~\exp_not:V \inputlineno
279            }
280        }
281      \bool_lazy_all:nT
282        {
283          { \bool_if_p:N \g__enumext_starred_bool }
284          { \int_compare_p:nNn { \l__enumext_level_h_int } = { 1 } }
285          { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
286        }
287        {
288          \bool_set_true:N \l__enumext_starred_first_bool
289          \tl_gset:Nn \g__enumext_envir_name_tl { enumext* }
290          \tl_gset:Ne \g__enumext_start_line_tl
291            {
292              on~line~\exp_not:V \inputlineno
293            }
294        }
295    }
```

(*End of definition for* `\__enumext_is_not_nested:` *and* `\__enumext_is_on_first_level:`.)

`\__enumext_keyans_name_and_start:` The function `\__enumext_keyans_name_and_start:` will save the start line number and name of the environments keyans, keyans* and keyanspic in the variables `\l__enumext_check_start_line_env_-tl` and `\l__enumext_envir_name_tl` to use in the `\__enumext_check_starred_cmd:n` function.

```
296  \cs_new_protected:Nn \__enumext_keyans_name_and_start:
297    {
298      \str_case:en { \@currenvir }
299        {
300          {keyans}
301            {
302              \tl_set:Nn \l__enumext_envir_name_tl { keyans }
303              \tl_set:Ne \l__enumext_check_start_line_env_tl
304                {

354        { \prop_count:c { g__enumext_ \g__enumext_store_name_tl _prop } }
355        { \seq_count:c { g__enumext_ \g__enumext_store_name_tl _seq } }
356        { \int_use:c { g__enumext_resume_ \g__enumext_store_name_tl _int } }
357   }
```

The function __enumext_log_answer_vars: will be passed to the function __enumext_execute_-
after_env: and write to the .log file the number of items and answers along with the difference between
them.

```
358 \cs_new_protected:Nn \__enumext_log_answer_vars:
359   {
360      \msg_log:nneee { enumext } { item-answer-hook }
361        { \int_use:N \g__enumext_item_number_int }
362        { \int_use:N \g__enumext_item_anskey_int }
363        { \int_eval:n { \g__enumext_item_number_int - \g__enumext_item_anskey_int} }
364   }
```

(*End of definition for __enumext_log_global_vars: and __enumext_log_answer_vars:.*)

13.6 Copying list and minipage environments

The list environment provided by LaTeX has the following plain form:

```
\list{⟨arg one⟩}{⟨arg two⟩}
  \item[⟨opt⟩]
\endlist
```

And minipage environment provided by LaTeX has the following (simplified) plain form:

```
\minipage[⟨pos⟩][⟨height⟩][⟨inner-pos⟩]{⟨width⟩}
  ⟨internal implement⟩
\endminipage
```

As a precaution we copy them using `\__enumext_at_begin_document:n` in case any package redefines the `list` environment or a related command.

🟢 For compatibility with *tagged* PDF we should use `\NewCommandCopy` and not `\cs_new_eq:NN` for `\item`. When *tagged* PDF is active `\item` is redefined using `ltcmd` (see `latex-lab-block`[19]).

`\__enumext_start_list:nn`
`\__enumext_stop_list:`
`\__enumext_item_std:w`
`\__enumext_minipage:w`
`\__enumext_endminipage:`

The functions `\__enumext_start_list:nn` and `\__enumext_stop_list:` correspond to copies of `\list` and `\endlist` from plain definition of `list` environment, the function `\__enumext_item_std:w` is a copy of the `\item` command.

```
365  \__enumext_at_begin_document:n
366    {
367       \cs_new_eq:NN    \__enumext_start_list:nn \list
368       \cs_new_eq:NN    \__enumext_stop_list: \endlist
369       \NewCommandCopy \__enumext_item_std:w \item
370    }
```

The functions `\__enumext_minipage:w` and `\__enumext_endminipage:` correspond to copies of `\minipage` and `\endminipage` from plain definition of `minipage` environment.

```
371  \__enumext_at_begin_document:n
372    {
373       \cs_new_eq:NN \__enumext_minipage:w \minipage
374       \cs_new_eq:NN \__enumext_endminipage: \endminipage
375    }
```

(*End of definition for* `\__enumext_start_list:nn` *and others.*)

13.7 Compatibility with hyperref and footnotehyper

`\__enumext_after_hyperref:`
`\__enumext_hypertarget:nn`
`\__enumext_phantomsection:`

First we define the necessary rules using *"hooks"* to determine if the `hyperref` package is loaded.

```
376  \hook_gput_code:nnn { begindocument } { enumext } { \__enumext_after_hyperref: }
377  \hook_gset_rule:nnnn { begindocument } { enumext } { after } { hyperref }
```

The function `\__enumext_after_hyperref:` sets the state of the boolean variable `\l__enumext_hyperref_bool` to "true" if the package is loaded. At this point we will use the public macro `\IfHyperBoolean` to determine if the `hyperfootnotes=true` key is present, if so, we set the state of the boolean variable `\__enumext_footnotes_key_bool` to "true".

```
378  \cs_new_protected:Nn \__enumext_after_hyperref:
379    {
380       \IfPackageLoadedT { hyperref }
381         {
382            \msg_info:nnn { enumext } { package-load } { hyperref }
383            \bool_set_true:N \l__enumext_hyperref_bool
384            \IfHyperBoolean{hyperfootnotes}
385              {
386                 \bool_set_true:N \l__enumext_footnotes_key_bool
387              }
388              {  }
389         }
```

If the state of the variable `\l__enumext_footnotes_key_bool` is true we will check if the package `footnotehyper` is loaded, in case it is not present, we will set the value of `\l__enumext_footnotes_key_bool` to false and we will redefine `\footnote`.

```
390       \bool_if:NT \l__enumext_footnotes_key_bool
391         {
392            \IfPackageLoadedTF { footnotehyper }
393              {
394                 \msg_info:nnn { enumext } { package-load } { footnotehyper }
395              }
396              {
397                 \bool_set_false:N \l__enumext_footnotes_key_bool
398              }
399         }
```

The functions `\__enumext_hypertarget:nn` and `\__enumext_phantomsection:` correspond to the internal copies of `\hypertarget` and `\phantomsection`. If the boolean variable `\l__enumext_hyperref_bool` is false the functions `\__enumext_hypertarget:nn` and `\__enumext_phantomsection:` will be disabled.

```
400       \bool_if:NTF \l__enumext_hyperref_bool
401         {
402            \cs_new_eq:NN \__enumext_hypertarget:nn \hypertarget
403            \cs_new_eq:NN \__enumext_phantomsection: \phantomsection
404         }
405         {
406            \cs_new_eq:NN \__enumext_hypertarget:nn \use_none:nn
```

```
407          \cs_new_eq:NN \__enumext_phantomsection: \prg_do_nothing:
408       }
409    }
```

(*End of definition for* __enumext_after_hyperref:, __enumext_hypertarget:nn, *and* __enumext_phantomsection:.)

__enumext_newlabel:nn   The function __enumext_newlabel:nn write the information to the .aux file when using the save-ref key. The arguments taken by the function are:

#1: \l__enumext_newlabel_arg_one_tl
#2: \l__enumext_newlabel_arg_two_tl

💣 The trick here is to manage the number of arguments passed to \newlabel{#1}{#2} according to the presence of the hyperref package.

```
410  \cs_new_protected:Npn \__enumext_newlabel:nn #1 #2
411    {
412       \protected@write \@auxout { }
413         {
414           \token_to_str:N \newlabel {#1}
415             {
416               {#2}
417               \bool_if:NT \l__enumext_hyperref_bool
418                 { { \thepage } {#2} {#1} }
419               { }
420             }
421         }
422       \__enumext_hypertarget:nn {#1} { }
423       \__enumext_phantomsection:
424    }
```

(*End of definition for* __enumext_newlabel:nn.)

13.8   Internal redefining \footnote **command**

To keep the correct numbering of \footnote and to make it work correctly in the enumext* and keyans* environments and mini-env key it is necessary to redefine the \footnote command. This implementation is adapted from the answer given by Clea F. Rees (@cfr) in footnotes in boxes compatible with hyperref.

__enumext_footnotetext:nn   Redefinition of the \footnote command using \footnotetext and \footnotemark for the mini-env key
__enumext_renew_footnote: in the enumext and keyans environments.
__enumext_print_footnote:

__enumext_renew_footnote_mini:
__enumext_print_footnote_mini:

```
425  \cs_new_protected:Nn \__enumext_footnotetext:nn
426    {
427       \footnotetext[#1]{#2}
428    }
429  \cs_new_protected:Nn \__enumext_renew_footnote:
430    {
431       \RenewDocumentCommand \footnote { o +m }
432         {
433           \tl_if_novalue:nTF {##1}
434             {
435               \stepcounter{footnote}
436               \int_gset_eq:Nc \g__enumext_footnote_standar_int { c@footnote }
437             }
438             {
439               \int_gset:Nn \g__enumext_footnote_standar_int { ##1 }
440             }
441           \footnotemark [ \g__enumext_footnote_standar_int ]
442           \seq_gput_right:Nn \g__enumext_footnote_standar_arg_seq { ##2 }
443           \seq_gput_right:NV
444             \g__enumext_footnote_standar_int_seq \g__enumext_footnote_standar_int
445         }
446    }
447  \cs_new_protected:Nn \__enumext_print_footnote:
448    {
449       \seq_if_empty:NF \g__enumext_footnote_standar_int_seq
450         {
451           \seq_map_pairwise_function:NNN
452             \g__enumext_footnote_standar_int_seq
453             \g__enumext_footnote_standar_arg_seq
454             \__enumext_footnotetext:nn
455         }
456       \seq_gclear:N \g__enumext_footnote_standar_arg_seq
457       \seq_gclear:N \g__enumext_footnote_standar_int_seq
458    }
```

The `enumext*` and `keyans*` environments are implemented using `minipage` so we must also redefine `\footnote` to keep these numbering as if it were part of the document.

```
459  \cs_new_protected:Nn \__enumext_renew_footnote_mini:
460    {
461      \RenewDocumentCommand \footnote { o +m }
462        {
463          \tl_if_novalue:nTF {##1}
464            {
465              \stepcounter{footnote}
466              \int_gset_eq:Nc \g__enumext_footnote_starred_int { c@footnote }
467            }
468            {
469              \int_gset:Nn \g__enumext_footnote_starred_int { ##1 }
470            }
471          \footnotemark [ \g__enumext_footnote_starred_int ]
472          \seq_gput_right:Nn \g__enumext_footnote_starred_arg_seq { ##2 }
473          \seq_gput_right:NV
474            \g__enumext_footnote_starred_int_seq \g__enumext_footnote_starred_int
475        }
476    }
477  \cs_new_protected:Nn \__enumext_print_footnote_mini:
478    {
479      \seq_if_empty:NF \g__enumext_footnote_starred_int_seq
480        {
481          \seq_map_pairwise_function:NNN
482            \g__enumext_footnote_starred_int_seq
483            \g__enumext_footnote_starred_arg_seq
484            \__enumext_footnotetext:nn
485        }
486      \seq_gclear:N \g__enumext_footnote_starred_arg_seq
487      \seq_gclear:N \g__enumext_footnote_starred_int_seq
488    }
```

(*End of definition for* `\__enumext_footnotetext:nn` *and others.*)

`\__enumext_renew_footnote_standar:`
`\__enumext_print_footnote_standar:`
`\__enumext_renew_footnote_starred:`
`\__enumext_print_footnote_starred:`

We encapsulate the redefinition of `\footnote` to pass it to internal `__enumext_mini_page` environment used by the `mini-env` key in the `enumext` and `keyans` environments. We will run the redefinition when *tagged* PDF is active or when the `footnotehyper` package is not loaded.

```
489  \cs_new_protected:Nn \__enumext_renew_footnote_standar:
490    {
491      \bool_if:NT \g__enumext_standar_bool
492        {
493          \IfDocumentMetadataTF
494            {
495              \__enumext_renew_footnote:
496            }
497            {
498              \bool_if:NF \l__enumext_footnotes_key_bool
499                {
500                  \__enumext_renew_footnote:
501                }
502            }
503        }
504    }
505  \cs_new_protected:Nn \__enumext_print_footnote_standar:
506    {
507      \bool_if:NT \g__enumext_standar_bool
508        {
509          \IfDocumentMetadataTF
510            {
511              \__enumext_print_footnote:
512            }
513            {
514              \bool_if:NF \l__enumext_footnotes_key_bool
515                {
516                  \__enumext_print_footnote:
517                }
518            }
519        }
520    }
```

We encapsulate the redefinition of \footnote to pass it to the enumext* and keyans* environments. We will run the redefinition when *tagged* PDF is active or when the footnotehyper package is not loaded.

```
521  \cs_new_protected:Nn \__enumext_renew_footnote_starred:
522    {
523      \IfDocumentMetadataTF
524        {
525          \__enumext_renew_footnote_mini:
526        }
527        {
528          \bool_if:NF \l__enumext_footnotes_key_bool
529            {
530              \__enumext_renew_footnote_mini:
531            }
532        }
533    }
534  \cs_new_protected:Nn \__enumext_print_footnote_starred:
535    {
536      \IfDocumentMetadataTF
537        {
538          \__enumext_print_footnote_mini:
539        }
540        {
541          \bool_if:NF \l__enumext_footnotes_key_bool
542            {
543              \__enumext_print_footnote_mini:
544            }
545        }
546    }
```

In enumext* and keyans* environments we need to use *"hooks"* to print \footnote with support for *tagged* PDF.

```
547  \__enumext_after_env:nn { enumext* }
548    {
549      \__enumext_print_footnote_starred:
550    }
551  \__enumext_after_env:nn { keyans* }
552    {
553      \__enumext_print_footnote_starred:
554    }
```

(*End of definition for* __enumext_renew_footnote_standar: *and others.*)

13.9 The internal minipage environment

__enumext_internal_mini_page:
__enumext_mini_env*

The function __enumext_internal_mini_page: creates a internal __enumext_mini_page environment (*custom version* of minipage) setting the \if@minipage switch to *"false"* to allow spaces at the *"above"* of the environment, plus we will add \skip_vertical:N \c_zero_skip to maintain alignment on *"top"* in the first part and \skip_vertical:N \c_zero_skip in the second part to allow spaces *"below"*. This environment will be used internally by the mini-env key, it is NOT documented in the user interface and is for internal use only. Within this environment we redefine \footnote to make them look the same as if they were elsewhere in the document. This implementation is adapted from the answer given by Max Chernoff (@MaxChernoff) in Customize minipage to support spaces below it.

💣 This function is passed to the function __enumext_safe_exec: in the enumext environment definition (§13.42) and __enumext_safe_exec_vii: in the enumext* environment definition (§13.47).

```
555  \cs_new_protected:Nn \__enumext_internal_mini_page:
556    {
557      \int_compare:nNnT { \l__enumext_level_int } = { 0 }
558        {
559          \DeclareDocumentEnvironment{__enumext_mini_page}{ m }
560            {
561              \__enumext_renew_footnote_standar:
562              \__enumext_minipage:w [ t ] { ##1 }
563                \legacy_if_gset_false:n { @minipage }
564                \skip_vertical:N \c_zero_skip
565            }
566            {
567              \skip_vertical:N \c_zero_skip
568              \__enumext_endminipage:
569              \__enumext_print_footnote_standar:
570            }
571        }
```

```
572        }
```

(*End of definition for* `\__enumext_internal_mini_page:` *and* `__enumext_mini_env*`.)

13.10   Definition of public dimension

The package enumext only provides a single public dimension `\itemwidth` and is intended for user convenience only and is not for internal use as such. This dimension is set in all environments and is only used by the wrap-ans key at its default value.

```
573  \dim_zero_new:N \itemwidth
```

13.11   Definition of counters

`\__enumext_define_counter:Nn`
enumXi
enumXii
enumXiii
enumXiv
enumXv
enumXvi
enumXvii
enumXviii

To create the necessary *"counters"* we must first make sure that they are not already defined by the user or a package such as enumitem, otherwise a error will be returned and the package loading will be aborted. The arguments taken by the function are:

#1 :   A token list `\l__enumext_counter_X_tl` for *"store"* the counter's name.

#2 :   The counter's name.

```
574  \cs_new_protected:Npn \__enumext_define_counter:Nn #1 #2
575    {
576      \cs_if_exist:cTF { c@ #2 }
577        { \msg_fatal:nnn { enumext } { counters }{ #2 } }
578        {
579          \tl_set:Nn #1 { #2 }
580          \newcounter { #2 }
581        }
582    }
```

The counters created here are enumXi, enumXii, enumXiii and enumXiv for enumext environment, enumXv for keyans environment, enumXvi for keyanspic environment, enumXvii for enumext* and enumXviii for the keyans* environments.

```
583  \__enumext_define_counter:Nn \l__enumext_counter_i_tl     { enumXi     }
584  \__enumext_define_counter:Nn \l__enumext_counter_ii_tl    { enumXii    }
585  \__enumext_define_counter:Nn \l__enumext_counter_iii_tl   { enumXiii   }
586  \__enumext_define_counter:Nn \l__enumext_counter_iv_tl    { enumXiv    }
587  \__enumext_define_counter:Nn \l__enumext_counter_v_tl     { enumXv     }
588  \__enumext_define_counter:Nn \l__enumext_counter_vi_tl    { enumXvi    }
589  \__enumext_define_counter:Nn \l__enumext_counter_vii_tl   { enumXvii   }
590  \__enumext_define_counter:Nn \l__enumext_counter_viii_tl  { enumXviii  }
```

(*End of definition for* `\__enumext_define_counter:Nn` *and others.*)

`\c@__enumext_resume_i_int`
`\c@__enumext_resume_ii_int`
`\c@__enumext_resume_iii_int`
`\c@__enumext_resume_iv_int`
`\c@__enumext_resume_vii_int`

In version 1.6 the command `\resetenumext` (§13.27) was added which internally uses `\counterwithin*` so for its correct operation, we will create *"real counters"* instead of the *"integer variables"* for the keys resume and resume*.

```
591  \cs_set_protected:Npn \__enumext_tmp:n #1
592    {
593      \cs_if_exist:cTF { c@ __enumext_resume_#1_int }
594        { \msg_fatal:nne { enumext } { counters }{ __enumext_resume_#1_int } }

596          \newcounter { __enumext_resume_#1_int }
597        }
598    }
599  \clist_map_inline:nn {i,ii,iii,iv,vii} { \__enumext_tmp:n {#1} }
```

(*End of definition for* `\c@__enumext_resume_i_int` *and others.*)

13.12   Definition of labels

This part of the code is inspired by the enumitem package. The idea is to be able to access the counters using `\arabic*`, `\Alph*`, `\alph*`, `\Roman*` and `\roman*` to use them in the label key.

🎯 Direct support for this is provided since LaTeX release 2025-06-01[13], but we will keep the original implementation so as not to hinder the internal *"label and ref"* system.

`\__enumext_register_default_label_wd:Nn`

These ⟨*counters*⟩ will be used as default ⟨*labels*⟩ if the label key is not used for the different levels of the enumext, enumext*, keyans and keyans* environments, so it is necessary to get a default value for labelwidth from these ⟨*labels*⟩ at the same time.

```
600  \cs_new_protected:Npn \__enumext_register_default_label_wd:Nn #1 #2
601    {
602      \tl_const:cn { c__enumext_widest_ \cs_to_str:N #1 _tl } {#2}
603      \tl_gput_right:Nn \g__enumext_counter_styles_tl {#1}
```

```
604    }
605  \__enumext_register_default_label_wd:Nn \arabic  { 0 }
606  \__enumext_register_default_label_wd:Nn \Alph    { M }
607  \__enumext_register_default_label_wd:Nn \alph    { m }
608  \__enumext_register_default_label_wd:Nn \Roman   { VIII }
609  \__enumext_register_default_label_wd:Nn \roman   { viii }
```

(*End of definition for* __enumext_register_default_label_wd:Nn.)

__enumext_label_width_by_box:Nn
__enumext_label_width_by_box:cv

The function __enumext_label_width_by_box:Nn set the default \labelwidth using a box width if no labelwidth key is passed.

```
610  \cs_new_protected:Npn \__enumext_label_width_by_box:Nn #1 #2
611    {
612      \hbox_set:Nn \l__enumext_label_width_by_box {#2}
613      \dim_set:Nn #1 { \box_wd:N \l__enumext_label_width_by_box }
614    }
615  \cs_generate_variant:Nn \__enumext_label_width_by_box:Nn { cv }
```

(*End of definition for* __enumext_label_width_by_box:Nn.)

__enumext_label_style:Nnn
__enumext_label_style:cvn

The function __enumext_label_style:Nnn is used by the label key to creates the variables containing the ⟨*label style*⟩ and will allow to use \arabic*, \Alph*, \alph*, \Roman* and \roman* as arguments. It loops through the defined counter styles in \g__enumext_counter_styles_tl (\arabic, \alph, \Alph, \roman and \Roman) for example, looking for \roman* and replacing that by \roman{⟨*counter*⟩}, and doing the same for the \g__enumext_widest_label_tl to keep both in sync.

```
616  \cs_new_protected:Npn \__enumext_label_style:Nnn #1 #2 #3
617    {
618      \tl_clear_new:N #1
619      \tl_put_right:Ne #1 { \tl_trim_spaces:n {#3} }
620      \tl_gset_eq:NN \g__enumext_widest_label_tl #1
621      \tl_map_inline:Nn \g__enumext_counter_styles_tl
622        {
623          \tl_replace_all:Nne #1 { ##1* } { \exp_not:N ##1 {#2} }
624          \tl_greplace_all:Nne \g__enumext_widest_label_tl { ##1* }
625            { \tl_use:c { c__enumext_widest_ \cs_to_str:N ##1 _tl } }
626        }
627      \__enumext_label_width_by_box:Nn \l__enumext_current_widest_dim
628        { \tl_use:N \g__enumext_widest_label_tl }
629      \tl_set_eq:cN { the #2 } #1
630    }
631  \cs_generate_variant:Nn \__enumext_label_style:Nnn { cvn }
```

(*End of definition for* __enumext_label_style:Nnn.)

13.13   Setting keys associated with label

When *tagged* PDF is active \makelabel is redefined using \makebox to work correctly (§13.37). From the user side it is convenient to have a key that allows using this redefinition with \makebox without having \IfDocumentMetadataTF active.

mode-box

We define the key mode-box only for the *"first level"* of enumext and enumext* environments.

```
632  \cs_set_protected:Npn \__enumext_tmp:n #1
633    {
634      \keys_define:nn { enumext /  #1 }
635        {
636          mode-box .bool_set:N = \l__enumext_mode_box_bool,
637          mode-box .initial:n  = false,
638          mode-box .value_forbidden:n = true,
639        }
640    }
641  \clist_map_inline:nn { level-1, enumext* } { \__enumext_tmp:n {#1} }
```

(*End of definition for* mode-box.)

font
labelsep
labelwidth
wrap-label
wrap-label*

Definition of keys font, labelsep, labelwidth, wrap-label and wrap-label* keys for enumext and keyans environments.

```
642  \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
643    {
644      \keys_define:nn { enumext / #1 }
645        {
646          font        .tl_set:c   = { l__enumext_label_font_style_#2_tl },
```

```
647              font        .value_required:n = true,
648              labelsep    .dim_set:c  = { l__enumext_labelsep_#2_dim },
649              labelsep    .initial:n  = {0.3333em},
650              labelsep    .value_required:n = true,
651              labelwidth  .dim_set:c  = { l__enumext_labelwidth_#2_dim },
652              labelwidth  .value_required:n = true,
653              wrap-label  .cs_set_protected:cp = { __enumext_wrapper_label_#2:n } ##1,
654              wrap-label  .initial:n  = {##1},
655              wrap-label  .value_required:n = true,
656              wrap-label* .code:n = {
657                                     \bool_set_true:c { l__enumext_wrap_label_opt_#2_bool }
658                                     \keys_set:nn { enumext / #1 } { wrap-label = {##1} }
659                                   },
660              wrap-label* .value_required:n = true,
661          }
662      }
663  \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(*End of definition for* font *and others.*)

align   The align key is implemented differently for *"starred"* and *"non starred"* environments. For compatibility
with *tagged* PDF we must set \l__enumext_align_label_pos_X_str.

```
664  \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
665    {
666      \keys_define:nn { enumext / #1 }
667        {
668          align .choice:,
669          align / left     .code:n =
670                              {
671                                \tl_clear:c { l__enumext_label_fill_left_#2_tl  }
672                                \tl_set:cn  { l__enumext_label_fill_right_#2_tl } { \hfill }
673                                \str_set:cn { l__enumext_align_label_pos_#2_str } { l }
674                              },
675          align / right    .code:n =
676                              {
677                                \tl_set:cn  { l__enumext_label_fill_left_#2_tl  } { \hfill }
678                                \tl_clear:c { l__enumext_label_fill_right_#2_tl }
679                                \str_set:cn { l__enumext_align_label_pos_#2_str } { r }
680                              },

```

(*End of definition for* align.)

13.14 Setting label and ref keys

The implementation of the keys label and ref are part of the core of the package enumext, here the default values for ⟨*label*⟩, the value of the variables \l__enumext_label_X_tl, the default values for \labelwidth and the "*label and ref*" system.

13.14.1 Define and set label and ref keys for enumext environment

label
ref
\l__enumext_label_i_tl
\l__enumext_label_ii_tl
\l__enumext_label_iii_tl
\l__enumext_label_iv_tl

Here we set the default ⟨*labels*⟩ of the *four levels* of enumext environment, along with the default value for labelwidth key and ref key.

```
715  \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
716    {
717      \keys_define:nn { enumext / #1 }
718        {
719          label .code:n    = {
720                              \__enumext_label_style:cvn { l__enumext_label_#2_tl }
721                                { l__enumext_counter_#2_tl } {##1}
722                              \dim_set_eq:cN  { l__enumext_labelwidth_#2_dim }
723                                \l__enumext_current_widest_dim
724                            },
725          label .initial:n = #3,
726          label .value_required:n = true,
727          ref   .code:n    = \__enumext_standar_ref:n {##1},
728          ref   .value_required:n = true,
729        }
730    }
731  \__enumext_tmp:nnn { level-1 } {   i } { \arabic*.}
732  \__enumext_tmp:nnn { level-2 } {  ii } { (\alph*) }
733  \__enumext_tmp:nnn { level-3 } { iii } { \roman*. }
734  \__enumext_tmp:nnn { level-4 } {  iv } { \Alph*.  }
```

(*End of definition for* label *and others.*)

__enumext_standar_ref:n
__enumext_standar_ref:

The __enumext_standard_ref:n function will first pass the key *argument* ref to the variable \l__enumext_ref_key_arg_tl and analyze its state, if it is not *empty* it will set a copy of of the *current counter style* save in \l__enumext_the_counter_X_tl to \l__enumext_ref_the_count_tl and then set the variable \l__enumext_renew_counter_X_tl which will modify \theenumX.

```
735  \cs_new_protected:Npn \__enumext_standar_ref:n #1
736    {
737      \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
738      \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
739        {
740          \msg_error:nnn { enumext } { key-ref-empty } { enumext }
741        }
742        {
743          \tl_set_eq:Nc \l__enumext_ref_the_count_tl
744            {
745              l__enumext_the_counter_ \__enumext_level: _tl
746            }
747          \tl_set:ce { l__enumext_renew_counter_ \__enumext_level: _tl }
748            {
749              \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl }
750                { \exp_not:V \l__enumext_ref_key_arg_tl }
751            }
752        }
753    }
```

Finally the function __enumext_standar_ref: will execute the modification for the reference system in the second argument of the environment definition enumext.

```
754  \cs_new_protected:Nn \__enumext_standar_ref:
755    {
756      \tl_if_empty:cF { l__enumext_renew_counter_ \__enumext_level: _tl }
757        {
758          \tl_use:c { l__enumext_renew_counter_ \__enumext_level: _tl }
759        }
760    }
```

(*End of definition for* __enumext_standar_ref:n *and* __enumext_standar_ref:.)

13.14.2 Define and set `label` and `ref` keys for `enumext*` and `keyans*` environments

label

ref

\l__enumext_label_vii_tl

\l__enumext_label_viii_tl

Here we set the default ⟨*labels*⟩ for `enumext*` and `keyans*` environments, along with the default value for `labelwidth` key and `ref` key.

```
761 \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
762   {
763     \keys_define:nn { enumext / #1 }
764       {
765         label .code:n    = {
766                             \__enumext_label_style:cvn { l__enumext_label_#2_tl }
767                               { l__enumext_counter_#2_tl } {##1}
768                             \dim_set_eq:cN  { l__enumext_labelwidth_#2_dim }
769                               \l__enumext_current_widest_dim
770                           },
771         label .initial:n = #3,
772         label .value_required:n = true,
773         ref   .code:n    = \__enumext_starred_ref:n {##1},
774         ref   .value_required:n = true,
775       }
776   }
777 \__enumext_tmp:nnn { enumext* } {  vii } { \arabic*.}
778 \__enumext_tmp:nnn { keyans*  } { viii } { \Alph*) }
```

(*End of definition for* label *and others.*)

__enumext_starred_ref:n

__enumext_starred_ref:

The implementation of `\__enumext_starred_ref:n` is the same as that used for the environment `enumext`.

```
779 \cs_new_protected:Npn \__enumext_starred_ref:n #1
780   {
781     \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
782     \int_compare:nNnT { \l__enumext_level_h_int } = { 1 }
783       {
784         \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
785           {
786             \msg_error:nnn { enumext } { key-ref-empty } { enumext* }
787           }
788           {
789             \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_vii_tl
790             \tl_set:Ne \l__enumext_renew_counter_vii_tl
791               {
792                 \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl } { \exp_not:V
793               }
794           }
795       }
796     \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
797       {
798         \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
799           {
800             \msg_error:nnn { enumext } { key-ref-empty } { keyans* }
801           }
802           {
803             \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_viii_tl
804             \tl_set:Ne \l__enumext_renew_counter_viii_tl
805               {
806                 \exp_not:N \renewcommand  { \exp_not:V \l__enumext_ref_the_count_tl } { \exp_not:V
807               }
808           }
809       }
810   }
```

Finally the function `\__enumext_starred_ref:` will execute the modification for the reference system in the second argument of the `enumext*` and `keyans*` environment definition.

```
811 \cs_new_protected:Nn \__enumext_starred_ref:
812   {

(*End of definition for* __enumext_starred_ref:n *and* __enumext_starred_ref:.)

13.14.3 Define and set `label` and `ref` keys for `keyans` and `keyanspic` environments

label
ref
\l__enumext_label_v_tl
\l__enumext_label_vi_tl

Here we set the default ⟨*label*⟩ for `keyans` and `keyanspic` environment, along with the default value for `labelwidth` if it has not been established and `ref` key. The `keyanspic` environment use the same ⟨*label*⟩ as the `keyans` environment.

```
828  \keys_define:nn { enumext / keyans }
829    {
830      label .code:n    = {
831                          \__enumext_label_style:cvn { l__enumext_label_v_tl }
832                            { l__enumext_counter_v_tl } {#1}
833                          \__enumext_label_style:cvn { l__enumext_label_vi_tl }
834                            { l__enumext_counter_vi_tl } {#1}
835                          \dim_set_eq:NN
836                            \l__enumext_labelwidth_v_dim \l__enumext_current_widest_dim
837                        },
838      label .initial:n = \Alph*),
839      label .value_required:n = true,
840      ref    .code:n    = \__enumext_keyans_ref:n {#1},
841      ref    .value_required:n = true,
842    }
```

(*End of definition for* `label` *and others.*)

__enumext_keyans_ref:n
__enumext_keyans_ref:

The implementation of __enumext_keyans_ref:n is the same as that used for the environment `enumext`.

```
843  \cs_new_protected:Npn \__enumext_keyans_ref:n #1
844    {
845      \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
846      \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
847        {
848          \msg_error:nnn { enumext } { key-ref-empty } { keyans }
849        }
850        {
851          \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_v_tl
852          \tl_put_right:Ne \l__enumext_renew_counter_v_tl
853            {
854              \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl } { \exp_not:V \l_
855            }
856        }
857    }
```

Finally the function __enumext_keyans_ref: will execute the modification for the reference system in the second argument of the `keyans*` environment definition.

```
858  \cs_new_protected:Nn \__enumext_keyans_ref:
859    {
860      \tl_if_empty:NF \l__enumext_renew_counter_v_tl
861        {
862          \tl_use:N \l__enumext_renew_counter_v_tl
863        }
864    }
```

(*End of definition for* __enumext_keyans_ref:n *and* __enumext_keyans_ref:.)

13.15 Setting `start`, `start*` and `widest` keys

__enumext_start_from:NNn
__enumext_start_from:ccn
__enumext_start_from:cce

The function __enumext_start_from:NNn used by `start` and `start*` keys take three arguments:

#1: \l__enumext_label_X_tl
#2: \l__enumext_start_X_int
#3: ⟨*integer or string*⟩

The first argument of this function are the *"counter style"* set by `label` key, the second argument is returned by the function, the third argument can be an ⟨*integer*⟩ or ⟨*string*⟩ of the form \Alph, \alph, \Roman or \roman. This effectively allows `start*=A` or `start=1` to be used.

🖈 In version 1.6 it is allowed to pass the `resume` key *without value* by means of the command `\setenumext`, for the correct operation of this we must set the boolean variable `\l__enumext_resume_count_bool` set by the `resume` key *without value* to *"false"* (§13.26). This is necessary to be able to "reset" the *start value* by means of the `start` or `start*` keys.

```
865 \cs_new_protected:Npn \__enumext_start_from:NNn #1 #2 #3
866   {
867     \bool_set_false:N \l__enumext_resume_count_bool
868     \__enumext_if_is_int:nTF { #3 }
869       {
870         \int_set:Nn #2 {#3}
871       }
872       {
873         \regex_if_match:nVT { \c{Alph} | \c{alph} } #1
874           { \int_set:Nn #2 { \int_from_alph:n {#3} } }
875         \regex_if_match:nVT { \c{Roman} | \c{roman} } #1
876           { \int_set:Nn #2  { \int_from_roman:n {#3} } }
877       }
878   }
879 \cs_generate_variant:Nn \__enumext_start_from:NNn { ccn, cce }
```

(*End of definition for* `\__enumext_start_from:NNn`.)

`\__enumext_widest_from:nNNn`
`\__enumext_widest_from:nccn`
The function `\__enumext_widest_from:nNNn` used by the `widest` key take four arguments:

`#1`: The counter associated with the environment level
`#2`: `\l__enumext_label_X_tl`
`#3`: `\l__enumext_labelwidth_X_dim`
`#4`: ⟨*integer or string*⟩

The second and third arguments of this function are the values set by `label` and `labelwidth` keys, the four argument can be an ⟨*integer*⟩ or ⟨*string*⟩ of the form `\Alph`, `\alph`, `\Roman` or `\roman`. The value of the four argument is set temporarily for the identified counter in this point (level), then the value is expanded into a *"box"* and the *"width"* of the *"box"* is returned.

```
880 \cs_new_protected:Npn \__enumext_widest_from:nNNn #1 #2 #3 #4
881   {
882     \__enumext_if_is_int:nTF {#4}
883       {
884         \setcounter{enumX#1} { #4 }
885       }
886       {
887         \regex_if_match:nVT { \c{Alph} | \c{alph} } #2
888           { \setcounter{enumX#1} { \int_from_alph:n {#4} } }
889         \regex_if_match:nVT { \c{Alph} | \c{alph} } #2
890           { \setcounter{enumX#1} { \int_from_roman:n {#4} } }
891       }
892     \__enumext_label_width_by_box:cv
893       { l__enumext_labelwidth_#1_dim } { l__enumext_label_#1_tl }
894   }
895 \cs_generate_variant:Nn \__enumext_widest_from:nNNn { nccn }
```

(*End of definition for* `\__enumext_widest_from:nNNn`.)

start
start*
widest
Now define and set `start*`, `start` and `widest` keys for `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```
896 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
897   {
898     \keys_define:nn { enumext / #1 }
899       {
900         start* .code:n    = {
901                             \__enumext_start_from:ccn
902                               { l__enumext_label_#2_tl }
903                               { l__enumext_start_#2_int } {##1}
904                           },
905         start* .value_required:n = true,
906         start  .code:n    = {
907                             \__enumext_start_from:cce
908                               { l__enumext_label_#2_tl }
909                               { l__enumext_start_#2_int } { \int_eval:n {##1} }
910                           },
911         start  .initial:n = 1,
912         start  .value_required:n = true,
913         widest .code:n    = {
```

```
914                                    \__enumext_widest_from:nccn {#2}
915                                      { l__enumext_label_#2_tl }
916                                      { l__enumext_labelwidth_#2_dim } {##1}
917                              },
918              widest .value_required:n = true,
919          }
920    }
921 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(*End of definition for* start *,* start* *, and* widest*.*)

13.16 Setting keys for penaltys

beginpenalty
midpenalty
endpenalty

The three parameters \@beginparpenalty, \@itempenalty and \@endparpenalty work together to ensure that list environments look good, avoiding unsightly page breaks that can break the flow of the list, so it's a good idea to have a ⟨*keys*⟩ to access these.

```
922 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
923    {
924      \keys_define:nn { enumext / #1 }
925        {
926          beginpenalty .int_set:c = { l__enumext_beginparpenalty_#2_int },
927          beginpenalty .initial:n = -51,
928          beginpenalty .value_required:n = true,
929          midpenalty   .int_set:c = { l__enumext_itempenalty_#2_int },
930          midpenalty   .initial:n = -51,
931          midpenalty   .value_required:n = true,
932          endpenalty   .int_set:c = { l__enumext_endparpenalty_#2_int },
933          endpenalty   .initial:n = -51,
934          endpenalty   .value_required:n = true,
935        }
936    }
937 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(*End of definition for* beginpenalty *,* midpenalty *, and* endpenalty*.*)

13.17 Setting keys for vertical spaces

topsep
partopsep
parsep
noitemsep
nosep

Define and set topsep, partopsep, parsep, itemsep, noitemsep and nosep keys for enumext, enumext*, keyans and keyans* environments.

```
938 \cs_set_protected:Npn \__enumext_tmp:nnnnnn #1 #2 #3 #4 #5 #6
939    {
940      \keys_define:nn { enumext / #1 }
941        {
942          topsep    .skip_set:c = { l__enumext_topsep_#2_skip },
943          topsep    .initial:n  = {#3},
944          topsep    .value_required:n = true,
945          partopsep .skip_set:c = { l__enumext_partopsep_#2_skip },
946          partopsep .initial:n  = {#4},
947          partopsep .value_required:n = true,
948          parsep    .skip_set:c = { l__enumext_parsep_#2_skip },
949          parsep    .initial:n  = {#5},
950          parsep    .value_required:n = true,
951          itemsep   .skip_set:c = { l__enumext_itemsep_#2_skip },
952          itemsep   .initial:n  = {#6},
953          itemsep   .value_required:n = true,
954          noitemsep .meta:n     = { itemsep = 0pt, parsep = 0pt },
955          noitemsep .value_forbidden:n = true,
956          nosep     .meta:n     = {
957                                    itemsep = 0pt, parsep= 0pt,
958                                    topsep = 0pt, partopsep = 0pt,
959                                  },
960          nosep     .value_forbidden:n = true,
961        }
962    }
```

Now we set the values based on standard article class in 10pt.

```
963 \__enumext_tmp:nnnnnn { level-1 } { i } { 8.0pt plus 2.0pt minus 4.0pt }
964    { 2.0pt plus 1.0pt minus 1.0pt } { 4.0pt plus 2.0pt minus 1.0pt }
965    { 4.0pt plus 2.0pt minus 1.0pt }
966 \__enumext_tmp:nnnnnn { level-2 } { ii } { 4.0pt plus 2.0pt minus 1.0pt }
967    { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
968    { 2.0pt plus 1.0pt minus 1.0pt }
```

```
969  \__enumext_tmp:nnnnnn { level-3 } { iii } { 2.0pt plus 1.0pt minus 1.0pt }
970    { 1.0pt minus 1.0pt }{ 0pt }{ 2.0pt plus 1.0pt minus 1.0pt }
971  \__enumext_tmp:nnnnnn { level-4 } { iv } { 2.0pt plus 1.0pt minus 1.0pt }
972    { 1.0pt minus 1.0pt }{ 0pt }{ 2.0pt plus 1.0pt minus 1.0pt }
973  \__enumext_tmp:nnnnnn { keyans  } { v }{ 4.0pt plus 2.0pt minus 1.0pt }
974    { 2.0pt plus 1.0pt minus 1.0pt }{ 2.0pt plus 1.0pt minus 1.0pt }
975    { 2.0pt plus 1.0pt minus 1.0pt }
976  \__enumext_tmp:nnnnnn { enumext* } { vii } { 8.0pt plus 2.0pt minus 4.0pt }
977    { 2.0pt plus 1.0pt minus 1.0pt } { 4.0pt plus 2.0pt minus 1.0pt }
978    { 4.0pt plus 2.0pt minus 1.0pt }
979  \__enumext_tmp:nnnnnn { keyans* } { viii } { 4.0pt plus 2.0pt minus 1.0pt }
980    { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
981    { 2.0pt plus 1.0pt minus 1.0pt }
```

(*End of definition for* topsep *and others.*)

13.18   Setting `base-fix` key

When nesting starting right after \item (without material between them) there is a problem with the alignment of the *baseline* between the two environments. One way to get around this problem is to place \mode_leave_vertical: apply \vspace{-\baselineskip} and set \topsep=0pt for the *"first level"* of the nested enumext environment.

base-fix
__enumext_nested_base_line_fix:

We define the key base-fix only for the *"first level"* of enumext environment.

```
982  \keys_define:nn { enumext /  level-1 }
983    {
984      base-fix .bool_set:N = \l__enumext_base_line_fix_bool,
985      base-fix .initial:n  = false,
986      base-fix .value_forbidden:n = true,
987    }
```

The function __enumext_nested_base_line_fix: passed to the __enumext_parse_keys:n function in the definition of the enumext environment (§13.42) will be responsible for applying the *baseline correction* and adjusting the ⟨*keys*⟩ for the enumext environment and the \printkeyans with *starred argument* '*' (§13.50).

We will first implement the function code from the user side of the base-fix key, that is, only the user knows when it is necessary to apply it within the document in which case the variable \l__enumext_print_-keyans_star_bool set by the \printkeyans command is false and the variable \l__enumext_base_-line_fix_bool is true.

We set the values of the keys topsep, above and above* for the *"first level"* of enumext environment equal to 0pt and finally set the variable \l__enumext_base_line_fix_bool to false.

```
988  \cs_new_protected:Nn \__enumext_nested_base_line_fix:
989    {
990      \bool_lazy_all:nT
991        {
992          { \bool_if_p:N \l__enumext_starred_first_bool }
993          { \bool_if_p:N \l__enumext_base_line_fix_bool }
994          { \bool_not_p:n { \l__enumext_print_keyans_star_bool } }
995        }
996        {
997          \mode_leave_vertical:
998          \vspace { -\dim_eval:n { \baselineskip + \parsep } }
999          \keys_set:nn { enumext / level-1 }
1000            {
1001              topsep = 0pt, above = 0pt, above* = 0pt,
1002            }
1003        }
```

When we are running the \printkeyans command with the *starred argument* '*' the variable \l__-enumext_print_keyans_star_bool is true and we can run a simplified version of \vspace using \skip_vertical:n.

```
1004      \bool_lazy_and:nnT
1005        { \bool_if_p:N \l__enumext_starred_first_bool }
1006        { \bool_if_p:N \l__enumext_print_keyans_star_bool }
1007        {
1008          \mode_leave_vertical:
1009          \skip_vertical:n { -\baselineskip }
1010          \skip_vertical:N \c_zero_skip
1011          \keys_set:nn { enumext / level-1 }
1012            {
1013              topsep = 0pt, above = 0pt, above* = 0pt,
```

```
1014              }
1015            }
1016          \bool_set_false:N \l__enumext_base_line_fix_bool
1017        }
```

(*End of definition for* base-fix *and* __enumext_nested_base_line_fix:.)

13.19   Setting keys for horizontal spaces

<div style="float:left">itemindent
rightmargin
listparindent
list-offset
list-indent</div>

Define and set itemindent, rightmargin, listparindent, list-offset and list-indent keys for enumext, enumext*, keyans and keyans* environments.

```
1018  \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1019    {
1020      \keys_define:nn { enumext / #1 }
1021        {
1022          itemindent    .dim_set:c = { l__enumext_fake_item_indent_#2_dim },
1023          itemindent    .value_required:n = true,
1024          rightmargin   .dim_set:c = { l__enumext_rightmargin_#2_dim },
1025          rightmargin   .value_required:n = true,
1026          listparindent .dim_set:c = { l__enumext_listparindent_#2_dim },
1027          listparindent .value_required:n = true,
1028          list-offset   .dim_set:c = { l__enumext_listoffset_#2_dim },
1029          list-offset   .value_required:n = true,
1030          list-indent   .code:n    =
1031                          \bool_set_true:c { l__enumext_leftmargin_tmp_#2_bool }
1032                          \dim_set:cn { l__enumext_leftmargin_tmp_#2_dim } {##1},
1033          list-indent   .value_required:n = true,
1034        }
1035    }
1036  \clist_map_inline:nn
1037    {
1038      {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {keyans}{v}

13.22 Setting keys for `multicols` and `minipage`

`mini-env`
`mini-sep`
`columns-sep`
`columns`

The default value of the `columns-sep` key is handled by the state of the boolean variable `\l__enumext_-columns_sep_X_bool` which is handled in the internal definition of the enumext and keyans environments. Define and set `mini-env`, `mini-sep`, `columns-sep` and `columns` keys for enumext, enumext*, keyans and keyans* environments.

```
1203 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1204   {
1205     \keys_define:nn { enumext / #1 }
1206       {
1207         mini-env    .dim_set:c  = { l__enumext_minipage_right_#2_dim },
1208         mini-env    .value_required:n = true,
1209         mini-sep    .dim_set:c  = { l__enumext_minipage_hsep_#2_dim },
1210         mini-sep    .initial:n  = 0.3333em,
1211         mini-sep    .value_required:n = true,
1212         columns-sep .dim_set:c  = { l__enumext_columns_sep_#2_dim },
1213         columns-sep .value_required:n = true,
1214         columns     .int_set:c  = { l__enumext_columns_#2_int },
1215         columns     .initial:n  = 1,
1216         columns     .value_required:n = true,
1217       }
1218   }
1219 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

For enumext* and keyans* environments the situation is a bit different, the command `\miniright` is not available, so we will add the keys `mini-right` and `mini-right*` to implement support for `minipage` environment.

```
1220 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1221   {
1222     \keys_define:nn { enumext / #1 }
1223       {
1224         mini-right  .tl_gset:c = { g__enumext_miniright_code_#2_tl },
1225         mini-right  .value_required:n = true,
1226         mini-right* .code:n    = {
```

```
1227                                    \bool_gset_true:c { g__enumext_minipage_center_#2_bool }
1228                                    \keys_set:nn { enumext / #1 } { mini-right = {##1} }
1229                                  },
1230            mini-right* .value_required:n = true,
1231        }
1232    }
1233  \clist_map_inline:nn { {enumext*}{vii}, {keyans*}{viii} } { \__enumext_tmp:nn #1 }
```

(*End of definition for* `mini-env` *and others.*)

13.23 Adjustment of vertical spaces for multicols

When nesting a *"list environment"* inside the multicols environment, the values of the *"vertical spaces"* are lost, basically the multicols environment takes control over them. Graphically, this can be seen in figure 7.

Figure 7: Representation of the vertical space in multicols for a nested level.

To keep the desired spaces *above* and *below* in the *"list environment"* (\topsep + [\partopsep]) it is necessary to *"adjust"* the spaces added by the multicols environment. The most appropriate option in this case is to use a *"context sensitive"* vertical space with \addvspace.

🌱 I should make it clear that the implementation here is a *"bit questionable"*. At first glance doing \multicolsep=\topsep seemed right, but the results were not always as expected. An almost *imperceptible* detail is that in some cases the \itemsep values of are *"stretched"*, possibly due to the use of \raggedcolumns and this affects the lower space when closing the environment, which is *"smaller"* than expected. My attempts to find the correct values using \showoutput and \showboxdepth absolutely failed.

13.23.1 Adjustment of vertical spaces for multicols in enumext

__enumext_multi_set_vskip: The function __enumext_multi_set_vskip: will take care of determining the *"adjusted spaces"* that we will apply *"above"* and *"below"* the multicols environment in enumext.

We will set the default values taking into account that TEX is in ⟨*horizontal mode*⟩, then we will make the settings for the ⟨*vertical mode*⟩ in which \partopsep comes into play.

Set the values of \l__enumext_multicols_above_X_skip and \l__enumext_multicols_below_X_-skip equal to the value of \topsep in the *current level*.

```
1234  \cs_new_protected:Nn \__enumext_multi_set_vskip:
1235    {
1236      \skip_set:cn { l__enumext_multicols_above_ \__enumext_level: _skip }
1237        {
1238          \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
1239        }
1240      \skip_set:cn { l__enumext_multicols_below_ \__enumext_level: _skip }
1241        {
1242          \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
1243        }
1244      \__enumext_add_pre_parsep:
1245    }
```

(*End of definition for* `\__enumext_multi_set_vskip:`.)

__enumext_add_pre_parsep: The function __enumext_add_pre_parsep: *"adjusted"* the value of \l__enumext_multicols_above_-X_skip detecting the value of \parsep from the previous level. This is necessary since \parsep from the previous level affects the *vertical spaces*.

```
1246  \cs_new_protected:Nn \__enumext_add_pre_parsep:
1247    {
1248      \int_case:nn { \l__enumext_level_int }
1249        {
1250          { 2 }{
1251                  \skip_if_eq:nnF { \l__enumext_parsep_i_skip } { \c_zero_skip }
1252                    {
1253                      \skip_add:Nn \l__enumext_multicols_above_ii_skip
1254                        {
1255                          \l__enumext_parsep_i_skip
1256                        }
1257                    }
1258                }
1259          { 3 }{
```

```
1260              \skip_if_eq:nnF { \l__enumext_parsep_ii_skip } { \c_zero_skip }
1261                {

13.24 Adjustment of vertical spaces for minipage

When nesting a *"list environment"* within the minipage environment, the values of the *"vertical spaces"* are lost. Graphically it can be seen like in the figure 8.

Figure 8: Representation of the minipage spacing adjustment for a nested level.

Since we want to keep the *"left"* and *"right"* environments *"aligned on top"*, preserving the \baselineskip and keep the desired *"spaces"* (\topsep + [\partopsep]) it is necessary to *"adjust"* the *"vertical spaces"* for minipage environments.

Here there are several complications that we must circumvent, the minipage environment eliminates the "top" spaces, the multicols environment can be nested in the minipage environment, the "top" and "bottom" spaces are affected when topsep=0pt and to this is added the \partopsep parameter that comes into action according to whether TeX is in ⟨*horizontal mode*⟩ or ⟨*vertical mode*⟩. Depending on these cases, small adjustments must be made using \vspace and \addvspace to obtain the *"desired vertical spacing"*.

🔮 Again I must make clear that the implementation here is a *"bit questionable"*, but hunting the spaces (glue) produced by the minipage environment is quite complicated, even more if multicols it is nested. The setting of the values was more *"trial and error"* (approx to \strutbox), using the help of the lua-visual-debug[15] package, again my attempts to find the correct values using \showoutput and \showboxdepth absolutely failed.

13.24.1 Adjustment of vertical spaces for minipage in enumext

__enumext_minipage_set_skip:
__enumext_minipage_add_space:

The function __enumext_minipage_set_skip: will take care of determining the *"adjust"* spaces that we will apply *"above"* and *"below"* the __enumext_mini_page environment in enumext.

First we will set the value of \l__enumext_minipage_right_skip equal to \topsep, then we will see if TeX is in ⟨*vertical mode*⟩ and we will add \partopsep, followed by that we set the value of \l__enumext_-minipage_after_skip.

```
1324  \cs_new_protected:Nn \__enumext_minipage_set_skip:
1325    {
1326      \skip_set:Nn \l__enumext_minipage_right_skip
1327        {
1328          \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
1329        }
1330      \mode_if_vertical:T
1331        {
1332          \skip_add:Nn \l__enumext_minipage_right_skip
1333            {
1334              \skip_use:c { l__enumext_partopsep_ \__enumext_level: _skip }
1335            }
1336        }
1337      \skip_set_eq:NN \l__enumext_minipage_after_skip \l__enumext_minipage_right_skip
```

We will adjust the values \l__enumext_multicols_above_X_skip and \l__enumext_multicols_-below_X_skip and call the function __enumext_pre_itemsep_skip:.

```
1338      \skip_set_eq:cN
1339        { l__enumext_multicols_above_ \__enumext_level: _skip } \l__enumext_minipage_right_skip
1340      \skip_set_eq:cN
1341        { l__enumext_multicols_below_ \__enumext_level: _skip } \l__enumext_minipage_right_skip
1342      \__enumext_pre_itemsep_skip:
```

If the environment multicols is active, we set \topskip=0pt and then we make \multicolsep have the same value as \l__enumext_multicols_above_X_skip.

```
1343      \int_compare:nNnT
1344        { \int_use:c { l__enumext_columns_ \__enumext_level: _int } } > { 1 }
1345        {
1346          \skip_zero:N \topskip
1347          \skip_set_eq:Nc \multicolsep { l__enumext_multicols_above_ \__enumext_level: _skip }
```

```
1348            }
1349       }
```

The function `\__enumext_minipage_add_space:` will apply the spaces on the *"left side"* using `\addvspace` *"above"* the `__enumext_mini_page` environment, taking into account whether TeX is in ⟨*horizontal mode*⟩ or ⟨*vertical mode*⟩. Here we use the plain TeX macro `\nointerlineskip` to prevent baseline *"glue"* being added between the next pair of boxes in a *vertical list*. For the latter we will make some adjustments since the `\partopsep` parameter comes into play and this affects the *vertical spacing*.

```
1350  \cs_new_protected:Nn \__enumext_minipage_add_space:
1351    {
1352      \__enumext_minipage_set_skip:
1353      \__enumext_unskip_unkern:
1354      \mode_if_vertical:TF
1355        {
1356          \nopagebreak\nointerlineskip
1357        }
1358        {
1359          \par\nopagebreak\nointerlineskip
1360          \skip_zero:c { l__enumext_partopsep_ \__enumext_level: _skip }
1361        }
1362      \int_compare:nNnTF
1363        { \int_use:c { l__enumext_columns_ \__enumext_level: _int } } > { 1 }
1364        {
1365          \addvspace{ 0.445\box_ht:N \strutbox }
1366        }
1367        {
1368          \addvspace{ 0.250\box_ht:N \strutbox }
1369        }
1370    }
```

(*End of definition for* `\__enumext_minipage_set_skip:` *and* `\__enumext_minipage_add_space:`.)

`\__enumext_pre_itemsep_skip:`   The function `\__enumext_pre_itemsep_skip:` will adjust the spaces below the environment `minipage` and the environment `multicols` if it is nested in it, taking into account the value of `\itemsep` from the previous level.

```
1371  \cs_new_protected:Nn \__enumext_pre_itemsep_skip:

1643      }
```

(*End of definition for* __enumext_mini_addvspace_vii: *and* __enumext_mini_addvspace_viii:.)

13.24.4 The command \miniright

The command \miniright will close the __enumext_mini_page environment on the *"left side"*, open the __enumext_mini_page environment on the *"right side"* adding the *adjusted vertical space*. By default we will add \centering when starting the *"right side"* environment. The *starred argument* '*' inhibits the use of \centering command i.e. the usual LaTeX justification is maintained in the __enumext_mini_page on the *"right side"*.

\miniright First we will perform some checks to prevent the command from being executed outside the enumext environment or somewhere inappropriate then we will call the internal functions to execute it in the enumext and keyans environments.

```
1644  \NewDocumentCommand \miniright { s }
1645      {
1646          \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
1647              {
1648                  \msg_error:nnn { enumext } { wrong-miniright-place }
1649              }
1650          % outside
1651          \bool_lazy_and:nnT
1652              { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
1653              { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
```

```
1654        {

1669        { \__enumext_mini_right_cmd:n {#1} }
1670    }
```

(*End of definition for* `\miniright`*. This function is documented on page 12.*)

`\__enumext_mini_right_cmd:n`   The function `\__enumext_mini_right_cmd:n` takes as argument the *starred* '*' of the `\miniright` command in the enumext environment. We check if the mini-env key is active via the variable `\l__enumext_-minipage_right_X_dim`, if so we close the multicols environment with the `__enumext_mini_page` environment on the *"left side"*, then we open the `__enumext_mini_page` environment on the *"right side"*, apply our adjusted *"vertical spaces"*, followed by adding the `\centering` command when the *starred argument* '*' is not present and set zero `\g__enumext_minipage_stat_int`, otherwise we return an error.

```

13.25 Setting above and below keys

While having controlled the *vertical spaces* within the enumext and keyans environments when using the columns or mini-env keys, sometimes the *"vertical spaces above"* or *"vertical spaces below"* the environments are not as expected and it is necessary to be able to apply a *"fine correction"* to these. As I have not been able to correct these *glitches*, the best option is to leave a couple of ⟨keys⟩ dedicated to this purpose, in this case it is best to use \vspace or \vspace* when convenient.

above
above*
below
below*

Define above, above*, below and below* keys for enumext and keyans environments.

```
1727 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1728   {
1729     \keys_define:nn { enumext / #1 }
1730       {
1731         above  .skip_set:c = { l__enumext_vspace_above_#2_skip },
1732         above  .value_required:n = true,
1733         above* .code:n      = \bool_set_true:c { l__enumext_vspace_a_star_#2_bool }
1734                               \keys_set:nn { enumext / #1 } { above = {##1} },
1735         above* .value_required:n = true,
1736         below  .skip_set:c = { l__enumext_vspace_below_#2_skip },
1737         below  .value_required:n = true,
1738         below* .code:n      = \bool_set_true:c { l__enumext_vspace_b_star_#2_bool }
1739                               \keys_set:nn { enumext / #1 } { below = {##1} },
1740         below* .value_required:n = true,
1741       }
1742   }
1743 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(*End of definition for* above *and others.*)

13.25.1 Functions for above and below keys in enumext

__enumext_vspace_above: The function __enumext_vspace_above: apply the *vertical space above* the enumext environment set by the above* and above keys.

```
1744 \cs_new_protected:Nn \__enumext_vspace_above:

13.26   Setting series, resume and resume* keys

The series key is responsible for the whole process of the resume and resume* keys. The idea behind this is to be able to absorb the ⟨*keys*⟩ passed to the *optional argument* of the environments enumext and enumext*, but, discarding some specific ⟨*keys*⟩.

series   We define the keys series, resume and resume* for the *"all levels"* of enumext and enumext*. Here we
resume   do not need to make sure that \printkeyans is not running otherwise the *start value* of the environments
resume*   would be increased when using resume or resume* keys.

In version 1.6 it is allowed to pass the key resume *without value* by means of the command \setenumext, for the correct operation of this we must set the boolean variable \l__enumext_resume_count_bool set by the key resume *without value* to "true" to be later processed by the function __enumext_parse_series:n in the definition of the environments enumext and enumext*.

```
1838  \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1839    {
1840      \keys_define:nn { enumext / #1 }

13.26.2 Internal function for resume counters

__enumext_resume_counter: The __enumext_resume_counter: function is executed by the resume* key and resume key *without value*, only the *"counters"* for the *"levels"* of the environments in which it is executed will be set. If the save-ans key is active it will set the *"counter"* according to the value of the integer variable created by that key.

13.26.3 Internal functions for series key

`\__enumext_filter_series:n`
`\__enumext_filter_series_key:n`
`\__enumext_filter_series_pair:nn`

The function `\__enumext_filter_series:n` will be in charge of filtering the ⟨*keys*⟩ we want to store where #1 represents the *optional argument* passed to the environment. This implementation is adapted directly from the code provided by Jonathan P. Spratte (@Skillmon) in chat-TeX-SX

```
2014  \cs_new:Npn \__enumext_filter_series:n #1
2015    {
2016      \use:e
2017        {
2018          \keyval_parse:NNn
2019            \__enumext_filter_series_key:n
2020            \__enumext_filter_series_pair:nn {#1}
2021        }
2022    }
```

The function `\__enumext_filter_series_key:n` will be responsible for filtering the ⟨*keys*⟩ that are passed "*without value*" by excluding the resume, resume*, reset, reset* and base-fix keys.

```
2023  \cs_new:Npn \__enumext_filter_series_key:n #1
2024    {
2025      \str_case:nnF {#1}
2026        {
2027          { resume } {} { resume* } {} { reset } {} { reset* } {} { base-fix } {}
2028        }
2029        { , { \exp_not:n {#1} } }
2030    }
```

The function `\__enumext_filter_series_pair:nn` will be responsible for filtering the ⟨*keys*⟩ that are passed "*with value*" by excluding the series, resume, start, start*, save-ans and save-key keys.

```
2031  \cs_new:Npn \__enumext_filter_series_pair:nn #1#2
2032    {
2033      \str_case:nnF {#1}
2034        {
2035          { series } {} { resume } {} { start } {}
2036          { start* } {}  { save-ans } {} { save-key } {}
```

```
2037            }
2038            { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
2039    }
```

(*End of definition for* __enumext_filter_series:n, __enumext_filter_series_key:n, *and* __enumext_filter_series_-
pair:nn.)

__enumext_save_last_keys:n

__enumext_resume_last_counter:

The function __enumext_save_last_keys:n will be in charge of saving the filtering ⟨keys⟩ when the
keys series={⟨series name⟩} or resume={⟨series name⟩} or resume* are NOT active and will save them
in the variable \g__enumext_resume_last_keys_X_tl for the enumext environment and in the variable
\g__enumext_resume_last_keys_vii_tl for the enumext* environment.

🎯 The boolean variable \l__enumext_resume_series_X_bool is set to "true" by the key resume={⟨series name⟩}, the
boolean variable \l__enumext_resume_star_key_X_bool is set to "true" by the key resume*, in this case we need to
make sure both variables are set to ""false" so that they don't override the default filtered ⟨keys⟩.

```
2040 \cs_new_protected:Npn \__enumext_save_last_keys:n #1
2041    {
2042        \int_compare:nNnT { \l__enumext_level_int } > { 0 }
2043            {
2044                \bool_if:cF { l__enumext_resume_series_ \__enumext_level: _bool }
2045                    {
2046                        \bool_if:cF { l__enumext_resume_star_key_ \__enumext_level: _bool }
2047                            {
2048                                \tl_gclear:c { g__enumext_resume_last_keys_ \__enumext_level: _tl }
2049                                \tl_gset:ce
2050                                    { g__enumext_resume_last_keys_ \__enumext_level: _tl }
2051                                    { \__enumext_filter_series:n {#1} }
2052                            }
2053                    }
2054            }
2055        \int_compare:nNnT { \l__enumext_level_h_int } = { 1 }
2056            {
2057                \bool_if:NF \l__enumext_resume_series_vii_bool
2058                    {
2059                        \tl_gclear:N \g__enumext_resume_last_keys_vii_tl
2060                        \tl_gset:Ne \g__enumext_resume_last_keys_vii_tl { \__enumext_filter_series:n {#1} }
2061                    }
2062            }
2063    }
```

The __enumext_resume_last_counter: function will be in charge of setting the *"counters"* when the
keys series={⟨series name⟩} or resume={⟨series name⟩} are NOT active and the resume key is being used
without value either in the *optional argument* of the environments or through the \setenumext command.

🎯 The boolean variable \l__enumext_resume_count_bool is set to "true" by the keys resume *without value* and resume*;
and set to "false" by the keys start and start* (§13.15).

```
2064 \cs_new_protected:Nn \__enumext_resume_last_counter:
2065    {
2066        \bool_lazy_and:nnT
2067            { \bool_if_p:N \l__enumext_resume_count_bool }
2068            { \tl_if_empty_p:N \l__enumext_series_name_tl }
2069            {
2070                \__enumext_resume_counter:
2071            }
2072    }
```

(*End of definition for* __enumext_save_last_keys:n *and* __enumext_resume_last_counter:.)

__enumext_parse_series:n

The __enumext_parse_series:n function handled by the series key will be responsible for *storing* the
filtered ⟨keys⟩ from the *optional arguments* of the enumext and enumext* environments for the resume and
resume* keys. If the series key is NOT active it will call the __enumext_save_last_keys:n function
to *store* the *filtered* ⟨keys⟩ that will be used by the resume* key and then the __enumext_resume_last_-
counter: function used by the resume key *without value* if it is active, otherwise *store* the *filtered* ⟨keys⟩ in
the global variable \g__enumext_series_⟨series name⟩_X_tl along with the creation of the integer variable
\g__enumext_series_⟨series name⟩_X_int used by the resume key *with value.*

🎯 This function is passed to the function __enumext_parse_keys:n in the enumext environment definition (§13.42) and
to the function __enumext_parse_keys_vii:n in the enumext* environment definition (§13.47).

```
2073 \cs_new_protected:Npn \__enumext_parse_series:n #1
2074    {
2075        \str_if_empty:NTF \l__enumext_series_name_str

```

(*End of definition for* `\__enumext_parse_series:n`.)

13.26.4 Internal functions for `resume` key with value

`\__enumext_resume:n` The function `\__enumext_resume:n` will handle the *argument* {⟨*series name*⟩} passed to the `resume` key in `enumext` and `enumext*` environments. First we will check if the global variable `\g__enumext_series_-`⟨*series name*⟩`_X_tl` exists, if so we will call the function `\__enumext_resume_series:n` and pass the ⟨*keys*⟩ stored in `\g__enumext_series_`⟨*series name*⟩`_X_tl` to the environments, otherwise we will return an error.

```
2116  \cs_new_protected:Npn \__enumext_resume:n #1
2117    {
2118      \int_compare:nNnT { \l__enumext_level_int } > { 0 }

2235        }
2236    }
```

(*End of definition for* __enumext_resume_star:.)

13.27 The \resetenumext command

Sometimes it is necessary to be able to reset the *"counters"* of the environments according to some value, for example \chapter. Since we use *"internal counters"* for the resume and resume* keys which set the *start value*, but are not accessible by the user, it is to provide a public command for this. This implementation is an adaptation of the answers given by Clea F. Rees (@cfr) and Jonathan P. Spratte (@Skillmon) in Correct implementation of optional argument (comma-separated) in expl3.

\resetenumext
__enumext_standard_reset:nn
__enumext_starred_reset:n
__enumext_reset_count_resume:nn
__enumext_reset_count_resume:en
__enumext_reset_count_resume_all:n
__enumext_reset_count_resume_levels:n

The \resetenumext command *"resets"* the *start value* of the *"counters"* for the enumext and enumext* environments along with the *"internal counters"* used by the keys resume *without value* and resume* according to the value of {⟨some counter⟩}.

```
2237  \NewDocumentCommand \resetenumext { s o m }
2238    {
2239      \bool_if:nTF {#1}
2240        {
2241          \__enumext_reset_count_resume_all:n {#3}
2242        }
2243        {
2244          \tl_if_novalue:nTF {#2}
2245            {

2289        }
2290    }
```

(End of definition for \resetenumext *and others. This function is documented on page 11.)*

13.28 The reset and reset* keys

The \resetenumext command does not work, for example, after an unnumbered chapter, so it is preferable to provide a pair of ⟨*keys*⟩ that adjust the internal variables if necessary.

reset
reset*

We define the keys reset and reset* for the *"all levels"* of enumext and enumext*.

```
2291 \cs_set_protected:Npn \__enumext_tmp:n #1
2292    {
2293      \keys_define:nn { enumext / #1 }
2294        {
2295          reset  .code:n = \__enumext_standard_reset_key:,
2296          reset  .value_forbidden:n = true,
2297          reset* .code:n = \__enumext_standard_reset_key_star:,
2298          reset* .value_forbidden:n = true,
2299        }
2300    }
2301 \clist_map_inline:nn {level-1, level-2, level-3, level-4} { \__enumext_tmp:n {#1} }
2302 \keys_define:nn { enumext / enumext* }
2303    {
2304      reset  .code:n = \__enumext_starred_reset_key:,
2305      reset  .value_forbidden:n = true,
2306      reset* .code:n = \__enumext_starred_reset_key:,
2307      reset* .value_forbidden:n = true,
2308    }
```

(End of definition for reset *and* reset*.)*

13.28.1 Internal functions for `reset` and `reset*` keys

The function `\__enumext_standard_reset_key:` will be handled by the `reset` key and will *"reset"* the counter `\c@__enumext_resume_X_int` to *"zero"* according to the *level* at which it is executed within the `enumext` environment.

```
2309 \cs_new_protected:Nn \__enumext_standard_reset_key:
2310   {
2311     \int_compare:nNnT { \l__enumext_level_int } > { 0 }
2312       {
2313         \int_if_exist:cT { c@ __enumext_resume_ \int_to_roman:n { \l__enumext_level_int } _int }
2314           {
2315             \int_gzero:c { c@ __enumext_resume_ \int_to_roman:n { \l__enumext_level_int } _int }
2316           }
2317       }
2318   }
```

The function `\__enumext_standard_reset_key_star:` will be handled by the `reset*` key and will *"reset"* the counters `\c@__enumext_resume_X_int` to *"zero"* from the *level* at which it is executed within the `enumext` environment to the *lower levels*.

```
2319 \cs_new_protected:Nn \__enumext_standard_reset_key_star:
2320   {
2321     \cs_set:Npn \__enumext_tmp:n ##1
2322       {
2323         \int_if_exist:cT { c@ __enumext_resume_ \int_to_roman:n {##1} _int }
2324           {
2325             \int_gzero:c { c@ __enumext_resume_ \int_to_roman:n {##1} _int }
2326           }
2327       }
2328     \int_compare:nNnT { \l__enumext_level_int } > { 0 }
2329       {
2330         \int_step_function:nnN { \l__enumext_level_int } { 4 } \__enumext_tmp:n
2331       }
2332   }
```

The function `\__enumext_starred_reset_key:` will be handled by `reset` keys and `reset*` will *"reset"* the counter `\c@__enumext_resume_vii_int` to *"zero"* when executed in the `enumext*` environment.

```
2333 \cs_new_protected:Nn \__enumext_starred_reset_key:
2334   {
2335     \int_gzero:c { c@ __enumext_resume_vii_int }
2336   }
```

(*End of definition for* `\__enumext_standard_reset_key:`, `\__enumext_standard_reset_key_star:`, *and* `\__enumext_starred_-reset_key:`.)

13.29 Setting `save-ans`, `check-ans` and `no-store` keys

The key `save-ans` is directly associated with the keys `check-ans`, `no-store`, `resume` and `resume*`, this will activate the entire *"storage system"* in the enumext package.

13.29.1 Setting `save-ans` key

We define the keys `save-ans` only for the *"first level"* of `enumext` and `enumext*`.

```
2337 \cs_set_protected:Npn \__enumext_tmp:n #1
2338   {
2339     \keys_define:nn { enumext / #1 }
2340       {
2341         save-ans .code:n = \__enumext_storing_set:n {##1},
2342         save-ans .value_required:n = true,
2343       }
2344   }
2345 \clist_map_inline:nn { level-1, enumext* } { \__enumext_tmp:n {#1} }
```

(*End of definition for* `save-ans`.)

13.29.2 Internal functions for `save-ans` key

The functions `\__enumext_start_save_ans_msg:` and `\__enumext_stop_save_ans_msg:` will display in the terminal and `.log` file the environment in which the `save-ans` key was executed along with the line at the beginning and end of it. The function `\__enumext_start_save_ans_msg:` will be passed to `\__enumext_storing_set:n` and the function `\__enumext_stop_save_ans_msg:` will be passed to the function `\__enumext_execute_after_env:`.

```
2346 \cs_new_protected:Nn \__enumext_start_save_ans_msg:
2347   {
2348     \msg_term:nnVV { enumext } { save-ans-log }
```

```
2349        \g__enumext_envir_name_tl \l__enumext_store_name_tl
2350    }
2351 \cs_new_protected:Nn \__enumext_stop_save_ans_msg:
2352    {
2353      \msg_term:nnVV { enumext } { save-ans-log-hook }
2354        \g__enumext_envir_name_tl \g__enumext_store_name_tl
2355    }
```

(*End of definition for* __enumext_start_save_ans_msg: *and* __enumext_stop_save_ans_msg:*.*)

__enumext_storing_set:n
__enumext_storing_exec:

The function __enumext_storing_set:n first pass the value of the save-ans key to the variable \l__-enumext_store_name_tl which will contain the {⟨*store name*⟩} of the *sequence* and *prop list* we will use. If \l__enumext_store_name_tl is *empty* we return an error message, otherwise will return the appropriate message __enumext_start_save_ans_msg: and proceed to execute the function __enumext_-storing_exec: for enumext and enumext* environments.

```
2356 \cs_new_protected:Npn \__enumext_storing_set:n #1
2357    {
2358      \tl_set:Ne \l__enumext_store_name_tl {#1}
2359      \tl_if_empty:NTF \l__enumext_store_name_tl
2360        {
2361          \bool_lazy_or:nnT
2362            { \l__enumext_standar_first_bool } { \l__enumext_starred_first_bool }
2363            {
2364              \msg_error:nnV { enumext } { save-ans-empty } \g__enumext_envir_name_tl
2365            }
2366        }
2367        {
2368          \bool_lazy_or:nnT
2369            { \l__enumext_standar_first_bool } { \l__enumext_starred_first_bool }
2370            {
2371              \__enumext_start_save_ans_msg:
2372              \__enumext_storing_exec:
2373            }
2374        }
2375    }
```

The function __enumext_storing_exec: will set to true the variable \l__enumext_store_active_-bool which activates the use of the \anskey command and the anskey*, keyans, keyans* and keyanspic environments and will set to "true" the variable \l__enumext_check_answers_bool used for internal checking answers mechanism set by the check-ans and no-store keys, copy {⟨*store name*⟩} into the variable \g__enumext_store_name_tl.

```
2376 \cs_new_protected:Nn \__enumext_storing_exec:
2377    {
2378      \bool_set_true:N \l__enumext_store_active_bool
2379      \bool_set_true:N \l__enumext_check_answers_bool
2380      \tl_gset:NV \g__enumext_store_name_tl \l__enumext_store_name_tl
```

The *prop list* \g__enumext_series_⟨*store name*⟩_prop and the *sequence* \g__enumext_series_⟨*store name*⟩_seq will be created globally to "*store content*" in case they do not exist together with the integer variable \g__enumext_series_⟨*store name*⟩_int used by the keys resume and resume*.

```
2381        \prop_if_exist:cF { g__enumext_ \l__enumext_store_name_tl _prop }
2382          {
2383            \msg_log:nnV { enumext } { store-prop } \l__enumext_store_name_tl
2384            \prop_new:c { g__enumext_ \l__enumext_store_name_tl _prop }
2385          }

2396    }
```

(*End of definition for* __enumext_storing_set:n *and* __enumext_storing_exec:*.*)

13.29.3 The check answer mechanism

The internal mechanism for *"checking answers"* follows this logic:

> If the line begins with `\item` or `\item*` and does NOT *open a nested environment*, each `\item` or `\item*` must contain a *single* execution of the `\anskey` command, i.e. the counter of the executions of the `\anskey` command must be equal to the counter associated with the sum of executions of `\item` and `\item*`.

> If the line begins with `\item` or `\item*` and *opens a nested environment* each `\item` or `\item*` in the nested environment must have a *single* execution of the `\anskey` command and the counter associated to the sum of `\item` and `\item*` executions must decrementing by *"one"* to maintain equality.

In order for the mechanism for the check-answer to work (not counting `keyans`, `keyans*` and `keyanspic`) we need:

1. We must keep track of the total number of `\item` and `\item*` (enumerated) that appear within the environment including the nested levels.
2. We must keep track of the total number of `\item` and `\item*` (enumerated) that appear per level of nesting.
3. Keeping track of the number of times the environment nests.

The integer variable associated to the sum of each `\item` and `\item*` in the environment `\g__enumext_item_number_int` must match the integer variable `\g__enumext_item_anskey_int` associated to the execution of the command `\anskey`. We analyze the cases:

a) If the list only has one level the number of `\item` + `\item*` = `\anskey`
b) If the list has *nested levels*, for each level of nesting we need to decrementing by one (for the `\item` or `\item*` that opens the nest) so that the account remains the same.

With `keyans`, `keyans*` and `keyanspic` it is enough to increase in one the integer of `\anskey`. The integers created must be global if they are not lost in the interior levels of nesting and to execute the test we will use a *"hook"* function after closing the *first level* of the environment.

13.29.4 Setting check-ans and no-store keys

check-ans
no-store

Now we define the keys `check-ans` and `no-store` for all levels of `enumext` and `enumext*` environments.

```
2397 \cs_set_protected:Npn \__enumext_tmp:n #1
2398   {
2399     \keys_define:nn { enumext / #1 }
2400       {
2401         check-ans .bool_set:N = \l__enumext_check_ans_key_bool,
2402         check-ans .initial:n  = false,
2403         check-ans .value_required:n = true,
2404         no-store  .code:n = {
2405                             \bool_set_false:N \l__enumext_check_answers_bool
2406                             \bool_set_false:N \l__enumext_check_ans_key_bool
2407                           },
2408         no-store  .value_forbidden:n = true,
2409       }
2410   }
2411 \clist_map_inline:nn
2412   {
2413     level-1, level-2, level-3, level-4, enumext*
2414   }
2415   { \__enumext_tmp:n {#1} }
```

(End of definition for check-ans *and* no-store*.)*

13.29.5 Set-up check answer mechanism

__enumext_check_ans_active:
__enumext_check_ans_level:

The function `\__enumext_check_ans_active:` will first check the state of the variable `\l__enumext_store_name_tl`, that is, the `save-ans` key is active, if so it will check the state of the variable `\l__enumext_check_answers_bool` handled by the key `no-store` and will execute the function `\__enumext_check_ans_level:` only if *"true"*, i.e. the key `no-store` is not active.

```
2416 \cs_new_protected:Nn \__enumext_check_ans_active:
2417   {
2418     \tl_if_empty:NF \l__enumext_store_name_tl
2419       {
2420         \bool_if:NT \l__enumext_check_answers_bool
2421           {
2422             \__enumext_check_ans_level:
2423           }
2424       }
2425   }
```

The function __enumext_check_ans_level: will decrement by *"one"* the value of the variable \g__-enumext_item_number_int which keeps track of the executions of \item and \item* for each level of nesting of the environment enumext, taking into account whether it is nested within enumext* or the opposite and set \l__enumext_item_number_bool to *"false"* .

```
2426  \cs_new_protected:Nn \__enumext_check_ans_level:
2427    {
2428      \int_case:nn { \l__enumext_level_int }
2429        {
2430          { 1 }{
2431              \bool_lazy_all:nT
2432                {
2433                  { \bool_if_p:N \g__enumext_starred_bool }
2434                  { \int_compare_p:nNn { \l__enumext_level_h_int } = { 1 } }
2435                }
2436                {
2437                  \int_gdecr:N \g__enumext_item_number_int
2438                  \bool_set_false:N \l__enumext_item_number_bool
2439                }
2440            }
2441          { 2 }{
2442              \int_gdecr:N \g__enumext_item_number_int
2443              \bool_set_false:N \l__enumext_item_number_bool
2444            }
2445          { 3 }{
2446              \int_gdecr:N \g__enumext_item_number_int
2447              \bool_set_false:N \l__enumext_item_number_bool
2448            }
2449          { 4 }{
2450              \int_gdecr:N \g__enumext_item_number_int
2451              \bool_set_false:N \l__enumext_item_number_bool
2452            }
2453        }
```

We should only execute this if enumext* is nested in the *"first level"* of enumext, for the rest of the cases the value of \g__enumext_item_number_int is already decreased.

```
2454      \int_case:nn { \l__enumext_level_h_int }
2455        {
2456          { 1 }{
2457              \bool_lazy_all:nT
2458                {
2459                  { \bool_if_p:N \g__enumext_standar_bool }
2460                  { \int_compare_p:nNn { \l__enumext_level_int } = { 1 } }
2461                }
2462                {
2463                  \int_gdecr:N \g__enumext_item_number_int
2464                  \bool_set_false:N \l__enumext_item_number_bool
2465                }
2466            }
2467        }
2468    }
```

(*End of definition for* __enumext_check_ans_active: *and* __enumext_check_ans_level:.)

__enumext_check_ans_key_hook:

The function __enumext_check_ans_key_hook: will *export* the status of the local variable \l__-enumext_check_ans_key_bool to the global variable \g__enumext_check_ans_key_bool only if the key check-ans is active.

```
2469  \cs_new_protected:Nn \__enumext_check_ans_key_hook:
2470    {
2471      \bool_lazy_and:nnT
2472        { \bool_if_p:N \l__enumext_check_ans_key_bool }
2473        { \bool_if_p:N \g__enumext_standar_bool }
2474        {
2475          \bool_gset_true:N \g__enumext_check_ans_key_bool
2476        }
2477      \bool_lazy_and:nnT
2478        { \bool_if_p:N \l__enumext_check_ans_key_bool }
2479        { \bool_if_p:N \g__enumext_starred_bool }
2480        {
2481          \bool_gset_true:N \g__enumext_check_ans_key_bool
2482        }
2483    }
```

__enumext_item_answer_diff:

The function __enumext_item_answer_diff: will set the value of the variable \g__enumext_item_-answer_diff_int which is used by the functions __enumext_check_ans_show: for the key save-ans and by the function __enumext_check_ans_log: by the internal *"check answer"* mechanism. This function will be passed to the function __enumext_execute_after_env:.

```
2484 \cs_new_protected:Nn \__enumext_item_answer_diff:
2485   {
2486     \int_gset:Nn \g__enumext_item_answer_diff_int
2487       {
2488         \int_sign:n { \g__enumext_item_number_int - \g__enumext_item_anskey_int }
2489       }
2490   }
```

__enumext_check_ans_show:
__enumext_check_ans_msg_less:
__enumext_check_ans_msg_same_ok:
__enumext_check_ans_msg_greater:

The function __enumext_check_ans_show: will be executed within the function __enumext_execute_-after_env: when the key check-ans is active, that is, when \g__enumext_check_ans_key_bool is *"true"* and will return the appropriate message according to the value of \g__enumext_item_answer_diff_int set by the function __enumext_item_answer_diff:.

```
2491 \cs_new_protected:Nn \__enumext_check_ans_show:
2492   {
2493     \int_case:nn { \g__enumext_item_answer_diff_int }
2494       {
2495         { -1 }{ \__enumext_check_ans_msg_less:      }
2496         {  0 }{ \__enumext_check_ans_msg_same_ok: }
2497         {  1 }{ \__enumext_check_ans_msg_greater: }
2498       }
2499   }
2500 \cs_new_protected:Nn \__enumext_check_ans_msg_less:
2501   {
2502     \msg_warning:nneee { enumext } { item-less-answer } { \g__enumext_store_name_tl }
2503       { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2504   }
2505 \cs_new_protected:Nn \__enumext_check_ans_msg_same_ok:
2506   {
2507     \msg_term:nneee { enumext } { items-same-answer } { \g__enumext_store_name_tl }
2508       { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2509   }
2510 \cs_new_protected:Nn \__enumext_check_ans_msg_greater:
2511   {
2512     \msg_warning:nneee { enumext } { item-greater-answer } { \g__enumext_store_name_tl }

2514   }
```

__enumext_check_ans_log:
__enumext_check_ans_log_msg_less:
__enumext_check_ans_log_msg_same_ok:
__enumext_check_ans_log_msg_greater:

The function __enumext_check_ans_log: will be executed within the function __enumext_execute_-after_env: when the key check-ans is not active, that is, when \g__enumext_check_ans_key_bool is *"false"* and write in the log the appropriate message according to the value of \g__enumext_item_answer_-diff_int set by the function __enumext_item_answer_diff:.

```
2515 \cs_new_protected:Nn \__enumext_check_ans_log:
2516   {
2517     \int_case:nn { \g__enumext_item_answer_diff_int }
2518       {
2519         { -1 }{ \__enumext_check_ans_log_msg_less:      }
2520         {  0 }{ \__enumext_check_ans_log_msg_same_ok: }
2521         {  1 }{ \__enumext_check_ans_log_msg_greater: }
2522       }
2523   }
2524 \cs_new_protected:Nn \__enumext_check_ans_log_msg_less:
2525   {
2526     \msg_log:nneee { enumext } { item-less-answer } { \g__enumext_store_name_tl }
2527       { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2528   }
2529 \cs_new_protected:Nn \__enumext_check_ans_log_msg_same_ok:
2530   {
2531     \msg_log:nneee { enumext } { items-same-answer }  { \g__enumext_store_name_tl }
2532       { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2533   }
```

```
2534 \cs_new_protected:Nn \__enumext_check_ans_log_msg_greater:
2535   {
2536     \msg_log:nneee { enumext } { item-greater-answer } { \g__enumext_store_name_tl }
2537       { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2538   }
```

(*End of definition for __enumext_check_ans_log: and others.*)

13.29.6 Check for \item* and \anspic* commands

__enumext_check_starred_cmd:n The function __enumext_check_starred_cmd:n performs an *extra check* for the keyans, keyans* and keyanspic environments. Unlike the *check* executed by check-ans key this one is not controlled by any key, it is intended to prevent the forgetting of \item* or \anspic* in these environments.

```
2539 \cs_new_protected:Npn \__enumext_check_starred_cmd:n #1
2540   {
2541     \int_compare:nNnT
2542       { \g__enumext_check_starred_cmd_int } = { 0 }
2543       {
2544         \msg_warning:nnnV
2545           { enumext } { missing-starred }{ #1 } \l__enumext_check_start_line_env_tl
2546       }
2547     \int_compare:nNnT
2548       { \g__enumext_check_starred_cmd_int } > { 1 }
2549       {
2550         \msg_warning:nnnV
2551           { enumext } { many-starred }{ #1 } \l__enumext_check_start_line_env_tl
2552       }
2553     \int_gzero:N \g__enumext_check_starred_cmd_int
2554     \tl_clear:N \l__enumext_check_start_line_env_tl
2555   }
```

(*End of definition for __enumext_check_starred_cmd:n.*)

13.30 Keys and functions associated with storage

13.30.1 Keys for marks, wrap and show

The enumext package provides a set of ⟨*keys*⟩ for manipulating *"symbol marks"* associated with *"answers"* and how they are displayed and stored in the *sequence* and *prop list* as well as an internal *"label and ref"* system.

mark-ans*
mark-pos*
mark-sep*
wrap-ans*
wrap-opt
save-sep
show-ans
show-pos

For the keyans and keyans* environments we will only add the keys mark-ans*, mark-pos*, mark-sep*, wrap-ans*, wrap-opt, save-sep, show-ans and show-pos.

```
2556 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
2557   {
2558     \keys_define:nn { enumext / #1 }
2559       {
2560         mark-ans*  .tl_set:c  = { l__enumext_mark_answer_sym_#2_tl },
2561         mark-ans*  .initial:n = \textasteriskcentered,
2562         mark-ans*  .value_required:n = true,
2563         mark-pos*  .choice:,
2564         mark-pos* / left    .code:n = \str_set:cn { l__enumext_mark_position_#2_str } { l },
2565         mark-pos* / right   .code:n = \str_set:cn { l__enumext_mark_position_#2_str } { r },
2566         mark-pos* / center  .code:n = \str_set:cn { l__enumext_mark_position_#2_str } { c },
2567         mark-pos* / unknown .code:n =
2568                             \msg_error:nneee { enumext } { unknown-choice }
2569                               { mark-pos } { left,~right,~center } { \exp_not:n {##1} },
2570         mark-pos*  .initial:n = right,
2571         mark-pos*  .value_required:n = true,
2572         mark-sep*  .dim_set:c = { l__enumext_mark_sym_sep_#2_dim },
2573         mark-sep*  .value_required:n = true,
2574         wrap-ans*  .cs_set_protected:cp = { __enumext_keyans_wrapper_item_#2:n } ##1,
2575         wrap-ans*  .value_required:n = true,
2576         wrap-opt   .cs_set_protected:cp = { __enumext_keyans_wrapper_opt_#2:n } ##1,
2577         wrap-opt   .initial:n = [{##1}],
2578         wrap-opt   .value_required:n = true,
2579         save-sep   .tl_set:c = { l__enumext_store_keyans_item_opt_sep_#2_tl },
2580         save-sep   .initial:n = {,~},
2581         save-sep   .value_required:n = true,
2582         show-ans   .bool_set:N = \l__enumext_show_answer_bool,

```

(*End of definition for* `mark-ref` *and others.*)

13.30.2   Storing structure of the environments

The idea behind *"storing structure"* in the *sequence* is to have a copy of the *structure of the environment* in which the key `save-ans` is being executed so we must capture the *optional argument* passed to the levels of the environment in which it is executed and *"storing"* this in the *sequence.*

`\__enumext_store_active_keys:n`
`\__enumext_store_active_keys_vii:n`

The functions `\__enumext_store_active_keys:n` and `\__enumext_store_active_keys_vii:n` will be responsible for the *"storing keys"* filtered from the *optional argument* of the environment in which the key `save-ans` is executed and the levels within this for the `enumext` and `enumext*` environments. We will execute this function only if the variable `\l__enumext_store_save_key_X_bool` is false, that is, the key `store-key` is not active, establishing the variable `\l__enumext_store_save_key_X_tl` with the filtered ⟨*keys*⟩.

```
2661  \cs_new_protected:Npn \__enumext_store_active_keys:n #1
2662    {
2663      \bool_if:cF { l__enumext_store_save_key_ \__enumext_level: _bool }
2664        {
2665          \tl_clear:c { l__enumext_store_save_key_ \__enumext_level: _tl }
2666          \tl_set:ce
2667            { l__enumext_store_save_key_ \__enumext_level: _tl }
2668            { \__enumext_filter_save_key:n {#1} }
2669        }
2670    }
2671  \cs_new_protected:Npn \__enumext_store_active_keys_vii:n #1
2672    {
2673      \bool_if:NF \l__enumext_store_save_key_vii_bool
2674        {
2675          \tl_clear:N \l__enumext_store_save_key_vii_tl
2676          \tl_set:Ne \l__enumext_store_save_key_vii_tl { \__enumext_filter_save_key:n {#1} }
2677        }
2678    }
```

(*End of definition for* `\__enumext_store_active_keys:n` *and* `\__enumext_store_active_keys_vii:n`.)

13.30.3   Setting save-key key

Since this *"storing structure"* in the *sequence* established by the `save-ans` key when executing `\anskey` or `anskey*`, we will not be able to modify it. The best thing here is to have a key that allows you to modify the *optional argument* of the *"storing structure"* in the *sequence.*

`save-key`

The values set by this key passed in the *optional argument* of the `enumext` and `enumext*` environments will override the values of the `\l__enumext_store_save_key_X_tl` variable set by the functions `\__enumext_store_active_keys:n` and `\__enumext_store_active_keys_vii:n`. Now define the key `save-key` for all levels of `enumext` and `enumext*` environments.

```
2679  \cs_set_protected:Npn \__enumext_tmp:n #1
2680    {
2681      \keys_define:nn { enumext / enumext* }
2682        {
2683          save-key  .code:n = \__enumext_parse_save_key_vii:n {##1},
2684          save-key  .value_required:n = true,
2685        }
2686      \keys_define:nn { enumext / #1 }
2687        {
2688          save-key  .code:n = \__enumext_parse_save_key:n {##1},
2689          save-key  .value_required:n = true,
2690        }
2691    }
2692  \clist_map_inline:nn { level-1, level-2, level-3, level-4 } { \__enumext_tmp:n {#1} }
```

(*End of definition for* `save-key`.)

__enumext_parse_save_key:n
__enumext_parse_save_key_vii:n

The functions __enumext_parse_save_key:n and __enumext_parse_save_key_vii:n will be responsible for *"storing keys"* in the variable \l__enumext_store_save_key_X_tl for enumext and enumext*.

```
2693 \cs_new_protected:Npn \__enumext_parse_save_key:n #1
2694   {
2695     \bool_set_true:c { l__enumext_store_save_key_ \__enumext_level: _bool }
2696     \tl_clear:c { l__enumext_save_key_ \__enumext_level: _tl }
2697     \tl_set:ce
2698       { l__enumext_store_save_key_ \__enumext_level: _tl }
2699       { \__enumext_filter_save_key:n {#1} }
2700   }
2701 \cs_new_protected:Npn \__enumext_parse_save_key_vii:n #1
2702   {
2703     \bool_set_true:N \l__enumext_store_save_key_vii_bool
2704     \tl_clear:N \l__enumext_store_save_key_vii_tl
2705     \tl_set:Ne \l__enumext_store_save_key_vii_tl { \__enumext_filter_save_key:n {#1} }
2706   }
```

(*End of definition for* __enumext_parse_save_key:n *and* __enumext_parse_save_key_vii:n.)

13.30.4 Internal functions to store optional arguments

__enumext_filter_save_key:n
__enumext_filter_save_key_key:n
__enumext_filter_save_key_pair:nn

The function __enumext_filter_save_key:n will be in charge of *"filtering keys"* we want to *stored* in *sequence* where {#1} represents the *optional argument* passed to the environment.

```
2707 \cs_new:Npn \__enumext_filter_save_key:n #1
2708   {
2709     \use:e
2710       {
2711         \keyval_parse:NNn
2712           \__enumext_filter_save_key_key:n
2713           \__enumext_filter_save_key_pair:nn {#1}
2714       }
2715   }
```

The function __enumext_filter_save_key_key:n will be responsible for *"filtering keys"* that are passed *"without value"* by excluding the resume, resume*, reset, reset*, no-store and base-fix keys.

```
2716 \cs_new:Npn \__enumext_filter_save_key_key:n #1
2717   {
2718     \str_case:nnF {#1}
2719       {
2720         { resume } {} { resume* } {} { reset } {} { reset* } {} { no-store } {} { base-fix } {}
2721       }
2722       { , { \exp_not:n {#1} } }
2723   }
```

The function __enumext_filter_save_key_pair:nn will be responsible for *"filtering keys"* that are passed *"with value"* by excluding the series, resume, save-ans, save-ref, save-key, check-ans, show-ans, save-pos, mark-ans, mark-pos, mark-sep, wrap-ans, mark-ans*, mark-pos*, mark-sep*, wrap-ans*, wrap-opt, save-sep, mark-ref, mini-env, mini-sep, mini-right and mini-right* keys.

```
2724 \cs_new:Npn \__enumext_filter_save_key_pair:nn #1#2
2725   {
2726     \str_case:nnF {#1}
2727       {
2728         { series    } {} { resume    } {} { save-ans   } {} { save-ref  } {}
2729         { save-key  } {} { check-ans } {} { show-ans   } {} { show-pos  } {}
2730         { mark-ans  } {} { mark-pos  } {} { mark-sep   } {} { wrap-ans  } {}
2731         { mark-ans* } {} { mark-pos* } {} { mark-sep*  } {} { wrap-ans* } {}
2732         { wrap-opt  } {} { save-sep  } {} { mark-ref   } {} { mini-env  } {}
2733         { mini-sep  } {} { mini-right } {} { mini-right* } {}
2734       }
2735       { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
2736   }
```

(*End of definition for* __enumext_filter_save_key:n, __enumext_filter_save_key_key:n, *and* __enumext_filter_-save_key_pair:nn.)

13.30.5 Function for storing content in prop list

__enumext_store_addto_prop:n
__enumext_store_addto_prop:V

The function __enumext_store_addto_prop:n stores the {⟨content⟩} in *prop list* defined by save-ans key. The *"stored content"* is retrieved by means of the \getkeyans command.

The form in which the {⟨content⟩} is *"stored"* in the *prop list* is {⟨position⟩}{⟨content⟩}. This function is used by \anskey in enumext and enumext* environments, \item* in keyans and keyans* environments and \anspic* in keyanspic environment.

```
2737 \cs_new_protected:Npn \__enumext_store_addto_prop:n #1
```

```
2738     {
2739       \prop_gput_if_not_in:cen { g__enumext_ \l__enumext_store_name_tl _prop }
2740         {
2741           \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } + 1 }
2742         }
2743         { #1 }
2744     }
2745   \cs_generate_variant:Nn \__enumext_store_addto_prop:n { V }
```

(*End of definition for* __enumext_store_addto_prop:n.)

13.30.6   Function for storing content in sequence

__enumext_store_addto_seq:n
__enumext_store_addto_seq:v
__enumext_store_addto_seq:V

The function __enumext_store_addto_seq:n stores the {⟨*content*⟩} in *sequence* defined by save-ans key. This function is used by \anskey in enumext, \item* in keyans and \anspic in keyanspic.

The form in which the {⟨*content*⟩} is stored in *sequence* is in a internal enumext or enumext* environments with the *"same structure"* in which the command was executed.
The *"stored content"* is retrieved by means of the \printkeyans command.

```
2746   \cs_new_protected:Npn \__enumext_store_addto_seq:n #1
2747     {
2748       \seq_gput_right:cn { g__enumext_ \l__enumext_store_name_tl _seq } { #1 }
2749     }
2750   \cs_generate_variant:Nn \__enumext_store_addto_seq:n { v, V }
```

(*End of definition for* __enumext_store_addto_seq:n.)

13.30.7   Functions for storing structure in the sequence

__enumext_store_level_open:
__enumext_store_level_close:

The *"storing structure"* is handled by the functions __enumext_store_level_open: and __enumext_-
store_level_close: which are executed per level within the enumext environment.

```
2751   \cs_new_protected:Nn \__enumext_store_level_open:
2752     {
2753       \bool_if:NT \l__enumext_check_answers_bool
2754         {
2755           \tl_if_empty:cTF { l__enumext_store_save_key_ \__enumext_level: _tl }
2756             {
2757               \__enumext_store_addto_seq:n
2758                 {
2759                   \item \begin{enumext}
2760                 }
2761             }
2762             {
2763               \tl_put_left:cn { l__enumext_store_save_key_ \__enumext_level: _tl }
2764                 {
2765                   \item \begin{enumext} [
2766                 }
2767               \tl_put_right:cn { l__enumext_store_save_key_ \__enumext_level: _tl }
2768                 {
2769                   ]
2770                 }
2771               \__enumext_store_addto_seq:v { l__enumext_store_save_key_ \__enumext_level: _tl }
2772             }
2773         }
2774     }
2775   \cs_new_protected:Nn \__enumext_store_level_close:
2776     {
2777       \bool_if:NT \l__enumext_check_answers_bool
2778         {
2779           \__enumext_store_addto_seq:n { \end{enumext} }
2780         }
2781     }
```

(*End of definition for* __enumext_store_level_open: *and* __enumext_store_level_close:.)

__enumext_store_level_open_vii:
__enumext_store_level_close_vii:

The *"storing structure"* is handled by the functions __enumext_store_level_open_vii: and __enumext_-
store_level_close_vii: which are executed in the enumext* environment.

```
2782   \cs_new_protected:Nn \__enumext_store_level_open_vii:
2783     {
2784       \bool_if:NT \l__enumext_check_answers_bool
2785         {
2786           \tl_if_empty:NTF \l__enumext_store_save_key_vii_tl
2787             {
```

```
2788                    \__enumext_store_addto_seq:n
2789                      {
2790                        \item \begin{enumext*}
2791                      }
2792                  }
2793                  {
2794                    \tl_put_left:Nn \l__enumext_store_save_key_vii_tl
2795                      {
2796                        \item \begin{enumext*}[
2797                      }
2798                    \tl_put_right:Nn \l__enumext_store_save_key_vii_tl
2799                      {
2800                        ]

13.30.8   Function for show marks and position

__enumext_print_keyans_box:NN
__enumext_print_keyans_box:cc

The function __enumext_print_keyans_box:NN print a box in the left margin with \l__enumext_mark_-answer_sym_tl used by the wrap-ans, show-ans and show-pos keys. The function takes two arguments:

#1 : \l__enumext_labelwidth_X_dim
#2 : \l__enumext_labelsep_X_dim

```
2813  \cs_new_protected:Nn \__enumext_print_keyans_box:NN
2814    {
2815      \mode_leave_vertical:
2816      \skip_horizontal:n { -\dim_use:N #2 }
2817      \hbox_overlap_left:n
2818        {
2819          \makebox[ \dim_use:N #1 ][ \l__enumext_mark_position_str ]
2820            {
2821              \tl_use:N \l__enumext_mark_answer_sym_tl
2822            }
2823        }
2824      \skip_horizontal:n { \dim_use:N #2 }
2825    }
2826  \cs_generate_variant:Nn \__enumext_print_keyans_box:NN { cc }
```

(*End of definition for* __enumext_print_keyans_box:NN.)

13.31   The internal label and ref

The function __enumext_store_internal_ref: handles the *"internal label and ref"* system used by the save-ref and mark-ref keys for \anskey will allow to execute \ref{⟨*store name* : *position*⟩} and will return 1.(a).i.A.

__enumext_store_internal_ref:

First we will remove the dots "." from the current ⟨*labels*⟩, we do not want to get double dots in our references, then we will place this in the variable \l__enumext_newlabel_arg_two_tl.

```
2827  \cs_new_protected:Nn \__enumext_store_internal_ref:
2828    {
2829      \cs_set_protected:Npn \__enumext_tmp:n ##1
2830        {
2831          \tl_set_eq:cc { l__enumext_label_copy_##1_tl } { l__enumext_label_##1_tl }
2832          \tl_reverse:c { l__enumext_label_copy_##1_tl }
2833          \tl_remove_once:cn { l__enumext_label_copy_##1_tl } { . }
2834          \tl_reverse:c { l__enumext_label_copy_##1_tl }
2835        }
2836      \clist_map_inline:nn { i, ii, iii, iv, vii } { \__enumext_tmp:n {##1} }
2837      \cs_set:Npn \__enumext_tmp:n ##1
2838        { . \tl_use:c { l__enumext_label_copy_ \int_to_roman:n {##1} _tl } }
```

Here we need to analyse the cases where the environment is started with enumext* and if \anskey or anskey* is running alone in it or if it is running in a nested enumext environment within the starting environment.

```
2839        \bool_lazy_all:nT
2840          {
2841            { \bool_if_p:N \g__enumext_starred_bool }
2842            { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
2843          }
2844          {
2845            \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2846              { \tl_use:N \l__enumext_label_copy_vii_tl }
2847          }
2848        \bool_lazy_all:nT
2849          {
2850            { \bool_not_p:n { \g__enumext_standar_bool } }
2851            { \bool_if_p:N \l__enumext_standar_bool }
2852            { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
2853          }
2854          {
2855            \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2856              {
2857                \tl_use:N \l__enumext_label_copy_vii_tl
2858                \int_step_function:nnN { 1 } { \l__enumext_level_int } \__enumext_tmp:n
2859              }
2860          }
```

If started with enumext and if \anskey or anskey* is running alone in it or if it is running in a nested enumext* environment within the starting environment.

```
2861        \bool_lazy_all:nT
2862          {
2863            { \bool_if_p:N \g__enumext_standar_bool }
2864            { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
2865            { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
2866          }
2867          {
2868            \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2869              {
2870                \tl_use:N \l__enumext_label_copy_i_tl
2871                \int_step_function:nnN { 2 } { \l__enumext_level_int } \__enumext_tmp:n
2872              }
2873          }
2874        \cs_set:Npn \__enumext_tmp:n ##1
2875          { \tl_use:c { l__enumext_label_copy_ \int_to_roman:n {##1} _tl } . }
2876        \bool_lazy_all:nT
2877          {
2878            { \bool_if_p:N \g__enumext_standar_bool }
2879            { \bool_if_p:N \l__enumext_starred_bool }
2880            { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
2881          }
2882          {
2883            \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2884              {
2885                \int_step_function:nnN { 1 } { \l__enumext_level_int } \__enumext_tmp:n
2886                \tl_use:N \l__enumext_label_copy_vii_tl
2887              }
2888          }
```

Now we set the variable \l__enumext_newlabel_arg_one_tl which will contain {⟨*store name* : *position*⟩}.

```
2889        \tl_put_right:Ne \l__enumext_newlabel_arg_one_tl
2890          {
2891            \l__enumext_store_name_tl \c_colon_str
2892            \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } }
2893          }
```

Now execute the function __enumext_newlabel:nn and save the result in the variable \l__enumext_-write_aux_file_tl and finally we write in the .aux file.

```
2894        \tl_put_right:Ne \l__enumext_write_aux_file_tl
2895          {
2896            \__enumext_newlabel:nn
2897              { \exp_not:V \l__enumext_newlabel_arg_one_tl }
2898              { \l__enumext_newlabel_arg_two_tl }
2899          }
2900        \l__enumext_write_aux_file_tl
```

2901 }

(*End of definition for* __enumext_store_internal_ref:.)

13.32 Common functions for \anskey and anskey* environment

__enumext_store_anskey_arg:n

The internal function __enumext_store_anskey_arg:n first we pass the {⟨*argument*⟩} to the *prop list*, then checks the state of the variable \l__enumext_store_ref_key_bool handled by the save-ref key and will call the function __enumext_store_internal_ref: for the *"internal label and ref"* system. Followed by this if the show-ans or show-pos keys are active we will show the *"wrapped"* {⟨*argument*⟩}.

```
2902 \cs_new_protected:Npn \__enumext_store_anskey_arg:n #1
2903   {
2904     \int_gincr:N \g__enumext_item_anskey_int
2905     \__enumext_store_addto_prop:n {#1}
2906     \bool_if:NT \l__enumext_store_ref_key_bool
2907       {
2908         \__enumext_store_internal_ref:
2909       }
2910     \__enumext_anskey_show_wrap_left:n { #1 }
```

Now we start processing the [⟨*key = val*⟩] passed to the command to build our \item in the variable \l__enumext_store_anskey_arg_tl which we will *"store"* in the *sequence*. First we clear the variable \l__enumext_store_anskey_arg_tl and process the ⟨*keys*⟩, if the break-col key is present and the command is running under enumext (not in enumext*) we will add \columnbreak and then \item.

```
2911     \tl_clear:N \l__enumext_store_anskey_arg_tl
2912     \bool_lazy_and:nnT
2913       { \bool_if_p:N \l__enumext_store_columns_break_bool }
2914       { \bool_not_p:n { \l__enumext_starred_bool } }
2915       {
2916         \tl_put_left:Nn \l__enumext_store_anskey_arg_tl { \columnbreak }
2917       }
2918     \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { \item }
```

If the item-join key is present and the command is running under enumext* we will add (⟨*number*⟩) to \l__enumext_store_anskey_arg_tl.

```
2919     \bool_lazy_and:nnT
2920       { \bool_not_p:n { \l__enumext_starred_bool } }
2921       { \int_compare_p:nNn { \l__enumext_store_item_join_int } > { 1 } }
2922       {
2923         \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2924           {
2925             ( \exp_not:V \l__enumext_store_item_join_int )
2926           }
2927       }
```

And now we will review the keys item-star, item-sym* and item-pos* and pass them to \l__enumext_store_anskey_arg_tl along with the {⟨*argument*⟩} for \anskey or ⟨*body*⟩ for anskey*.

```
2928     \bool_if:NTF \l__enumext_store_item_star_bool
2929       {
2930         \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { * }
2931         \tl_if_empty:NF \l__enumext_store_item_symbol_tl
2932           {
2933             \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2934               {
2935                 [ \exp_not:V \l__enumext_store_item_symbol_tl ]
2936               }
2937           }
2938         \dim_compare:nT
2939           {
2940             \l__enumext_store_item_symbol_sep_dim != \c_zero_dim
2941           }
2942           {
2943             \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2944               {
2945                 [ \exp_not:V \l__enumext_store_item_symbol_sep_dim ]
2946               }
2947           }
2948         \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#1}
2949       }
2950       {
2951         \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#1}
2952       }
```

Finally we check if the `save-ref` key are active along with the `hyperref` package load, if both conditions are met, it will create the `\hyperlink` with *"symbol"* set by `mark-ref` key and then store in *sequence*.

```
2953        \bool_lazy_and:nnT
2954          { \bool_if_p:N \l__enumext_store_ref_key_bool }
2955          { \bool_if_p:N \l__enumext_hyperref_bool }
2956          {
2957            \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2958              {
2959                \hfill \exp_not:N \hyperlink { \exp_not:V \l__enumext_newlabel_arg_one_tl }
2960                  { \exp_not:V \l__enumext_mark_ref_sym_tl }
2961              }
2962          }
2963        \__enumext_store_addto_seq:V \l__enumext_store_anskey_arg_tl
2964      }
```

(*End of definition for* `\__enumext_store_anskey_arg:n`.)

`\__enumext_anskey_show_wrap_arg:n` The function `\__enumext_anskey_show_wrap_arg:n` *"wraps"* the {⟨*argument*⟩} passed to `\anskey` and the ⟨*body*⟩ for `anskey*` when using the `wrap-ans` and `wrap-sep` keys.

```
2965  \cs_new_protected:Npn \__enumext_anskey_show_wrap_arg:n #1
2966    {
2967      \par
2968      \bool_if:NTF \l__enumext_starred_bool
2969        {
2970          \dim_compare:nNnT { \l__enumext_mark_sym_sep_dim } = { \c_zero_dim }
2971            {
2972              \dim_set:Nn \l__enumext_mark_sym_sep_dim { \l__enumext_labelsep_vii_dim }
2973            }
2974          \__enumext_print_keyans_box:NN
2975            \l__enumext_labelwidth_vii_dim \l__enumext_mark_sym_sep_dim
2976        }
2977        {
2978          \dim_compare:nNnT { \l__enumext_mark_sym_sep_dim } = { \c_zero_dim }
2979            {
2980              \dim_set:Nn \l__enumext_mark_sym_sep_dim
2981                {
2982                  \dim_use:c {l__enumext_labelsep_ \__enumext_level: _dim }
2983                }
2984            }
2985          \__enumext_print_keyans_box:cc
2986            { l__enumext_labelwidth_ \__enumext_level: _dim } { l__enumext_mark_sym_sep_dim }
2987        }
2988      \__enumext_anskey_wrapper:n { #1 }
2989    }
```

(*End of definition for* `\__enumext_anskey_show_wrap_arg:n`.)

`\__enumext_anskey_show_wrap_left:n` The function `\__enumext_anskey_show_wrap_left:n` will show the *"mark"* defined by the `mark-ans` key or the *"position"* of the {⟨*content*⟩} stored in the *prop list* when using the `show-pos` key on the left margin next to the *"wraps"* {⟨*argument*⟩} passed to `\anskey` and the ⟨*body*⟩ in `anskey*` on the right side when using the `show-ans` key.

```
2990  \cs_new_protected:Npn \__enumext_anskey_show_wrap_left:n #1
2991    {
2992      \bool_if:NT \l__enumext_show_answer_bool
2993        {
2994          \__enumext_anskey_show_wrap_arg:n { #1 }
2995        }
2996      \bool_if:NT \l__enumext_show_position_bool
2997        {
2998          \tl_set:Ne \l__enumext_mark_answer_sym_tl
2999            {
3000              \group_begin:
3001              \exp_not:N \normalfont
3002              \exp_not:N \footnotesize [ \int_eval:n
3003                {

3005                }
3006              ]
3007              \group_end:
3008            }
```

```
3009                \__enumext_anskey_show_wrap_arg:n { #1 }
3010            }
3011    }
```

(*End of definition for* __enumext_anskey_show_wrap_left:n.)

13.33 The command \anskey

Since we will be *"storing content"* in a `list` environment within *sequences* and can (more or less) manage the options passed to each level, it is necessary that we have a little more control over \item when storing.

The \anskey command will cover this point and give it similar behaviour to that of \item in the enumext and enumext* environments executed as follows \anskey[⟨*key = val*⟩]{⟨*content*⟩}.

break-col   First we'll add the keys break-col, item-join, item-star, item-sym* and item-pos*.
item-join
item-star
item-sym*
item-pos*
unknown
__enumext_anskey_unknown:n
__enumext_anskey_unknown:nn

```
3012  \keys_define:nn { enumext / anskey }
3013    {
3014      break-col .bool_set:N = \l__enumext_store_columns_break_bool,
3015      break-col .default:n  = true,
3016      break-col .value_forbidden:n = true,
3017      item-join .int_set:N  = \l__enumext_store_item_join_int,
3018      item-join .value_required:n = true,
3019      item-star .bool_set:N = \l__enumext_store_item_star_bool,
3020      item-star .default:n  = true,
3021      item-star .value_forbidden:n = true,
3022      item-sym* .tl_set:N   = \l__enumext_store_item_symbol_tl,
3023      item-sym* .value_required:n = true,
3024      item-pos* .dim_set:N  = \l__enumext_store_item_symbol_sep_dim,
3025      item-pos* .value_required:n = true,
3026      unknown    .code:n       = { \__enumext_anskey_unknown:n {#1} },
3027    }
```

The ⟨*keys*⟩ are stored in \l_keys_key_str and the value (if any) is passed as an argument to the function __enumext_anskey_unknown:n.

```

💣 The \anskey command will only be present when using the save-ans key in enumext and enumext* environments, otherwise it will return an error.

\anskey   We will first call the function __enumext_anskey_safe_outer: to be sure where we execute the command, then we will check the state of the variable \l__enumext_check_answers_bool set by the key no-store, if is true we will increment \g__enumext_item_anskey_int for the internal *"check answer"* system and execute the function __enumext_anskey_safe_inner:n to ensure that the command is not nested and that the argument is not empty, finally search the [⟨*key = val*⟩] and call the function __enumext_store_-anskey_arg:n.

```
3042  \NewDocumentCommand \anskey { o +m }
3043    {
3044      \__enumext_anskey_safe_outer:
3045      \group_begin:
3046        \bool_if:NT \l__enumext_check_answers_bool
3047          {
3048            \tl_if_novalue:nF {#1}
3049              {
3050                \keys_set:nn { enumext / anskey } {#1}
3051              }
3052            \tl_if_blank:nTF {#2}
3053              {
3054                \msg_error:nn { enumext } { anskey-empty-arg }
```

```
3055                    }
3056                    {
3057                        \__enumext_anskey_safe_inner:
3058                        \__enumext_store_anskey_arg:n {#2}
3059                    }
3060                }
3061            \group_end:
3062        }
```

(*End of definition for* \anskey. *This function is documented on page 14.*)

13.33.1   Internal functions for the command

__enumext_anskey_safe_outer:
__enumext_anskey_safe_inner:

The __enumext_store_anskey_safe_outer: function will return the appropriate messages when the command is executed outside the environment in which the save-ans key was activated.

```
3063  \cs_new_protected:Nn \__enumext_anskey_safe_outer:
3064    {
3065      \bool_if:NF \l__enumext_store_active_bool
3066        {
3067          \msg_error:nnnn { enumext } { anskey-wrong-place }{ anskey }{ enumext }
3068        }
3069      \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
3070        {
3071          \msg_error:nnnn { enumext } { command-wrong-place }{ anskey }{ keyans }
3072        }
3073      \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
3074        {
3075          \msg_error:nnnn { enumext } { command-wrong-place }{ anskey }{ keyans* }
3076        }
3077      \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
3078        {

3095          \msg_error:nne { enumext } { anskey-math-mode } { \c_backslash_str anskey }
3096        }
3097    }
```

(*End of definition for* __enumext_anskey_safe_outer: *and* __enumext_anskey_safe_inner:.)

13.34   The environment anskey*

The original implementation of the anskey* environment used non-public functions from the scontents[4] package, which was not the best approach. Fortunately LaTeX release 2025-06-01 implemented the new c-type argument in the ltcmd[13], with which we can record the ⟨*body*⟩ of the environment in *verbatim mode* and \tl_retokenize:n (wrapper around the \scantokens) provide by LaTeX3 release 2025-07-08 do the work as the original implementation.

break-col
item-join
item-star
item-sym*
item-pos*
force-eol
write-env
overwrite
unknown

First we add the same keys from the \anskey command along with the force-eol, write-env and overwrite keys that were in the original implementation that used the scontents support package for these.

```
3098  \keys_define:nn { enumext / anskey* }
3099    {
3100      break-col .bool_set:N = \l__enumext_store_columns_break_bool,
3101      break-col .default:n  = true,
3102      break-col .value_forbidden:n = true,
3103      item-join .int_set:N  = \l__enumext_store_item_join_int,
```

```
3104        item-join .value_required:n = true,
3105        item-star .bool_set:N = \l__enumext_store_item_star_bool,
3106        item-star .default:n  = true,
3107        item-star .value_forbidden:n = true,
3108        item-sym* .tl_set:N    = \l__enumext_store_item_symbol_tl,
3109        item-sym* .value_required:n = true,
3110        item-pos* .dim_set:N  = \l__enumext_store_item_symbol_sep_dim,
3111        item-pos* .value_required:n = true,
3112        force-eol .bool_set:N = \l__enumext_anskey_env_force_eol_bool,
3113        force-eol .initial:n  = false,
3114        force-eol .default:n  = true,
3115        write-env .code:n     = {
3116                                  \bool_set_true:N \l__enumext_write_anskey_env_bool
3117                                  \tl_set:Nn \l__enumext_write_anskey_env_file_name_tl {#1}
3118                              },
3119        write-env .value_required:n = true,
3120        overwrite .bool_set:N = \l__enumext_anskey_env_overwrite_bool,
3121        overwrite .initial:n  = false,
3122        overwrite .default:n  = true,
3123        unknown   .code:n     = { \__enumext_anskey_env_unknown:n {#1} },
3124      }
```

(*End of definition for* break-col *and others.*)

__enumext_anskey_env_unknown:n   The ⟨*keys*⟩ are stored in \l_keys_key_str and the value (if any) is passed as an argument to the function
__enumext_anskey_env_unknown:nn   __enumext_anskey_env_unknown:n.

```
3125 \cs_new_protected:Npn \__enumext_anskey_env_unknown:n #1
3126   {
3127      \exp_args:NV \__enumext_anskey_env_unknown:nn \l_keys_key_str {#1}
3128   }
3129 \cs_new_protected:Npn \__enumext_anskey_env_unknown:nn #1#2
3130   {
3131      \tl_if_blank:nTF {#2}
3132        {
3133          \msg_error:nnn { enumext } { anskey-env-key-unknown } {#1}
3134        }
3135        {
3136          \msg_error:nnnn { enumext } { anskey-env-key-value-unknown } {#1} {#2}
3137        }
3138   }
```

(*End of definition for* __enumext_anskey_env_unknown:n *and* __enumext_anskey_env_unknown:nn.)

__enumext_anskey_env_file_if_writable:n   The conditional function __enumext_anskey_env_file_if_writable:n used by the write-env and
__enumext_anskey_env_file_if_writable:nT   overwrite keys in the anskey* environment to determine whether the output file is written or overwritten.
__enumext_anskey_env_file_if_writable:nF
__enumext_anskey_env_file_if_writable:nTF

```
3139 \prg_new_protected_conditional:Npnn \__enumext_anskey_env_file_if_writable:n #1 { T, F, TF }
3140   {
3141      \bool_if:NTF \l__enumext_write_anskey_env_bool
3142        {
3143          \file_if_exist:nTF {#1}
3144            {
3145              \bool_if:NTF \l__enumext_anskey_env_overwrite_bool
3146                {
3147                  \msg_warning:nne { enumext } { overwrite-file } {#1}
3148                  \prg_return_true:
3149                }
3150                {
3151                  \msg_warning:nne { enumext } { not-writing } {#1}
3152                  \prg_return_false:
3153                }
3154            }
3155            {
3156              \msg_warning:nne { enumext } { writing-file } {#1}
3157              \prg_return_true:
3158            }
3159        }
3160        { \prg_return_false: }
3161   }
```

The __enumext_anskey_env_file_write:nn function is used by the write-env key in the anskey* environment to write the output file with the ⟨*body*⟩ of the environment.

```
3162  \cs_new_protected:Npn \__enumext_anskey_env_file_write:nn #1#2

3187              \__enumext_store_anskey_env:n {#2}
3188            }
3189        }
3190    } { }
```

(*End of definition for* anskey*. *This function is documented on page 15.*)

13.34.1   Internal functions for the environment

__enumext_anskey_env_safe_outer:
__enumext_anskey_env_safe_inner:
__enumext_store_anskey_env:n
    The function __enumext_store_anskey_safe_outer: will return the appropriate messages when anskey* is executed outside the environment in which the save-ans key was activated or within the keyans, keyans* or keyanspic environments.

```
3191  \cs_new_protected:Nn \__enumext_anskey_env_safe_outer:
3192    {
3193      \bool_if:NF \l__enumext_store_active_bool
3194        {
3195          \msg_error:nnn { enumext } { anskey-env-error } { anskey* }
3196        }
3197      \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
3198        {
3199          \msg_error:nnn { enumext } { anskey-env-wrong }{ keyans }
3200        }
3201      \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
3202        {
3203          \msg_error:nnn { enumext } { anskey-env-wrong } { keyans* }
3204        }
3205      \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
3206        {
3207          \msg_error:nnn { enumext } { anskey-env-wrong } { keyanspic }
3208        }
3209    }
```

The function __enumext_anskey_env_safe_inner: will first check if preceded by a not numbered \item or if it is in *math mode* returning the appropriate messages.

```
3210  \cs_new_protected:Nn \__enumext_anskey_env_safe_inner:
3211    {
3212      \bool_if:NF \l__enumext_item_number_bool
3213        {
3214          \msg_error:nn { enumext } { anskey-unnumber-item }
```

```
3215            }
3216         \mode_if_math:T
3217            {
3218               \msg_error:nnn { enumext } { anskey-math-mode } { anskey* }
3219            }
3220         }
```

The `\__enumext_store_anskey_env:n` function will first pass the c-type argument ⟨*body*⟩ to the variable `\l__enumext_store_anskey_env_tl` and replace the macro `\obeyedline` with `^^J` and then execute the `write-env` and `overwrite` keys, check the state of the variable `\l__enumext_anskey_env_force_eol_-bool` managed by the `force-eol` key and we will add `\c__enumext_anskey_env_hidden_space_str` if necessary. Finally we will use `\exp_args:Ne` on the `\__enumext_store_anskey_arg:n` to expand the `\tl_retokenize:n` function which rescans the `\l__enumext_store_anskey_env_tl` variable before processing it.

```
3221  \cs_new_protected:Npn \__enumext_store_anskey_env:n #1
3222     {
3223        \tl_set:Nn \l__enumext_store_anskey_env_tl {#1}
3224        \RenewDocumentCommand \obeyedline { } { \iow_char:N \^^J }
3225        \tl_replace_all:Nee \l__enumext_store_anskey_env_tl { \obeyedline } { \iow_char:N \^^J }
3226        \__enumext_anskey_env_file_write:VV
3227           \l__enumext_write_anskey_env_file_name_tl \l__enumext_store_anskey_env_tl
3228        \bool_if:NF \l__enumext_anskey_env_force_eol_bool
3229           {
3230              \tl_put_right:Ne \l__enumext_store_anskey_env_tl
3231                 {
3232                    \c__enumext_anskey_env_hidden_space_str
3233                 }
3234           }
3235        \exp_args:Ne
3236           \__enumext_store_anskey_arg:n
3237              {
3238                 \tl_retokenize:n { \l__enumext_store_anskey_env_tl }
3239              }
3240     }
```

🛈 Since `\obeyedline` can be redefined by the user, for example to `\mbox{}\par`, it is necessary to redefine it to `^^J` in order to use `\tl_replace_all:Nee` otherwise it returns an error.

(*End of definition for* `\__enumext_anskey_env_safe_outer:` , `\__enumext_anskey_env_safe_inner:` , *and* `\__enumext_store_-anskey_env:n`.)

13.35 Executing check-ans system and write .log

`\__enumext_execute_after_env:` The `\__enumext_execute_after_env:` function will first return the appropriate message for the end of the environment in which the `save-ans` key is being executed, then call the `\__enumext_item_answer_diff:` function and then will write the values of the global variables used to the `.log` file. If the key `check-ans` is active it will execute the function `\__enumext_check_ans_show:` and show the result in the terminal, otherwise it will execute the function `\__enumext_check_ans_log:` and write the results in the `.log` file and finally we execute the function `\__enumext_reset_global_vars:` returning the used variables to their original state.

```
3241  \cs_new_protected:Nn \__enumext_execute_after_env:
3242     {
3243        \int_compare:nNnT { \l__enumext_level_int } = { 0 }
3244           {
3245              \tl_if_empty:NF \g__enumext_store_name_tl
3246                 {
3247                    \__enumext_stop_save_ans_msg:
3248                    \__enumext_item_answer_diff:
3249                    \__enumext_log_global_vars:
3250                    \__enumext_log_answer_vars:
3251                    \bool_if:NTF \g__enumext_check_ans_key_bool
3252                       {
3253                          \__enumext_check_ans_show:
3254                       }
3255                       { \__enumext_check_ans_log: }
3256                 }
3257              \__enumext_reset_global_vars:
3258           }
3259     }
```

🛈 This function is passed to the function `\__enumext_after_env:nn` for the environments enumext (§13.42) and enumext* (§13.47) and it is executed only when the environments are not nested or at some level of these..

(*End of definition for* __enumext_execute_after_env:.)

13.36 Common functions for keyans, keyans* and keyanspic

13.36.1 Storing content in prop list

__enumext_keyans_addto_prop:n

The function __enumext_keyans_addto_prop:n will pass the the current ⟨*label*⟩ for \item* in keyans environment and the current ⟨*label*⟩ for \anspic* in keyanspic environment followed by the ⟨*contents*⟩ of the *optional argument* of both commands to the \l__enumext_store_current_label_tl variable, which will be stored to the *prop list* defined by the save-ans key using the function __enumext_store_addto_-prop:V.

```
3260 \cs_new_protected:Npn \__enumext_keyans_addto_prop:n #1
3261   {
3262     \tl_clear:N \l__enumext_store_current_label_tl
3263     \int_compare:nNnTF { \l__enumext_keyans_pic_level_int } = { 1 }
3264       {
3265         \tl_put_right:Ne \l__enumext_store_current_label_tl { \l__enumext_label_vi_tl }
3266       }
3267       {
3268         \tl_put_right:Ne \l__enumext_store_current_label_tl { \l__enumext_label_v_tl }
3269       }
```

If the *optional argument* is present and the save-sep key is not empty, we save it.

```
3270     \tl_if_novalue:nF { #1 }
3271       {
3272         \tl_if_empty:NF \l__enumext_store_keyans_item_opt_sep_v_tl
3273           {
3274             \tl_put_right:NV \l__enumext_store_current_label_tl \l__enumext_store_keyans_item_opt_
3275           }
3276         \tl_put_right:Nn \l__enumext_store_current_label_tl { #1 }
3277       }
3278     \__enumext_store_addto_prop:V \l__enumext_store_current_label_tl
3279   }
```

(*End of definition for* __enumext_keyans_addto_prop:n.)

13.36.2 The save-ref key for keyans, keyans* and keyanspic

The *"internal label and ref"* system for the keyans, keyans* and keyanspic environments has *slight differences* with the one implemented for \anskey basically because in this environments the interest is in the current ⟨*label*⟩ for \item* and \anspic* with the ⟨*contents*⟩ of the *optional argument*. The mechanism defined here will allow to execute \ref{⟨*store name : position*⟩} and will return 1. (A).

__enumext_keyans_store_ref:
__enumext_keyans_store_ref_aux_i:
__enumext_keyans_store_ref_aux_ii:

The function __enumext_keyans_store_ref: handles the *"internal label and ref"* system used by the save-ref key for \item* and \anspic* commands. First we will create copies of the current ⟨*labels*⟩ and remove the dots "." from them, we do not want to get double dots in references.

```
3280 \cs_new_protected:Nn \__enumext_keyans_store_ref:
3281   {
3282     \bool_if:NT \l__enumext_store_ref_key_bool
3283       {
3284         \cs_set_protected:Npn \__enumext_tmp:n ##1
3285           {
3286             \tl_set_eq:cc { l__enumext_label_copy_##1_tl } { l__enumext_label_##1_tl }
3287             \tl_reverse:c { l__enumext_label_copy_##1_tl }
3288             \tl_remove_once:cn { l__enumext_label_copy_##1_tl } { . }
3289             \tl_reverse:c { l__enumext_label_copy_##1_tl }
3290           }
3291         \clist_map_inline:nn { i, v, vi, vii, viii } { \__enumext_tmp:n {##1} }
3292         \__enumext_keyans_store_ref_aux_i:
3293       }
3294   }
```

The auxiliary function __enumext_keyans_store_ref_aux_i: set the variable \l__enumext_newlabel_-arg_one_tl which will contain {⟨*store name : position*⟩} analyzing whether the environment in which they are executed is enumext* or enumext.

```
3295 \cs_new_protected:Nn \__enumext_keyans_store_ref_aux_i:
3296   {
3297     \bool_if:NT \g__enumext_starred_bool
3298       {
3299         \tl_set_eq:NN \l__enumext_label_copy_i_tl \l__enumext_label_copy_vii_tl
3300       }
3301     \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
3302       {
```

```
3303        \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
3304          { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_vi_tl }
3305      }
3306    \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
3307      {
3308        \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
3309          { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_v_tl }
3310      }
3311    \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
3312      {
3313        \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
3314          { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_viii_tl }
3315      }
3316    \tl_put_right:Ne \l__enumext_newlabel_arg_one_tl
3317      {
3318        \l__enumext_store_name_tl \c_colon_str
3319        \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } }
3320      }
3321    \__enumext_keyans_store_ref_aux_ii:
3322  }
```

Now auxiliary function `\__enumext_keyans_store_ref_aux_ii:` save the result in the variable `\l__enumext_write_aux_file_tl` and finally we write in the .aux file.

```
3323 \cs_new_protected:Nn \__enumext_keyans_store_ref_aux_ii:
3324  {
3325    \tl_put_right:Ne \l__enumext_write_aux_file_tl
3326      {
3327        \__enumext_newlabel:nn
3328          { \exp_not:V \l__enumext_newlabel_arg_one_tl }
3329          { \l__enumext_newlabel_arg_two_tl }
3330      }
3331    \l__enumext_write_aux_file_tl
3332  }
```

(*End of definition for* `\__enumext_keyans_store_ref:`, `\__enumext_keyans_store_ref_aux_i:`, *and* `\__enumext_keyans_-store_ref_aux_ii:`.)

13.36.3 Storing content in sequence

`\__enumext_keyans_addto_seq:n`
`\__enumext_keyans_addto_seq_link:`

The function `\__enumext_keyans_addto_seq:n` will pass the contents of the current ⟨*label*⟩ `\l__enumext_label_v_tl` for the keyans environment and the `\l__enumext_label_vi_tl` for the keyanspic environment when using `\item*` and `\anspic*`, followed by the ⟨*contents*⟩ of the *optional argument* of both commands to the `\l__enumext_store_current_label_tl` variable to the sequence defined by the save-ans key.

```
3333 \cs_new_protected:Npn \__enumext_keyans_addto_seq:n #1
3334  {
3335    \tl_clear:N \l__enumext_store_current_label_tl
3336    \int_compare:nNnTF { \l__enumext_keyans_pic_level_int } = { 1 }
3337      {
3338        \tl_put_right:Ne \l__enumext_store_current_label_tl { \item \l__enumext_label_vi_tl }
3339      }
3340      {
3341        \tl_put_right:Ne \l__enumext_store_current_label_tl { \item \l__enumext_label_v_tl }
3342      }
3343    \tl_if_novalue:nF { #1 }
3344      {
3345        \tl_if_empty:NF \l__enumext_store_keyans_item_opt_sep_v_tl
3346          {
3347            \tl_put_right:NV \l__enumext_store_current_label_tl \l__enumext_store_keyans_item_opt_
3348          }
3349        \tl_put_right:Nn \l__enumext_store_current_label_tl { #1 }
3350      }
3351    \__enumext_keyans_addto_seq_link:
3352  }
```

Checks if the save-ref key is active along with the hyperref package load, if both conditions are met, it will create the `\hyperlink` and then store using the `\__enumext_store_addto_seq:V` function. Finally, copy the contents of the variable `\l__enumext_store_current_label_tl` into the global variable `\g__enumext_check_ans_item_tl` to be used by the function `\__enumext_check_starred_cmd:n` and increment the value of the integer variable `\g__enumext_item_anskey_int` handled by the check-ans key.

```
3353 \cs_new_protected:Nn \__enumext_keyans_addto_seq_link:
```

```
3354    {
3355      \bool_lazy_and:nnT
3356        { \bool_if_p:N \l__enumext_store_ref_key_bool }
3357        { \bool_if_p:N \l__enumext_hyperref_bool }
3358        {
3359          \tl_put_right:Ne \l__enumext_store_current_label_tl
3360            {
3361              \hfill \exp_not:N \hyperlink
3362                {
3363                  \exp_not:V \l__enumext_newlabel_arg_one_tl
3364                }
3365                { \exp_not:V \l__enumext_mark_ref_sym_tl }
3366            }
3367        }
3368      \__enumext_store_addto_seq:V \l__enumext_store_current_label_tl
3369      \bool_if:NT \l__enumext_check_answers_bool
3370        {
3371          \int_gincr:N \g__enumext_item_anskey_int
3372        }
3373    }
```

(*End of definition for* __enumext_keyans_addto_seq:n *and* __enumext_keyans_addto_seq_link:*.*)

13.36.4   The show-ans and show-pos keys for keyans and keyanspic

__enumext_keyans_save_item_opt:n
__enumext_keyans_show_item_opt:
__enumext_keyans_show_item_opt_viii:

The function __enumext_keyans_save_item_opt:n will save the optional argument of \item* and \anspic* in the variable \l__enumext_store_current_opt_arg_tl.

```
3374  \cs_new_protected:Npn \__enumext_keyans_save_item_opt:n #1
3375    {
3376      \tl_if_novalue:nF { #1 }
3377        {
3378          \tl_set:Nn \l__enumext_store_current_opt_arg_tl { #1 }
3379        }
3380    }
```

The function __enumext_keyans_show_item_opt: will print the optional arguments of \item* and \anspic* when the show-ans or show-pos keys are set next to the key wrap-opt in keyans and keyanspic environments.

```
3381  \cs_new_protected:Nn \__enumext_keyans_show_item_opt:
3382    {
3383      \tl_if_empty:NF \l__enumext_store_current_opt_arg_tl
3384        {
3385          \bool_lazy_or:nnT
3386            { \bool_if_p:N \l__enumext_show_answer_bool }
3387            { \bool_if_p:N \l__enumext_show_position_bool }
3388            {
3389              \__enumext_keyans_wrapper_opt_v:n
3390                { \l__enumext_store_current_opt_arg_tl } \c_space_tl
3391            }
3392        }
3393    }
```

The function __enumext_keyans_show_item_opt_viii: will print the optional argument of \item* when the show-ans or show-pos keys are set next to the key wrap-opt in keyans* environment.

```
3394  \cs_new_protected:Nn \__enumext_keyans_show_item_opt_viii:
3395    {
3396      \tl_if_empty:NF \l__enumext_store_current_opt_arg_tl
3397        {
3398          \bool_lazy_or:nnT
3399            { \bool_if_p:N \l__enumext_show_answer_bool }
3400            { \bool_if_p:N \l__enumext_show_position_bool }
3401            {
3402              \__enumext_keyans_wrapper_opt_viii:n
3403                { \l__enumext_store_current_opt_arg_tl } \c_space_tl
3404            }
3405        }
3406    }
```

(*End of definition for* __enumext_keyans_save_item_opt:n*,* __enumext_keyans_show_item_opt:*, and* __enumext_keyans_-show_item_opt_viii:*.*)

`\__enumext_keyans_pos_mark_set:`
`\__enumext_keyans_show_ans:`
`\__enumext_keyans_show_pos:`

The function `\__enumext_keyans_pos_mark_set:` adjusts the horizontal spaces for the `mark-sep*` key taking into account the value of the `align` key and the width of ⟨*label*⟩.

```
3407  \cs_new_protected:Nn \__enumext_keyans_pos_mark_set:
3408    {
3409      \__enumext_label_width_by_box:Nn
3410        \l__enumext_mark_sep_tmpa_dim { \l__enumext_label_v_tl }
3411      \str_case:Vn \l__enumext_align_label_pos_v_str
3412        {
3413          { l }
3414              {
3415                \dim_set:Nn \l__enumext_mark_sep_tmpb_dim { \c_zero_dim }
3416              }
3417          { r }
3418              {
3419                \dim_set:Nn \l__enumext_mark_sep_tmpb_dim
3420                  { \l__enumext_labelwidth_v_dim - \l__enumext_mark_sep_tmpa_dim }
3421              }
3422          { c }
3423              {
3424                \dim_set:Nn \l__enumext_mark_sep_tmpb_dim
3425                  { 0.5\l__enumext_labelwidth_v_dim - 0.5\l__enumext_mark_sep_tmpa_dim }
3426              }
3427        }
```

Here we set the default values for the key `mark-ans*`, `mark-sep*` and `mark-pos*`.

```
3428      \dim_compare:nNnT { \l__enumext_mark_sym_sep_v_dim } = { \c_zero_dim }
3429        {
3430          \dim_set:Nn \l__enumext_mark_sym_sep_v_dim { \l__enumext_labelsep_v_dim }
3431        }
3432      \tl_set_eq:NN \l__enumext_mark_answer_sym_tl \l__enumext_mark_answer_sym_v_tl
3433      \dim_add:Nn \l__enumext_mark_sym_sep_v_dim { \l__enumext_mark_sep_tmpb_dim }
3434      \str_set_eq:NN \l__enumext_mark_position_str \l__enumext_mark_position_v_str
3435    }
```

The function `\__enumext_keyans_show_ans:` will print the ⟨*symbol*⟩ set by the `mark-ans*` key when the `show-ans` key is active.

```
3436  \cs_new_protected:Nn \__enumext_keyans_show_ans:
3437    {
3438      \bool_lazy_all:nT
3439        {
3440          { \bool_if_p:N \l__enumext_show_answer_bool   }
3441          { \bool_if_p:N \l__enumext_item_wrap_key_bool }
3442        }
3443        {
3444          \__enumext_keyans_pos_mark_set:
3445          \__enumext_print_keyans_box:NN
3446            \l__enumext_labelwidth_v_dim \l__enumext_mark_sym_sep_v_dim
3447        }
3448    }
```

The function `\__enumext_keyans_show_pos:` will print the ⟨*position*⟩ of the stored content in *prop list*. Need add `1` to `\g__enumext_`⟨*store name*⟩`_prop` for `keyans` environment.

```
3449  \cs_new_protected:Nn \__enumext_keyans_show_pos:
3450    {
3451      \int_compare:nNnTF { \l__enumext_keyans_level_int } = { 1 }
3452        {
3453          \int_incr:N \l__enumext_show_pos_tmp_int
3454        }
3455        {
3456          \int_zero:N \l__enumext_show_pos_tmp_int
3457        }
3458      \bool_lazy_all:nT
3459        {

3479    }
3480 }
```

(*End of definition for* __enumext_keyans_pos_mark_set:, __enumext_keyans_show_ans:, *and* __enumext_keyans_show_-
pos:.)

13.37 Redefining \item and \makelabel in enumext

Redefining the \item command is not as simple as I thought. This command works in conjunction with the \makelabel command so I have to redefine both of them, in addition to this, we will have to use a couple of *global* variables to pass the values from one command to the other.

When *labeling* PDF is active \makelabel is redefined as \hss #1 and the only way to get the align key to work correctly is to redefine \makelabel using \makebox. The best way to implement this is to use the conditional command \IfDocumentMetadataTF to force this redefinition and the dedicated mode-box key to manually activate it by the user.

The \item and \item[⟨*custom*⟩] commands work in the usual way on enumext and we will add \item*, \item*[⟨*symbol*⟩] and \item*[⟨*symbol*⟩][⟨*offset*⟩].

__enumext_default_item:n First we will see if the *optional argument* is present, if it is NOT present we will check the state of the variable \l__enumext_check_answers_bool set by the key no-store, set the boolean variable \l__enumext_-wrap_label_X_bool to "true" for the key wrap-label and execute __enumext_item_std:w and the key itemindent, otherwise we will check the state of the boolean variable \l__enumext_wrap_label_opt_-X_bool set by the key wrap-label* and execute __enumext_item_std:w with the *optional argument* and the key itemindent.

```
3481 \cs_new_protected:Npn \__enumext_default_item:n #1
3482    {
3483        \tl_if_novalue:nTF {#1}
3484            {
3485                \bool_if:NT \l__enumext_check_answers_bool
3486                    {
3487                        \int_gincr:N \g__enumext_item_number_int
3488                        \bool_set_true:N \l__enumext_item_number_bool
3489                    }
3490                \bool_set_true:c { l__enumext_wrap_label_ \__enumext_level: _bool }
3491                \__enumext_item_std:w \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl }
3492            }
3493            {
3494                \bool_set_eq:cc
3495                    { l__enumext_wrap_label_ \__enumext_level: _bool }
3496                    { l__enumext_wrap_label_opt_ \__enumext_level: _bool }
3497                \__enumext_item_std:w [#1] \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl
3498            }
3499    }
```

(*End of definition for* __enumext_default_item:n.)

__enumext_item_starred_exec:nn The \item*, \item*[⟨*symbol*⟩] and \item*[⟨*symbol*⟩][⟨*offset*⟩] works like the *numbered* \item, but
__enumext_item_starred_exec: placing a ⟨*symbol*⟩ to the "*left*" of the ⟨*label*⟩ separated from it by the value the second *optional argument* ⟨*offset*⟩.

#1: \l__enumext_item_symbol_X_tl
#2: \l__enumext_item_symbol_sep_X_dim

First we will make a copy of \l__enumext_item_symbol_X_tl which is set by the key item-sym* or passed as "*first*" *optional argument* in the global variable \g__enumext_item_symbol_aux_tl, followed by setting the variable \l__enumext_item_symbol_sep_X_dim set by the key item-pos* or by the "*second*" *optional argument*, then we will see the state of the variable \l__enumext_check_answers_bool set by the key no-store, set the boolean variable \l__enumext_wrap_label_X_bool to "true" for the key wrap-label and execute __enumext_item_std:w and the key itemindent.

```
3500 \cs_new_protected:Npn \__enumext_item_starred_exec:nn #1 #2
3501    {
3502        \tl_if_novalue:nTF {#1}
```

```
3503        {
3504          \tl_gset_eq:Nc
3505            \g__enumext_item_symbol_aux_tl { l__enumext_item_symbol_ \__enumext_level: _tl }
3506        }
3507        {
3508          \tl_gset:Nn \g__enumext_item_symbol_aux_tl {#1}
3509        }
3510      \tl_if_novalue:nTF {#2}
3511        {
3512          \dim_set_eq:cc
3513            { l__enumext_item_symbol_sep_ \__enumext_level: _dim }
3514            { l__enumext_labelsep_ \__enumext_level: _dim }
3515        }
3516        {
3517          \dim_set:cn { l__enumext_item_symbol_sep_ \__enumext_level: _dim } {#2}
3518        }
3519      \bool_if:NT \l__enumext_check_answers_bool
3520        {
3521          \int_gincr:N \g__enumext_item_number_int
3522          \bool_set_true:N \l__enumext_item_number_bool
3523        }
3524      \bool_set_true:c { l__enumext_wrap_label_ \__enumext_level: _bool }
3525      \__enumext_item_std:w \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl }
3526    }
```

The function `\__enumext_item_starred_exec:` will be responsible for executing `\item*` for the enumext environment.

```
3527  \cs_new_protected:Nn \__enumext_item_starred_exec:
3528    {
3529      \tl_if_empty:cF { l__enumext_item_symbol_ \__enumext_level: _tl }
3530        {
3531          \mode_leave_vertical:
3532          \skip_horizontal:n { -\dim_use:c { l__enumext_item_symbol_sep_ \__enumext_level: _dim } }
3533          \hbox_overlap_left:n { \g__enumext_item_symbol_aux_tl }
3534          \skip_horizontal:n { \dim_use:c { l__enumext_item_symbol_sep_ \__enumext_level: _dim } }
3535        }
3536    }
```

(*End of definition for* `\__enumext_item_starred_exec:nn` *and* `\__enumext_item_starred_exec:.`)

`\__enumext_redefine_item:` The function `\__enumext_redefine_item:` will redefine the `\item` command in the enumext environment adding `\item*`. This function are passed to `\__enumext_list_arg_two_X:` used in the definition of the enumext environment (§13.42).

```
3537  \cs_new_protected:Nn \__enumext_redefine_item:
3538    {
3539      \RenewDocumentCommand \item { s o o }
3540        {
3541          \bool_if:nTF {##1}
3542            {
3543              \__enumext_item_starred_exec:nn {##2} {##3}
3544            }
3545            { \__enumext_default_item:n {##2} }
3546        }
3547    }
```

(*End of definition for* `\__enumext_redefine_item:.`)

`\__enumext_make_label:`
`\__enumext_make_label_std:`
`\__enumext_make_label_box:`
The function `\__enumext_make_label:` redefine `\makelabel` for the keys mode-box, align, font, wrap-label, wrap-label* and `\item*` for enumext environment. This function are passed to `\__enumext_-list_arg_two_X:` used in the definition of the enumext environment (§13.42).

```
3548  \cs_new_protected:Nn \__enumext_make_label:
3549    {
3550      \IfDocumentMetadataTF
3551        {
3552          \__enumext_make_label_box:
3553        }
3554        {
3555          \bool_if:NTF \l__enumext_mode_box_bool
3556            {
3557              \__enumext_make_label_box:
3558            }
```

```
3559              {
3560                  \__enumext_make_label_std:
3561              }
3562          }
3563      }
```

Standard definition when \DocumentMetadata is not active.

```
3564 \cs_new_protected:Nn \__enumext_make_label_std:
3565     {
3566         \RenewDocumentCommand \makelabel { m }
3567             {
3568                 \tl_use:c { l__enumext_label_fill_left_ \__enumext_level: _tl }
3569                 \__enumext_item_starred_exec:
3570                 \tl_use:c { l__enumext_label_font_style_ \__enumext_level: _tl }
3571                 \bool_if:cTF { l__enumext_wrap_label_ \__enumext_level: _bool }
3572                     {
3573                         \use:c { __enumext_wrapper_label_ \__enumext_level: :n } { ##1 }
3574                     }
3575                     { ##1 }
3576                 \tl_use:c { l__enumext_label_fill_right_ \__enumext_level: _tl }
3577                 \tl_gclear:N \g__enumext_item_symbol_aux_tl
3578             }
3579     }
```

Definition using \makebox when \DocumentMetadata is active or mode-box is active.

🔹 Here it is necessary to use \strut\smash to maintain text *alignment* in case the user wants to use \labelbx for example. In my experiments with *mimicking* the description environment it was the only way out and it seems to have no adverse effects and may serve in the future as a basis for a more generic list environment package than enumext.

```
3580 \cs_new_protected:Nn \__enumext_make_label_box:
3581     {
3582         \RenewDocumentCommand \makelabel { m }
3583             {
3584                 \strut\smash
3585                     {
3586                         \makebox
3587                             [ \dim_use:c { l__enumext_labelwidth_ \__enumext_level: _dim } ]
3588                             [ \str_use:c { l__enumext_align_label_pos_ \__enumext_level: _str } ]
3589                             {
3590                                 \__enumext_item_starred_exec:
3591                                 \tl_use:c { l__enumext_label_font_style_ \__enumext_level: _tl }
3592                                 \bool_if:cTF { l__enumext_wrap_label_ \__enumext_level: _bool }
3593                                     {
3594                                         \use:c { __enumext_wrapper_label_ \__enumext_level: :n } { ##1 }
3595                                     }
3596                                     { ##1 }
3597                                 \tl_gclear:N \g__enumext_item_symbol_aux_tl
3598                             }
3599                     } % close smash
3600             }
3601     }
```

(*End of definition for* __enumext_make_label:, __enumext_make_label_std:, *and* __enumext_make_label_box:.)

13.38   Setting `item-sym*` and `item-pos*` keys

In order to have a cleaner implementation of \item* for the enumext and enumext* environments it is best to define a couple of keys that allow us to control and set by default the ⟨*symbol*⟩ and its ⟨*offset*⟩.

item-sym*   Define and set item-sym* and item-pos* keys for enumext and enumext*.
item-pos*
```
3602 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
3603     {
3604         \keys_define:nn { enumext / #1 }
3605             {
3606                 item-sym* .tl_set:c  = { l__enumext_item_symbol_#2_tl },
3607                 item-sym* .value_required:n = true,
3608                 item-sym* .initial:n  = {\textborn},
3609                 item-pos* .dim_set:c  = { l__enumext_item_symbol_sep_#2_dim },
3610                 item-pos* .value_required:n = true,
3611             }
3612     }
3613 \clist_map_inline:nn
3614     {
```

```
3615         {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {enumext*}{vii}
3616     }
3617   { \__enumext_tmp:nn #1 }
```

(*End of definition for* item-sym* *and* item-pos*.)

13.39   Handling unknown keys

At this point in the code I already know that I will NOT add more ⟨keys⟩ for and since I have already been quite *paranoid and restrictive* with the definitions of environments and commands, the only thing left to do is do it with the ⟨keys⟩ (you have to be consistent in life).

💣 Well, the paragraph above is not so real, after all I had to add more ⟨keys⟩ than I had planned, not everything turns out the way one thinks in life.

13.39.1   Handling unknown keys for keyans, keyans* and keyanspic

unknown
__enumext_keyans_unknown_keys:n
__enumext_keyans_unknown_keys:nn

Define and set unknown key for keyans, keyans* and keyanspic environments. Here it is necessary to set \l__enumext_envir_name_tl in case an unknown key is passed using \setenumext.

```
3618 \cs_set_protected:Npn \__enumext_tmp:n #1
3619   {
3620     \keys_define:nn { enumext / #1 }
3621       {
3622         unknown .code:n = {
3623                        \tl_set:Nn \l__enumext_envir_name_tl {#1}
3624                        \__enumext_keyans_unknown_keys:n {##1}
3625                     },
3626       }
3627   }
3628 \clist_map_inline:nn { keyans, keyans*, keyanspic } { \__enumext_tmp:n {#1} }
```

Internal functions for handling unknown key.

```
3629 \cs_new_protected:Npn \__enumext_keyans_unknown_keys:n #1
3630   {
3631     \exp_args:NV \__enumext_keyans_unknown_keys:nn \l_keys_key_str {#1}
3632   }
3633 \cs_new_protected:Npn \__enumext_keyans_unknown_keys:nn #1#2
3634   {
3635     \tl_if_blank:nTF {#2}
3636       {
3637         \msg_error:nne { enumext } { keyans-unknown-key } {#1}
3638       }
3639       {
3640         \msg_error:nnee { enumext } { keyans-unknown-key-value } {#1} {#2}
3641       }
3642   }
```

(*End of definition for* unknown *,* __enumext_keyans_unknown_keys:n *, and* __enumext_keyans_unknown_keys:nn*.*)

13.39.2   Handling unknown keys for enumext*

unknown
__enumext_starred_unknown_keys:n
__enumext_starred_unknown_keys:nn

Define and set unknown key for enumext* environment.

```
3643 \keys_define:nn { enumext / enumext* }
3644   {
3645     unknown .code:n = {
3646                    \tl_set:Nn \l__enumext_envir_name_tl { enumext* }
3647                    \__enumext_starred_unknown_keys:n {#1}
3648                 },
3649   }
```

Internal functions for handling unknown key.

```
3650 \cs_new_protected:Npn \__enumext_starred_unknown_keys:n #1
3651   {
3652     \exp_args:NV \__enumext_starred_unknown_keys:nn \l_keys_key_str {#1}
3653   }
3654 \cs_new_protected:Npn \__enumext_starred_unknown_keys:nn #1#2
3655   {
3656     \tl_if_blank:nTF {#2}
3657       {
3658         \msg_error:nne { enumext } { starred-unknown-key } {#1}
3659       }
3660       {
3661         \msg_error:nnee { enumext } { starred-unknown-key-value } {#1} {#2}
3662       }
3663   }
```

(*End of definition for* unknown *,* __enumext_starred_unknown_keys:n *, and* __enumext_starred_unknown_keys:nn*.*)

13.39.3 Handling unknown keys for enumext

unknown
__enumext_standar_unknown_keys:n
__enumext_standar_unknown_keys:nn

Defines and set the key unknown for enumext environment.

```
3664 \cs_set_protected:Npn \__enumext_tmp:n #1
3665   {
3666     \keys_define:nn { enumext / level-#1 }
3667       {
3668         unknown .code:n = {
3669                           \int_set:Nn \l__enumext_level_int { #1 }
3670                           \tl_set:Nn \l__enumext_envir_name_tl { enumext }
3671                           \__enumext_standar_unknown_keys:n {##1}
3672                         },
3673       }
3674   }
3675 \clist_map_inline:nn {1, 2, 3, 4} { \__enumext_tmp:n {#1} }
```

Internal functions for handling unknown key.

```
3676 \cs_new_protected:Npn \__enumext_standar_unknown_keys:n #1
3677   {
3678     \exp_args:NV \__enumext_standar_unknown_keys:nn \l_keys_key_str {#1}
3679   }
3680 \cs_new_protected:Npn \__enumext_standar_unknown_keys:nn #1#2
3681   {
3682     \tl_if_blank:nTF {#2}
3683       {
3684         \msg_error:nne { enumext } { standar-unknown-key } {#1}
3685       }
3686       {
3687         \msg_error:nnee { enumext } { standar-unknown-key-value } {#1} {#2}
3688       }
3689   }
```

(*End of definition for* unknown *,* __enumext_standar_unknown_keys:n *, and* __enumext_standar_unknown_keys:nn*.*)

13.40 Redefining \item and \makelabel in keyans

The \item and \item[⟨*custom*⟩] commands work in the usual way in keyans, but the \item* and \item*[⟨*content*⟩] commands *store* the current ⟨*label*⟩ next to the ⟨*content*⟩ if it is present in the *sequence* and *prop list* defined by save-ans key.

__enumext_keyans_default_item:n

The function __enumext_keyans_default_item:n executes the original behavior of the \item along with the keys wrap-label, wrap-label* and itemindent.

```
3690 \cs_new_protected:Npn \__enumext_keyans_default_item:n #1
3691   {
3692     \tl_if_novalue:nTF { #1 }
3693       {
3694         \bool_set_true:N \l__enumext_wrap_label_v_bool
3695         \__enumext_item_std:w \tl_use:N \l__enumext_fake_item_indent_v_tl
3696       }
3697       {
3698         \bool_set_eq:NN \l__enumext_wrap_label_v_bool \l__enumext_wrap_label_opt_v_bool
3699         \__enumext_item_std:w [#1] \tl_use:N \l__enumext_fake_item_indent_v_tl
3700       }
3701   }
```

(*End of definition for* __enumext_keyans_default_item:n*.*)

__enumext_keyans_starred_item:n

The function __enumext_keyans_starred_item:n will take as argument #1 the *optional argument* [⟨*content*⟩] passed to \item* and save it via the __enumext_keyans_save_item_opt:n function, then activate the wrap-label key, execute \item using __enumext_item_std:w, the itemindent key and print the *optional argument* using the __enumext_keyans_show_item_opt: function handled by the wrap-opt key.

```
3702 \cs_new_protected:Npn \__enumext_keyans_starred_item:n #1
3703   {
3704     \__enumext_keyans_save_item_opt:n { #1 }
3705     \bool_set_true:N \l__enumext_wrap_label_v_bool
3706     \__enumext_item_std:w \tl_use:N \l__enumext_fake_item_indent_v_tl
3707     \__enumext_keyans_show_item_opt:
```

Now *store* the current ⟨*label*⟩ first in the *prop list* (including the *optional argument*), run the internal "*label and ref*" system if the save-ref key is active, then *store* in the *sequence* and finally increments \g__enumext_-check_starred_cmd_int for internal check system.

```
3708     \__enumext_keyans_addto_prop:n { #1 }
```

```
3709        \__enumext_keyans_store_ref:
3710        \__enumext_keyans_addto_seq:n { #1 }
3711        \int_gincr:N \g__enumext_check_starred_cmd_int
3712    }
```

(*End of definition for* __enumext_keyans_starred_item:n.)

\item*

__enumext_keyans_redefine_item:

The function __enumext_keyans_redefine_item: is responsible for adding the *starred argument* and *optional argument* by the __enumext_list_arg_two_v: function in the definition of the keyans environment. Here we will set to true the variable \l__enumext_item_wrap_key_bool used by the wrap-ans* key only when \item* is executed and additionally we need to use \peek_remove_spaces:n to avoid an unwanted space when using \item* together with the itemindent key. This function are passed to __enumext_list_arg_two_v: used in the definition of the keyans environment (§13.41).

```
3713  \cs_new_protected:Nn \__enumext_keyans_redefine_item:
3714    {
3715        \RenewDocumentCommand \item { s o }
3716          {
3717            \bool_if:nTF {##1}
3718              {
3719                \bool_set_true:N \l__enumext_item_wrap_key_bool % wrap-ans*
3720                \peek_remove_spaces:n
3721                  {
3722                    \__enumext_keyans_starred_item:n {##2}
3723                  }
3724              }
3725              {
3726                \bool_set_false:N \l__enumext_item_wrap_key_bool
3727                \__enumext_keyans_default_item:n {##2}
3728              }
3729          }
3730    }
```

(*End of definition for* \item* *and* __enumext_keyans_redefine_item:. *This function is documented on page* 17.)

__enumext_keyans_make_label:

__enumext_keyans_wrapper_label:n

__enumext_keyans_make_label_std:

__enumext_keyans_make_label_box:

The function __enumext_keyans_make_label: redefine \makelabel for the keys mode-box, align, font, wrap-label, wrap-label*, wrap-ans* and \item* for keyans environment. This function are passed to __enumext_list_arg_two_v: used in the definition of the keyans environment (§13.41).

```
3731  \cs_new_protected:Nn \__enumext_keyans_make_label:
3732    {
3733        \IfDocumentMetadataTF
3734          {

```

(*End of definition for* `\__enumext_keyans_make_label:` *and others.*)

13.41   Second argument of the lists

At this point in the code we have already programmed most of the tools needed to create a *custom* `list` environment, remember that the `\__enumext_start_list:nn` function takes two arguments, we have the "first" one ready, the "second" one we will define for all levels of the `enumext` environment, the `keyans` environment and the `enumext*` and `keyans*` environments.

Here we will implement the `\__enumext_list_arg_two_X:` function, which will be responsible for setting all the list parameters, the counter, the redefinition of `\item`, `\makelabel` along with the keys `ref`, `itemindent` and `show-length`.

13.41.1   Calculation of `\leftmargin` and `\itemindent`

Consider the figure 9 where the default margins (on the left) of a list are represented.
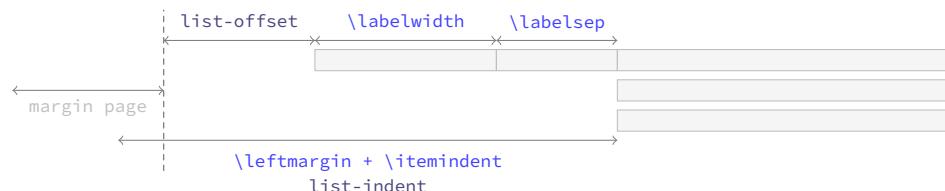

Figure 9: Representation of standard horizontal lengths in `list` environment.

The idea is to have control over these margins so that our list does not overlap the left margin of the page. The *key* relationship is that the *"right edge"* of the `\labelsep` equals the *"right edge"* of the `\itemindent`, so that the left edge of the *"label box"* is at `\leftmargin`+`\itemindent` minus `\labelwidth`+`\labelsep`. Thus, the handling of the margins by the package will be as shown in the figure 10.
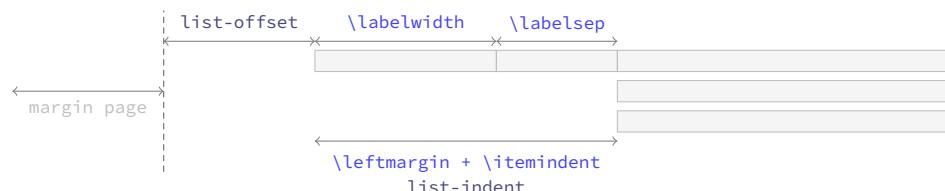

Figure 10: Representation of horizontal lengths concept in list in enumext.

Where the default values will look like in the figure 11.
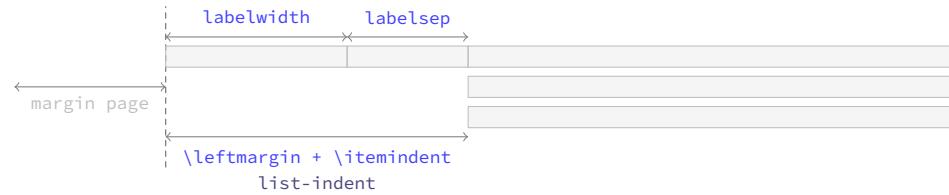

Figure 11: Default horizontal lengths in enumext.

`\__enumext_calc_hspace:NNNNNNN`
`\__enumext_calc_hspace:ccccccc`

The function `\__enumext_calc_hspace:NNNNNNN` takes seven arguments to be able to determine horizontal spaces for all list environment:

#1: `\l__enumext_labelwidth_X_dim`	#2: `\l__enumext_labelsep_X_dim`
#3: `\l__enumext_listoffset_X_dim`	#4: `\l__enumext_leftmargin_tmp_X_dim`
#5: `\l__enumext_leftmargin_X_dim`	#6: `\l__enumext_itemindent_X_dim`
#7: `\l__enumext_leftmargin_tmp_X_bool`	

And returns the *"adjusted"* values of `\leftmargin` and `\itemindent`.

```
3793 \cs_new_protected:Npn \__enumext_calc_hspace:NNNNNNN #1 #2 #3 #4 #5 #6 #7
3794   {
3795     \dim_compare:nNnT { #1 } < { \c_zero_dim }
3796       {
3797         \msg_warning:nnnV { enumext } { width-non-positive }{ labelwidth } #1
3798         \dim_set:Nn #1 { \dim_abs:n { #1 } }
3799       }
3800     \dim_compare:nNnT { #2 } < { \c_zero_dim }
3801       {
3802         \msg_warning:nnnV { enumext } { width-negative }{ labelsep }  #2
3803         \dim_set:Nn #2 { \dim_abs:n { #2 } }
3804       }
```

If no value has been passed to the `labelwidth` and `labelsep` keys we set the default values for `\l__enumext_leftmargin_tmp_X_dim`.

```
3805         \bool_if:NF #7 { \dim_set:Nn #4 { #1 + #2} }
```

We now analyze the cases and set the values for `\leftmargin` and `\itemindent`.

```
3806         \dim_compare:nNnTF { #4 } < { \c_zero_dim }
3807           {
3808             \dim_set:Nn #6 { #1 + #2 - #4}
3809             \dim_set:Nn #5 { #1 + #2 + #3 - #6 }
3810           }
3811           {
3812             \dim_compare:nNnT { #4 } = { #1 + #2 }
3813               { \dim_set:Nn #6 { \c_zero_dim } }
3814             \dim_compare:nNnT { #4 } < { #1 + #2 }
3815               { \dim_set:Nn #6 { #1 + #2 - #4} }
3816             \dim_compare:nNnT { #4 } > { #1 + #2 }
3817               {
3818                 \dim_set:Nn #6 { -#1 - #2 + #4}
3819                 \dim_set:Nn #6 { #6*-1}
3820               }
3821             \dim_set:Nn #5 { #1 + #2 + #3 - #6 }
3822           }
3823   }
3824 \cs_generate_variant:Nn \__enumext_calc_hspace:NNNNNNN { ccccccc }
```

(*End of definition for* `\__enumext_calc_hspace:NNNNNNN`.)

13.41.2 Setting second argument of the lists

`\__enumext_list_arg_two_i:`
`\__enumext_list_arg_two_ii:`
`\__enumext_list_arg_two_iii:`
`\__enumext_list_arg_two_iv:`
`\__enumext_list_arg_two_v:`

We will "not set" `\leftmargini`, `\leftmarginii`, `\leftmarginiii` or `\leftmarginiv`, in this case, we will directly set the parameters for vertical and horizontal list spacing per level.

```
3825 \cs_set_protected:Npn \__enumext_tmp:n #1
3826   {
3827     \cs_new_protected:cpn { __enumext_list_arg_two_#1: }
3828       {
3829         \__enumext_calc_hspace:ccccccc

13.42   The environment enumext

__enumext_safe_exec: The __enumext_safe_exec: function first call the function __enumext_is_not_nested: which sets \g__enumext_standar_bool to "*true*" if we are NOT nested within enumext*, then call the function __enumext_internal_mini_page: to create the environment __enumext_mini_page, we will increment \l__enumext_level_int to restrict nesting of the environment, set \l__enumext_standar_bool to "*true*" and finally call the function __enumext_is_on_first_level: which sets \l__enumext_standar_- first_bool to "*true*" only if the environment is NOT nested and we are at the "*first level*".

```
3905  \cs_new_protected:Nn \__enumext_safe_exec:
3906    {
3907      \__enumext_is_not_nested:
3908      \__enumext_internal_mini_page:
3909      \int_incr:N \l__enumext_level_int
3910      \int_compare:nNnT { \l__enumext_level_int } > { 4 }
3911        { \msg_fatal:nn { enumext } { list-too-deep } }
3912      \bool_set_true:N \l__enumext_standar_bool
3913      \bool_set_false:N \l__enumext_starred_bool
3914      \__enumext_is_on_first_level:
3915    }
```

(*End of definition for* __enumext_safe_exec:.)

__enumext_parse_keys:n   The __enumext_parse_store_keys:n function first we will clear the variable \l__enumext_series_- name_str used by the key series and then we check if we are at the "*first level*", if so we process the ⟨*keys*⟩ and then execute the function __enumext_parse_series:n used by the key series and call the function __enumext_nested_base_line_fix: used by the key base-fix, otherwise we will pass the ⟨*keys*⟩ to the inner levels of the environment then we execute the function __enumext_store_active_keys:n and reprocess the ⟨*keys*⟩ to pass them to the *sequence* if the key save-key is not active.

```
3916  \cs_new_protected:Npn \__enumext_parse_keys:n #1
3917    {
3918      \tl_if_novalue:nF {#1}
3919        {
3920          \str_clear:N \l__enumext_series_name_str
3921          \int_compare:nNnTF { \l__enumext_level_int } = { 1 }
3922            {
3923              \keys_set:nn { enumext / level-1 } {#1}
3924              \bool_if:NF \l__enumext_print_keyans_cmd_bool
3925                {
3926                  \__enumext_parse_series:n {#1}
3927                }
3928              \__enumext_nested_base_line_fix:
3929            }
3930            {
3931              \exp_args:Ne \keys_set:nn
3932                { enumext / level-\int_use:N \l__enumext_level_int } {#1}
3933              \bool_if:NF \l__enumext_print_keyans_cmd_bool
3934                {
3935                  \__enumext_parse_series:n {#1}
3936                }
3937            }
3938          \__enumext_store_active_keys:n {#1}
3939        }
3940    }
```

(*End of definition for* __enumext_parse_keys:n.)

__enumext_start_store_level: The __enumext_start_store_level: function activate the "*storing structure*" mechanism in the *sequence* for the command \anskey and the environment anskey*.

```
3941  \cs_new_protected:Nn \__enumext_start_store_level:
3942    {
3943      \bool_lazy_all:nT
```

```
3944          {
3945            { \bool_if_p:N \l__enumext_store_active_bool }
3946            { \bool_not_p:n { \l__enumext_keyans_env_bool } }
3947            { \bool_if_p:N \g__enumext_standar_bool }
3948          }
3949          {
3950            \int_compare:nNnT { \l__enumext_level_int } > { 1 }
3951              {
3952                \bool_set_true:c { l__enumext_store_upper_level_ \__enumext_level: _bool }
3953                \__enumext_store_level_open:
3954              }
3955          }
```

If enumext are nested in enumext* add __enumext_store_level_open: to preserve the *"storing structure"*.

```
3956          \bool_lazy_all:nT
3957            {
3958              { \bool_if_p:N \l__enumext_store_active_bool }
3959              { \bool_not_p:n { \l__enumext_keyans_env_bool } }
3960              { \int_compare_p:nNn { \l__enumext_level_h_int } = { 1 } }
3961            }
3962            {
3963              \int_compare:nNnT { \l__enumext_level_int } > { 0 }
3964                {
3965                  \bool_set_true:c { l__enumext_store_upper_level_ \__enumext_level: _bool }
3966                  \__enumext_store_level_open:
3967                }
3968            }
3969          }
```

(*End of definition for* __enumext_start_store_level:.)

__enumext_stop_store_level: The __enumext_stop_store_level: function stop the *"storing structure"* mechanism in the *sequence* for the command \anskey and the environment anskey*.

```
3970        \cs_new_protected:Nn \__enumext_stop_store_level:
3971          {
3972            \bool_if:cT { l__enumext_store_upper_level_ \__enumext_level: _bool }
3973              {
3974                \__enumext_store_level_close:
3975              }
3976          }
```

(*End of definition for* __enumext_stop_store_level:.)

__enumext_multicols_start: The function __enumext_multicols_start: will start the multicols environment according to the value passed by the columns key, then set the default value for \columnsep when columns-sep=0pt and set the value of \multicolsep equal to zero and leave \columnseprule equal to zero for inner levels.

```
3977        \cs_new_protected:Nn \__enumext_multicols_start:
3978          {
3979            \int_compare:nNnT
3980              { \int_use:c { l__enumext_columns_ \__enumext_level: _int } } > { 1 }
3981              {
3982                \dim_compare:nNnT
3983                  { \dim_use:c { l__enumext_columns_sep_ \__enumext_level: _dim } } = { \c_zero_dim }
3984                  {
3985                    \dim_set:cn { l__enumext_columns_sep_ \__enumext_level: _dim }
3986                      {
3987                        ( \dim_use:c { l__enumext_labelwidth_ \__enumext_level: _dim }
3988                          + \dim_use:c { l__enumext_labelsep_ \__enumext_level: _dim }
3989                        ) / \int_use:c { l__enumext_columns_ \__enumext_level: _int }
3990                        - \dim_use:c { l__enumext_listoffset_ \__enumext_level: _dim }
3991                      }
3992                  }
3993                \dim_set_eq:Nc \columnsep { l__enumext_columns_sep_ \__enumext_level: _dim }
3994                \int_compare:nNnT { \l__enumext_level_int } > { 1 }
3995                  {
3996                    \dim_zero:N \columnseprule
3997                  }
```

We will calculate the *vertical spacing* settings for the multicols environment using the function __enumext_-multi_addvspace:, apply our *"vertical adjust spacing"*, then start the multicols environment.

```
3998                \bool_if:cF { l__enumext_minipage_active_ \__enumext_level: _bool }
3999                  {
```

```
4000                    \skip_zero:N \multicolsep
4001                    \__enumext_multi_addvspace:
4002                  }
4003              \raggedcolumns
4004              \begin{multicols}{ \int_use:c { l__enumext_columns_ \__enumext_level: _int } }
4005            }
4006        }
```

(End of definition for __enumext_multicols_start:.)

__enumext_multicols_stop: The function __enumext_multicols_stop: will stop the multicols environment and apply our *"vertical adjust"* spacing. For compatibility with *tagged* PDF, the closing of the list environment is executed here along with __enumext_stop_store_level:.

```
4007  \cs_new_protected:Nn \__enumext_multicols_stop:
4008    {
4009      \int_compare:nNnTF
4010        { \int_use:c { l__enumext_columns_ \__enumext_level: _int } } > { 1 }
4011        {
4012          \__enumext_stop_list:
4013          \__enumext_stop_store_level:
4014          \end{multicols}
4015          \__enumext_unskip_unkern:
4016          \__enumext_unskip_unkern:
4017          \par\addvspace{ \skip_use:c { l__enumext_multicols_below_ \__enumext_level: _skip } }
4018        }
4019        {
4020          \__enumext_stop_list:
4021          \__enumext_stop_store_level:
4022        }
4023    }
```

(End of definition for __enumext_multicols_stop:.)

__enumext_before_list: The function __enumext_before_list: first calls the function __enumext_vspace_above: used by the keys above and above*, then calls the function __enumext_before_args_exec: used by the key before* and finally execute the function __enumext_check_ans_active: for the check answer mechanism.

```
4024  \cs_new_protected:Nn \__enumext_before_list:
4025    {
4026      \__enumext_vspace_above:
4027      \__enumext_before_args_exec:
4028      \__enumext_check_ans_active:
```

When the mini-env key is active it will set the value of the \l__enumext_minipage_right_X_dim to be the *width* of the __enumext_mini_page environment on the *"right side"*, using this value together with the value of the \l__enumext_minipage_hsep_X_dim set by the mini-sep key, the value of \l__enumext_minipage_left_X_dim will be set, which will be the *width* of __enumext_mini_page environment on the *"left side"*, always having a current \linewidth as *maximum width* between them.

```
4029        \dim_compare:nNnT
4030          { \dim_use:c { l__enumext_minipage_right_ \__enumext_level: _dim } } > { \c_zero_dim }
4031          {
4032            \dim_set:cn { l__enumext_minipage_left_ \__enumext_level: _dim }
4033              {
4034                \linewidth
4035                - \dim_use:c { l__enumext_minipage_right_ \__enumext_level: _dim }
4036                - \dim_use:c { l__enumext_minipage_hsep_ \__enumext_level: _dim }
4037              }
```

The boolean variable \l__enumext_minipage_active_X_bool will be activated and the integer variable \g__enumext_minipage_stat_int used by the \miniright command will be incremented, then the function __enumext_minipage_add_space: is called and the __enumext_mini_page environment on the *"left side"* will be initialized followed by the *"vertical spacing"* applied to preserve the *"baseline"* between the *left* and *right* side environments. After these actions, the function __enumext_multicols_start: is called to handle the multicols environment.

```
4038            \bool_set_true:c { l__enumext_minipage_active_ \__enumext_level: _bool }
4039            \int_gincr:N \g__enumext_minipage_stat_int
4040            \__enumext_minipage_add_space:
4041            \noindent
4042            \__enumext_mini_page{ \dim_use:c { l__enumext_minipage_left_ \__enumext_level: _dim } }
4043          }
4044      \__enumext_multicols_start:
4045    }
```

(*End of definition for* __enumext_before_list:.)

__enumext_second_part:

The function __enumext_second_part: first check the state of the boolean variable \l__enumext_-minipage_active_X_bool, if it is "true" a small test will be executed to check if we have omitted the use of \miniright (the __enumext_mini_page environment has not been closed), then close __enumext_mini_-page and add the *adjusted vertical space* \l__enumext_minipage_after_skip, otherwise we will close the multicols environment.

```
4046 \cs_new_protected:Nn \__enumext_second_part:
4047   {
4048     \bool_if:cTF { l__enumext_minipage_active_ \__enumext_level: _bool }
4049       {
4050         \int_compare:nNnT { \g__enumext_minipage_stat_int } = { 1 }
4051           {
4052             \msg_warning:nn { enumext } { missing-miniright }
4053             \miniright
4054           }
4055         \int_gzero:N \g__enumext_minipage_stat_int
4056         \__enumext_unskip_unkern: % remove topsep + [partopsep]
4057         \end__enumext_mini_page
4058       }
4059       {
4060         \__enumext_multicols_stop:
4061       }
```

Now we will execute the functions __enumext_after_stop_list: used by the key after, __enumext_-check_ans_key_hook: used by the key check-ans, __enumext_vspace_below: used by the keys below and below*. Finally set \l__enumext_standar_bool to false and call the function __enumext_resume_-save_counter: used by the series, resume and resume* keys.

```
4062     \__enumext_after_stop_list:
4063     \__enumext_check_ans_key_hook:
4064     \__enumext_vspace_below:
4065     \bool_set_false:N \l__enumext_standar_bool
4066     \bool_if:NF \l__enumext_print_keyans_cmd_bool
4067       {
4068         \__enumext_standar_save_counter:
4069       }
4070   }
```

(*End of definition for* __enumext_second_part:.)

__enumext_set_item_width:

The function __enumext_set_item_width: will set the value of \itemwidth taking into account the value established by the list-offset key for each level of the environment.

```
4071 \cs_new_protected:Nn \__enumext_set_item_width:
4072   {
4073     \dim_set:Nn \itemwidth { \linewidth }
4074     \dim_compare:nT
4075       {
4076         \dim_use:c { l__enumext_listoffset_ \__enumext_level: _dim } != \c_zero_dim
4077       }
4078       {
4079         \dim_sub:Nn \itemwidth
4080           {
4081             \dim_use:c { l__enumext_listoffset_ \__enumext_level: _dim }
4082           }
4083       }
4084   }
```

(*End of definition for* __enumext_set_item_width:.)

enumext

Now create the enumext environment based on list environment by levels.

```
4085 \NewDocumentEnvironment{enumext}{ O{} }
4086   {
4087     \__enumext_safe_exec:
4088     \__enumext_parse_keys:n {#1}
4089     \__enumext_before_list:
4090     \__enumext_start_store_level:
4091     \__enumext_start_list:nn
4092       { \tl_use:c { l__enumext_label_ \__enumext_level: _tl } }
4093       {
4094         \use:c { __enumext_list_arg_two_ \__enumext_level: : }
4095         \__enumext_before_keys_exec:
```

```
4096          }
4097        \__enumext_set_item_width:
4098        \__enumext_after_args_exec:
4099      }
4100      {
4101        \__enumext_second_part:
4102      }
```

(*End of definition for* enumext. *This function is documented on page 5.*)

As we don't want our check to be executed check-ans by levels but on the complete list, we will take it out of the enumext environment using the *"hook"* function __enumext_after_env:nn.

```
4103  \__enumext_after_env:nn {enumext}
4104    {
4105      \__enumext_execute_after_env:
4106    }
```

13.43 The environment keyans

The environment keyans also based on lists. The main differences with the enumext environment are the *nesting* and the way the *answers* (choice) will be stored and checked, this environment is intended exclusively for *"multiple choice questions"*.

__enumext_keyans_safe_exec:

The keyans environment will only be available if the save-ans key is active and can only be used at the *"first level"* within the enumext environment. We do not want the environment to be nested, so we will set a maximum at this point. If the conditions are not met, an error message will be returned.

```
4107  \cs_new_protected:Nn \__enumext_keyans_safe_exec:
4108    {
4109      \bool_if:NF \l__enumext_store_active_bool
4110        {
4111          \msg_error:nnnn { enumext } { wrong-place }{ keyans }{ save-ans }
4112        }
4113      \int_incr:N \l__enumext_keyans_level_int
4114      \bool_set_true:N \l__enumext_keyans_env_bool
4115      \__enumext_keyans_name_and_start:
4116      % Set false for interfering with enumext nested in keyans (yes, its possible and crayze)
4117      \bool_set_false:N \l__enumext_store_active_bool
4118      \int_compare:nNnT { \l__enumext_keyans_level_int } > { 1 }
4119        {
4120          \msg_error:nn { enumext } { keyans-nested }
4121        }
4122      \int_compare:nNnT { \l__enumext_level_int } > { 1 }
4123        {
4124          \msg_error:nn { enumext } { keyans-wrong-level }
4125        }
4126    }
```

(*End of definition for* __enumext_keyans_safe_exec:.)

__enumext_keyans_parse_keys:n

Parse [⟨*key = val*⟩] for keyans environment.

```
4127  \cs_new_protected:Npn \__enumext_keyans_parse_keys:n #1
4128    {
4129      \keys_set:nn { enumext / keyans } {#1}
4130    }
```

(*End of definition for* __enumext_keyans_parse_keys:n.)

4236    }
```

(*End of definition for* `keyans`. *This function is documented on page* *16*.)

13.44   Tagging PDF support for non-standart list environments

The LaTeX release 2022-06-01 brings automatic support for *tagged* PDF in several aspects, including the standard *list environments* and the `list` environment. Unfortunately non-standard *list environments* like `keyanspic` or the horizontal list environments `enumext*` and `keyans*` are not structured in a nice way, i.e. the expected result in the PDF file is the expected one, but the underlying structure is not correct. In simple terms, for *tagged* PDF a `list` environment is a `list` environment, no matter what it looks like in the PDF file.

To maintain a correct `list` structure when `\DocumentMetadata` is active, it is necessary to do some things manually using `tagpdf`[18] and `ltsockets`[20]. This implementation is an adaptation of my answer thanks to Ulrike Fischer's comments in How can I modify my `\item` redefinition to be compatible with `tagging-pdf`.

13.44.1   Socket for tagging support in `enumext*` and `keyans*`

start-list-tags   We will first define the necessary `sockets` and their behavior for `enumext*` and `keyans*`.
stop-start-tags
stop-list-tags
__enumext_start_list_tag:n
__enumext_stop_start_list_tag:
__enumext_stop_list_tag:n

```
4237  \socket_new:nn {tagsupport/__enumext/starred}{ 1 }
4238  \socket_new_plug:nnn {tagsupport/__enumext/starred} {start-list-tags}
4239    {
4240      \tag_resume:n {#1}
4241        \tag_struct_begin:n {tag=LI}
4242          \tag_struct_begin:n {tag=Lbl}
4243            \tag_mc_begin:n {tag=Lbl}
4244    }
4245  \socket_new_plug:nnn {tagsupport/__enumext/starred} {stop-start-tags}
4246    {
4247            \tag_mc_end:
4248          \tag_struct_end:n {tag=Lbl}
4249          \tag_struct_begin:n {tag=LBody}
4250            \tag_struct_begin:n {tag=text-unit}
4251              \tag_struct_begin:n {tag=text}
4252    }
4253  \socket_new_plug:nnn {tagsupport/__enumext/starred} {stop-list-tags}
4254    {
4255            \tag_struct_end:n {tag=text}
4256            \tag_struct_end:n {tag=text-unit}
4257          \tag_struct_end:n {tag=LBody}
4258        \tag_struct_end:n {tag=LI}
4259      \tag_suspend:n {#1}
4260    }
```

And now we'll wrap them so that they're only active when `\DocumentMetadata` is present.

```
4261  \cs_new_protected_nopar:Npn \__enumext_start_list_tag:n #1
4262    {
4263      \IfDocumentMetadataT
4264        {
4265          \socket_assign_plug:nn {tagsupport/__enumext/starred} {start-list-tags}
4266          \socket_use:nn {tagsupport/__enumext/starred} {#1}
4267        }
4268    }
4269  \cs_new_protected_nopar:Nn \__enumext_stop_start_list_tag:
4270    {
4271      \IfDocumentMetadataT
4272        {
4273          \socket_assign_plug:nn {tagsupport/__enumext/starred} {stop-start-tags}
4274          \socket_use:nn {tagsupport/__enumext/starred} { }
4275        }
4276    }
4277  \cs_new_protected_nopar:Npn \__enumext_stop_list_tag:n #1
4278    {
4279      \IfDocumentMetadataT
4280        {
4281          \socket_assign_plug:nn {tagsupport/__enumext/starred} {stop-list-tags}
4282          \socket_use:nn {tagsupport/__enumext/starred} {#1}
4283        }
4284    }
```

(*End of definition for* `start-list-tags` *and others.*)

13.44.2   Socket for tagging support in `keyanspic`

start-list-tags
stop-start-tags
stop-list-tags
__enumext_anspic_start_list_tag:
__enumext_anspic_stop_start_list_tag:
__enumext_anspic_stop_list_tag:

We will first define the necessary sockets and their behavior for `keyanspic` environment.

```
4285  \socket_new:nn {tagsupport/__enumext/keyanspic}{ 0 }
4286  \socket_new_plug:nnn {tagsupport/__enumext/keyanspic} {start-list-tags}
4287    {
4288      \tag_resume:n {keyanspic}
4289        \tag_struct_begin:n {tag=LI}
4290          \tag_struct_begin:n {tag=Lbl}
4291            \tag_mc_begin:n {tag=Lbl}
4292    }

13.45   The environment keyanspic and \anspic

The keyanspic environment is a list based environment that uses the same configuration for *"spacing"* and
⟨*label*⟩ as the keyans environment, but it does not use \item. The ⟨*contents*⟩ are passed to the environment
by means of the \anspic command as replacement for \item command and placed inside minipage envi-
ronments, with the ⟨*label*⟩ centered *"above"* or *"below"*, adjusting *widths* and *position* according to the options
passed to the environment.
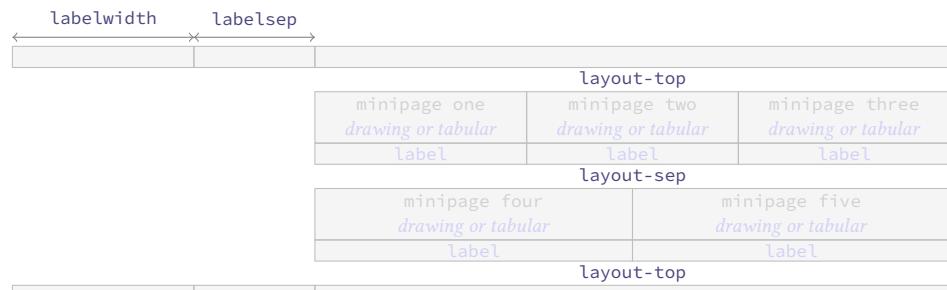

Figure 12: Representation of the keyanspic spacing in enumext.

In order for the keyanspic environment and the \anspic command to work correctly, we need to set and
export some variables in the first part of the environment definition and pass them to \anspic which is
executed in the second part of the environment. This implementation is adapted from the answer given by
Enrico Gregorio (@egreg) in How to process the body of an environment and divide it by a \macro?.

13.45.1   The environment keyanspic

label-pos   First we define the keys that allows us to process the position of the ⟨*label*⟩ centered "above" or "below" which
label-sep   will be label-pos, the vertical separation of these from *drawing or tabular* will be handled with the key
layout-sty label-sep. The *"layout style"* will be handled with the key layout-sty will take two values separated
layout-sep by comma {⟨*n° upper, n° lower*⟩} and will determine the number of minipage environments in which all
layout-top arguments of \anspic will be printed at the "upper" and "lower" within the environments separated by the
mark-ans   value of the key layout-sep. The vertical space "top" and "bottom" of the environment will be handled with
mark-pos   the key layout-top.

4364    save-sep    .value_required:n = true,
4365    wrap-opt    .code:n          = \keys_set:nn { enumext / keyans } { wrap-opt = #1 },
4366    wrap-opt    .value_required:n = true,
4367    wrap-ans*   .code:n          = \keys_set:nn { enumext / keyans } { wrap-ans* = #1 },
4368    wrap-ans*   .value_required:n = true,
4369    show-ans    .code:n          = \keys_set:nn { enumext / keyans } { show-ans = #1 },
4370    show-ans    .value_required:n = true,
4371    show-pos    .code:n          = \keys_set:nn { enumext / keyans } { show-pos = #1 },
4372    show-pos    .value_required:n = true,
4373    unknown     .code:n          = {
4374                                      \tl_set:Nn \l__enumext_envir_name_tl { keyanspic }
4375                                      \__enumext_keyans_unknown_keys:n {#1}
4376                                  },
4377    }
```

(*End of definition for* label-pos *and others.*)

__enumext_keyans_pic_safe_exec: The function __enumext_keyans_pic_safe_exec: check the nested level position inside the enumext
__enumext_keyans_pic_parse_keys:n   environment.
__enumext_keyans_pic_skip_abs:N
__enumext_keyans_pic_arg_two:

```
4378 \cs_new_protected:Nn \__enumext_keyans_pic_safe_exec:
4379    {
4380      \int_incr:N \l__enumext_keyans_pic_level_int
4381      \int_compare:nNnT { \l__enumext_keyans_pic_level_int } > { 1 }
4382        {
4383          \msg_error:nn { enumext } { keyanspic-nested }
4384        }
4385      \__enumext_keyans_name_and_start:
4386    }
```

Parse $[\langle key = val \rangle]$ for keyanspic environment.

```
4387 \cs_new_protected:Npn \__enumext_keyans_pic_parse_keys:n #1
4388    {
4389      \tl_if_novalue:nF {#1}
4390        {
4391          \keys_set:nn { enumext / keyanspic } {#1}
4392        }
4393    }
```

The function __enumext_keyans_pic_skip_abs:N will return a positive value \parsep from keyans
environment.

```
4394 \cs_new_protected:Npn \__enumext_keyans_pic_skip_abs:N #1
4395    {
4396      \dim_compare:nNnT { #1 } < { \c_zero_dim }
4397        {
4398          \skip_set:Nn #1 { -#1 }
4399        }
4400    }
```

The __enumext_keyans_pic_arg_two: function will be used in the *second argument* of the list environ-
ment that defines the keyanspic environment, with this we will take the configuration of the *"spaces"* and
the keys label, wrap-label, parsep and topsep from the keyans environment. The first thing we need to
do is set the boolean variable \l__enumext_leftmargin_tmp_v_bool handled by the list-indent key
to "false", then copy the definition of the second list argument from the keyans environment definition and
make sure that \parsep does not have a negative value.

```
4401 \cs_new_protected:Npn \__enumext_keyans_pic_arg_two:
4402    {
4403      \bool_set_false:N \l__enumext_leftmargin_tmp_v_bool
4404      \__enumext_list_arg_two_v:
4405      \__enumext_keyans_pic_skip_abs:N \parsep
```

Now we increment the counter enumXv of the keyans environment and save the *total height* of the $\langle label \rangle$ in
\l__enumext_anspic_label_htdp_dim used by \anspic and we will adjust the values of \parsep only
if the key label-pos is set to *below*.

```
4406      \bool_if:NF \l__enumext_anspic_label_above_bool
4407        {
4408          \stepcounter { enumXv }
4409          \hbox_set:Nn \l__enumext_anspic_label_box { \l__enumext_label_v_tl }
```

```
4410        \dim_set:Nn \l__enumext_anspic_label_htdp_dim
4411          {
4412            \box_ht_plus_dp:N \l__enumext_anspic_label_box
4413          }
4414        \skip_add:Nn \parsep
4415          {
4416            \l__enumext_anspic_label_htdp_dim
4417            + \box_dp:N \strutbox
4418            + \l__enumext_anspic_label_sep_skip
4419          }
4420        }
```

Finally we *adjust* the value of \leftmargin and \topsep then set \listparindent, \partopsep and \itemsep to zero so that the *horizontal* and *vertical* space is not affected.

```
4421        \dim_add:Nn \leftmargin { -\l__enumext_labelwidth_v_dim - \l__enumext_labelsep_v_dim }
4422        \ignorespaces
4423        \skip_add:Nn \topsep { 0.5\box_dp:N \strutbox }
4424        \dim_zero:N  \listparindent
4425        \skip_zero:N \partopsep
4426        \skip_zero:N \itemsep
4427      }
```

(*End of definition for* __enumext_keyans_pic_safe_exec: *and others.*)

keyanspic   Now we define the environment keyanspic. For compatibility with *tagged* PDF we must use the \begin{list} form and a lot of conditional code using \IfDocumentMetadataTF. We will first stop the code for automatic *tagged* PDF for list environments, redefine \item so that it cannot be used, and stop the code for automatic *tagged* PDF for the keyanspic environment.

```
4428    \NewDocumentEnvironment{keyanspic}{ o }
4429      {
4430        \__enumext_keyans_pic_safe_exec:
4431        \__enumext_keyans_pic_parse_keys:n {#1}
4432        \begin{list} { } { \__enumext_keyans_pic_arg_two: }
4433        \IfDocumentMetadataT
4434          {
4435            \tag_suspend:n {list}
4436          }
4437        \item[] \scan_stop:
4438        \RenewDocumentCommand \item {}
4439          {
4440            \msg_error:nn { enumext } { keyanspic-item-cmd }
4441          }
4442        \IfDocumentMetadataT
4443          {
4444            \tag_resume:n {keyanspic}
4445            \tag_tool:n {para/tagging=false} % no socket for this now
4446            \tag_suspend:n {keyanspic}
4447          }
4448      }
```

In the second part of the environment definition we will manually place our code for *tagged* PDF and execute the command \anspic using the __enumext_anspic_exec: function.

```
4449      {
4450        \IfDocumentMetadataT
4451          {
4452            \tag_resume:n {keyanspic}
4453          }
4454        \__enumext_anspic_exec:
4455        \IfDocumentMetadataT
4456          {
4457            \tag_suspend:n {keyanspic}
4458          }
4459        \end{list}
4460        \IfDocumentMetadataT
4461          {
4462            \tag_struct_end:n {tag=L}
4463          }
```

Finally we check if \anspic* has been used, set the counter enumXvi to zero and apply our "adjusted" vertical space bottom.

```
4464        \__enumext_check_starred_cmd:n { anspic }
4465        \setcounter { enumXvi } { 0 }
```

```
4466        \bool_if:NTF \l__enumext_anspic_label_above_bool
4467          {
4468            \par\addvspace{ 0.5\box_dp:N \strutbox }
4469          }
4470          {
4471            \par
4472            \addvspace
4473              {
4474                \dim_eval:n
4475                  {
4476                    \l__enumext_anspic_label_htdp_dim + \box_ht_plus_dp:N \strutbox
4477                    + \l__enumext_anspic_label_sep_skip + \l__enumext_topsep_v_skip
4478                  }
4479              }
4480          }
4481        }
```

(*End of definition for* keyanspic. *This function is documented on page 17.*)

13.45.2   The command \anspic

The \anspic command take three arguments, the *starred versions* \anspic*[⟨content⟩] *store* the current ⟨*label*⟩ next to the *optional argument* [⟨content⟩] in the *sequence* and *prop list* defined by save-ans key. The third *mandatory argument* {⟨*drawing or tabular*⟩} is NOT *stored* in the *sequence* or *prop list*.

🔷 One of the complications here to make the keyanspic environment compatible with *tagged* PDF is the position of ⟨*label*⟩, the \anspic command processes the arguments in order, where #1 and #2 correspond to ⟨*label*⟩ and #3 to the mandatory argument and puts all this inside a minipage environment. If #1 and #2, that is ⟨*label*⟩, is above #3 there are no problems with *tagged* PDF, but if #3 comes first the list created with *tagged* PDF will not be correct.

\anspic
__enumext_anspic_body_dim:n
__enumext_anspic_label:nn
__enumext_anspic_label_pos:nnn
__enumext_anspic_args:nnn
__enumext_anspic_print:n
__enumext_anspic_print:e
__enumext_anspic_print:V
__enumext_anspic_row:n
__enumext_anspic_exec:

We check that the command is active in the keyanspic environment only if the save-ans key is present, otherwise we return an error. The three arguments are handled by the function __enumext_anspic_args:nnn and stored in the sequence \l__enumext_anspic_args_seq which is processed by the keyanspic environment.

```
4482  \NewDocumentCommand \anspic { s o +m }
4483    {
4484      \bool_if:NF \l__enumext_store_active_bool
4485        {
4486          \msg_error:nnnn { enumext } { wrong-place }{ keyanspic }{ save-ans }
4487        }
4488      \int_compare:nNnT { \l__enumext_level_int } > { 1 }
4489        {
4490          \msg_error:nn { enumext } { keyanspic-wrong-level }
4491        }
4492      \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
4493        {
4494          \msg_error:nnnn { enumext } { command-wrong-place }{ anspic }{ keyans }
4495        }
4496      \seq_put_right:Nn \l__enumext_anspic_args_seq
4497        {
4498          \__enumext_anspic_args:nnn { #1 } { #2 } { #3 }
4499        }
4500    }
```

The __enumext_anspic_body_dim:n function will set the value of \l__enumext_anspic_body_htdp_dim equal to the "height plus depth" of the *mandatory argument* if the key label-pos is set "below".

```
4501  \cs_new_protected:Npn \__enumext_anspic_body_dim:n #1
4502    {
4503      \bool_if:NF \l__enumext_anspic_label_above_bool
4504        {
4505          \IfDocumentMetadataT
4506            {
4507              \tag_suspend:n {keyanspic}
4508            }
4509          \vbox_set:Nn \l__enumext_anspic_body_box { #1 }
4510          \dim_set:Nn \l__enumext_anspic_body_htdp_dim
4511            {
4512              \box_ht_plus_dp:N \l__enumext_anspic_body_box
4513            }
4514          \IfDocumentMetadataT
4515            {
4516              \tag_resume:n {keyanspic}
4517            }
```

```
4518          }
4519      }
```

The __enumext_anspic_label:nn function will process inside \makebox the *starred argument* '*' and *optional argument* passed to the command. Here we will store the ⟨*label*⟩ and *optional argument* in *prop list* and *sequence* and execute the show-ans, show-pos, font, wrap-label, wrap-ans* and wrap-opt keys.

```
4520  \cs_new_protected:Npn \__enumext_anspic_label:nn #1 #2
4521    {
4522      \makebox[ \l__enumext_anspic_mini_width_dim ][ c ]
4523        {
4524          \bool_if:nTF { #1 }
4525            {
4526              \bool_set_true:N \l__enumext_item_wrap_key_bool
4527              \bool_set_true:N \l__enumext_wrap_label_v_bool
4528              \__enumext_keyans_save_item_opt:n { #2 }
4529              \__enumext_keyans_addto_prop:n { #2 }
4530              \__enumext_keyans_store_ref:
4531              \__enumext_keyans_addto_seq:n { #2 }
4532              \int_gincr:N \g__enumext_check_starred_cmd_int
4533              \__enumext_keyans_show_ans:
4534              \__enumext_keyans_show_pos:
4535              \makebox[ \l__enumext_labelwidth_v_dim ][c]
4536                {
4537                  \tl_use:N \l__enumext_label_font_style_v_tl
4538                  \__enumext_keyans_wrapper_label:n { \l__enumext_label_vi_tl }
4539                }
4540              \skip_horizontal:n { \l__enumext_labelsep_v_dim }
4541              \__enumext_keyans_show_item_opt:
4542            }
4543            {
4544              \bool_set_false:N \l__enumext_item_wrap_key_bool
4545              \tl_use:N \l__enumext_label_font_style_v_tl
4546              \__enumext_wrapper_label_v:n { \l__enumext_label_vi_tl }
4547            }
4548        }
4549    }
```

The function __enumext_anspic_label_pos:nnn will be in charge of handling the *"counter"* and the position of the ⟨*label*⟩, set by label-pos key which will have the same configuration as the keyans environment.

```
4550  \cs_new_protected:Npn \__enumext_anspic_label_pos:nnn #1 #2 #3
4551    {
4552      \stepcounter { enumXvi }
4553      \__enumext_anspic_body_dim:n { #3 }
4554      \bool_if:NTF \l__enumext_anspic_label_above_bool
4555        {
4556          \__enumext_anspic_label:nn { #1 } { #2 }
4557        }
4558        {
4559          \raisebox
4560            {
4561              -\dim_eval:n
4562                {
4563                  \l__enumext_anspic_label_htdp_dim
4564                  + \l__enumext_anspic_body_htdp_dim
4565                  + \box_dp:N \strutbox
4566                  + \l__enumext_anspic_label_sep_skip
4567                }
4568            }
4569            [ 0pt ] [ 0pt ]
4570            {
4571              \__enumext_anspic_label:nn { #1 } { #2 }
4572            }
4573        }
4574    }
4575  %
```

The __enumext_anspic_args:nnn function will be responsible for placing the code compatible with *tagged* PDF and the arguments within the \l__enumext_anspic_args_seq sequence which will be processed by the __enumext_anspic_print:n function in the second part of the definition of the keyanspic environment.

```
4576  \cs_new_protected:Nn \__enumext_anspic_args:nnn
4577    {
4578      \__enumext_anspic_start_list_tag:
```

```
4579        \__enumext_anspic_label_pos:nnn { #1 } { #2 } { #3 }
4580        \__enumext_anspic_stop_start_list_tag:
4581        \bool_if:NTF \l__enumext_anspic_label_above_bool
4582          {
4583            \\[\l__enumext_anspic_label_sep_skip] #3
4584          }
4585          {
4586            \\ #3
4587          }
4588        \__enumext_anspic_stop_list_tag:
4589      }
```

The value {⟨n° *upper, n° lower*⟩} passed to the `layout-sty` key is split by comma and is handled directly by the function `\__enumext_anspic_print:n` and passed to the function `\__enumext_anspic_row:n`.

```
4590  \cs_new_protected:Nn \__enumext_anspic_print:n
4591    {
4592      \clist_map_function:nN { #1 } \__enumext_anspic_row:n
4593    }
4594  \cs_generate_variant:Nn \__enumext_anspic_print:n { e, V }
```

The function `\__enumext_anspic_row:n` will set the *widths* for the `minipage` environments and place *all arguments* passed to `\anspic` *saved* in the `\l__enumext_anspic_args_seq` sequence inside them.

```
4595  \cs_new_protected:Nn \__enumext_anspic_row:n
4596    {
4597      \dim_set:Nn \l__enumext_anspic_mini_width_dim { \linewidth / #1 }
4598      \int_set:Nn \l__enumext_anspic_above_int { \l__enumext_anspic_below_int }
4599      \int_set:Nn \l__enumext_anspic_below_int { \l__enumext_anspic_above_int + #1 }
4600      \int_step_inline:nnn
4601        { \l__enumext_anspic_above_int + 1 }
4602        { \l__enumext_anspic_below_int }
4603        {
4604          \IfDocumentMetadataT
4605            {
4606              \tag_suspend:n {minipage}
4607            }
4608          \begin{minipage}[ \l__enumext_anspic_mini_pos_str ]{ \l__enumext_anspic_mini_width_dim }
4609            \centering
4610            \seq_item:Nn \l__enumext_anspic_args_seq { ##1 }
4611          \end{minipage}
4612          \IfDocumentMetadataT
4613            {
4614              \tag_resume:n {minipage}
4615            }
4616        }
4617      \par
4618    }
```

The `\__enumext_anspic_exec:` function will execute all the code in the `\anspic` command in the second argument of the `keyanspic` environment definition. If the key `layout-sty` is not set, everything will be printed on a *single line*.

```
4619  \cs_new_protected:Nn \__enumext_anspic_exec:
4620    {
4621      \tl_if_empty:NTF \l__enumext_anspic_layout_style_tl
4622        {
4623          \__enumext_anspic_print:e { \seq_count:N \l__enumext_anspic_args_seq }
4624        }
4625        {
4626          \__enumext_anspic_print:V \l__enumext_anspic_layout_style_tl
4627        }
4628    }
```

(*End of definition for* `\anspic` *and others. This function is documented on page 18.*)

13.46   The horizontal environments

Generating *horizontal list environments* is NOT as simple as standard LaTeX list environments. The fundamental part of the code is adapted from the `shortlst` package to a more modern version using `expl3`. It is not possible to redefine `\item` and `\makelabel` using `\RenewDocumentCommand` as in the vertical *non starred* versions.

To achieve the *horizontal list environments* we will capture the `\item` command and the ⟨*content*⟩ of this in *horizontal box* using `\makebox` for the `label` and a `minipage` environment for the ⟨*content*⟩ passed to `\item`, we will also add the *optional argument* (⟨*number*⟩) to `\item` to be able to *join columns* horizontally, in simple

terms, we want `\item` to behave in the same way as in the enumext environment but adding an *first optional argument* (⟨*number*⟩).

A side effect is the limitation of using `\item` in this way *without* using `\RenewDocumentCommand`, which loses the original definition and affects the *standard list environments* provided by LaTeX and any environment defined using base `list` environment, including: itemize, enumerate, description, quote, quotation, verse, center, flushleft, flushright, verbatim, tabbing, trivlist, list and all environments created with `\newtheorem`.

💣 One way to get around this is to use something like:

```
\AddToHook{env/enumerate/before}{recover original \item definition}
```

inside minipage, but in my partial tests this does not have the desired effect and the vertical and horizontal spacing is distorted. For now this will remain as a limitation and I will see if it is feasible to implement it in the future.

🏷 For compatibility with the *tagged* PDF we close the environments according to the presence or not of the mini-env key.

13.46.1 Functions for item box width

__enumext_starred_columns_set_vii:
__enumext_starred_columns_set_viii:

We set the default value for the *width of the box* containing the ⟨*content*⟩ of the items for enumext* environment.

```
4629 \cs_new_protected:Nn \__enumext_starred_columns_set_vii:
4630   {
4631     \dim_compare:nNnT { \l__enumext_columns_sep_vii_dim } = { \c_zero_dim }
4632       {
4633         \dim_set:Nn \l__enumext_columns_sep_vii_dim
4634           {
4635             ( \l__enumext_labelwidth_vii_dim + \l__enumext_labelsep_vii_dim )
4636             / \l__enumext_columns_vii_int
4637           }
4638       }
4639     \int_set:Nn \l__enumext_tmpa_vii_int { \l__enumext_columns_vii_int - 1 }
4640     \dim_set:Nn \l__enumext_item_width_vii_dim
4641       {
4642         ( \linewidth - \l__enumext_columns_sep_vii_dim * \l__enumext_tmpa_vii_int )
4643         / \l__enumext_columns_vii_int
4644         - \l__enumext_labelwidth_vii_dim
4645         - \l__enumext_labelsep_vii_dim
4646       }
```

When the key rightmargin is active we must adjust the values.

```
4647     \dim_compare:nNnT { \l__enumext_rightmargin_vii_dim } > { \c_zero_dim }
4648       {
4649         \dim_sub:Nn \l__enumext_item_width_vii_dim
4650           {
4651             ( \l__enumext_rightmargin_vii_dim * \l__enumext_tmpa_vii_int )
4652             / \l__enumext_columns_vii_int
4653           }
4654         \dim_add:Nn \l__enumext_columns_sep_vii_dim
4655           {
4656             \l__enumext_rightmargin_vii_dim
4657           }
4658       }
4659   }
```

Same implementation for the keyans* environment.

```
4660 \cs_new_protected:Nn \__enumext_starred_columns_set_viii:
4661   {
4662     \dim_compare:nNnT { \l__enumext_columns_sep_viii_dim } = { \c_zero_dim }

(*End of definition for* __enumext_starred_joined_item_vii:n *and* __enumext_starred_joined_item_viii:n.)

13.46.3   Functions for `mini-env`, `mini-right` and `mini-right*` keys

__enumext_start_mini_vii:
__enumext_stop_mini_vii:

The implementation of the `mini-env` key support is almost identical to the one used in the `enumext` and `keyans` environments, the difference is that the `__enumext_mini_page` environment on the *"right side"* is executed *"after"* closing the environment, so it is necessary to make a global copy of the variable \l__enumext_minipage_right_vii_dim in the variable \g__enumext_minipage_right_vii_dim.

```
4789  \cs_new_protected:Nn \__enumext_start_mini_vii:
4790    {
4791      \dim_compare:nNnT { \l__enumext_minipage_right_vii_dim } > { \c_zero_dim }
4792        {
4793          \dim_set:Nn \l__enumext_minipage_left_vii_dim
4794            {
4795              \linewidth
4796              - \l__enumext_minipage_right_vii_dim
4797              - \l__enumext_minipage_hsep_vii_dim
4798            }
4799          \bool_set_true:N \l__enumext_minipage_active_vii_bool
4800          \dim_gset_eq:NN
4801            \g__enumext_minipage_right_vii_dim
4802            \l__enumext_minipage_right_vii_dim
4803          \__enumext_mini_addvspace_vii:
```

```
4804            \nointerlineskip\noindent
4805            \__enumext_mini_page{ \l__enumext_minipage_left_vii_dim }
4806        }
4807    }
```

The function __enumext_stop_mini_vii: closes the __enumext_mini_page environment on the *"left side"*, applies \hfill and set the variable \g__enumext_minipage_active_vii_bool to *"true"* which will be used in the function __enumext_after_env:nn to execute the minipage on the *"right side"*. At this point we will execute the __enumext_stop_list: and __enumext_stop_store_level_vii: functions stopping the list environment and the level saving mechanism for storage in *sequence* of the \anskey command and anskey* environment. This function is passed to the __enumext_after_list_vii: function in the second part of the enumext* environment definition (§13.47).

```
4808  \cs_new_protected:Nn \__enumext_stop_mini_vii:
4809    {
4810      \bool_if:NTF \l__enumext_minipage_active_vii_bool
4811        {
4812          \__enumext_stop_list:
4813          \__enumext_stop_store_level_vii:
4814          \IfDocumentMetadataT { \tag_resume:n {enumext*} }
4815          \end__enumext_mini_page
4816          \hfill
4817          \bool_gset_true:N \g__enumext_minipage_active_vii_bool
4818        }
4819        {
4820          \__enumext_stop_list:
4821          \__enumext_stop_store_level_vii:
4822        }
4823    }
```

(*End of definition for* __enumext_start_mini_vii: *and* __enumext_stop_mini_vii:.)

Finally we execute the {⟨code⟩} passed to the mini-right or mini-right* keys stored in the variable \g__enumext_miniright_code_vii_tl in the minipage environment on the *"right side"*. For compatibility with the caption package and possibly other {⟨code⟩} passed to this key, we will pass it to a box and then print it.

```
4824  \__enumext_after_env:nn {enumext*}
4825    {
4826      \bool_if:NT \g__enumext_minipage_active_vii_bool

(*End of definition for* `\__enumext_start_mini_viii:` *and* `\__enumext_stop_mini_viii:`.)

13.47 The environment enumext*

enumext* First we will generate the environment and we will give a temporary definition to `\__enumext_stop_-item_tmp_vii:` equal to `\__enumext_first_item_tmp_vii:` and next to `\item` equal to `\__enumext_-start_item_tmp_vii:` which we will redefine later. Unlike the implementation used by the `shortlst` package, we will not set the values of `\rightskip` and `\@rightskip` equal to `\@flushglue` whose value is `0.0pt plus 1.0 fil`, in the tests I have performed this fails in some circumstances and different results are obtained when using pdfTEX and LuaTEX.

```
4913  \NewDocumentEnvironment{enumext*}{ o }
4914      {
4915        \__enumext_safe_exec_vii:
4916        \__enumext_parse_keys_vii:n {#1}
```

```

5008        }
5009    }
```

(*End of definition for* __enumext_start_store_level_vii: *and* __enumext_stop_store_level_vii:.)

13.47.1 The command \item in enumext*

__enumext_first_item_tmp_vii:

The __enumext_first_item_tmp_vii: function will remove horizontal space equal to \labelwidth plus \labelsep to the left of the *"first"* \item in the environment at the point of execution of this function, where it is equal to the __enumext_stop_item_tmp_vii: function inside the environment body definition.

```
5010 \cs_new_protected_nopar:Nn \__enumext_first_item_tmp_vii:
5011   {
5012     \skip_horizontal:n
5013       {
5014         -\l__enumext_labelwidth_vii_dim - \l__enumext_labelsep_vii_dim
5015       }
5016     \ignorespaces
5017   }
```

(*End of definition for* __enumext_first_item_tmp_vii:.)

__enumext_start_item_tmp_vii:
__enumext_item_peek_args_vii:
__enumext_joined_item_vii:w
__enumext_standar_item_vii:w
__enumext_starred_item_vii:w
__enumext_starred_item_vii_aux_i:w
__enumext_starred_item_vii_aux_ii:w
__enumext_starred_item_vii_aux_iii:w

First we will call the function __enumext_stop_item_tmp_vii: that we will redefine later, we will increment the value of \l__enumext_item_column_pos_vii_int that will count the item's by rows and the value of \g__enumext_item_count_all_vii_int that will count the total of item's in the environment. After that we will call the function __enumext_item_peek_args_vii: that will handle the arguments passed to \item.

```
5018 \cs_new_protected_nopar:Nn \__enumext_start_item_tmp_vii:
5019   {
5020     \__enumext_stop_item_tmp_vii:
5021     \int_incr:N \l__enumext_item_column_pos_vii_int
5022     \int_gincr:N \g__enumext_item_count_all_vii_int
5023     \__enumext_item_peek_args_vii:
5024   }
```

The function __enumext_item_peek_args_vii: will handle the \item(⟨*number*⟩). Look for the argument "(", if it is present we will call the function __enumext_joined_item_vii:w (⟨*number*⟩), which is in charge of joining the item's in the same row, in case they are not present we will set the default value (1).

```
5025 \cs_new_protected:Nn \__enumext_item_peek_args_vii:
5026   {
5027     \peek_meaning:NTF (
5028       { \__enumext_joined_item_vii:w }
5029       { \__enumext_joined_item_vii:w (1) }
5030   }
```

The function __enumext_joined_item_vii:w will first call the function __enumext_starred_-joined_item_vii:n in charge of setting the *width* of the box that will store the content passed to \item. Then we will look for the argument "*", if it is present we will call the function __enumext_starred_item_vii:w otherwise we will call the function __enumext_standar_item_vii:w.

```
5031 \cs_new_protected:Npn \__enumext_joined_item_vii:w (#1)
5032   {
5033     \__enumext_starred_joined_item_vii:n {#1}
5034     \peek_meaning_remove:NTF *
5035       { \__enumext_starred_item_vii:w  }
5036       { \__enumext_standar_item_vii:w }
5037   }
```

The function __enumext_standar_item_vii:w will first look for the argument "[", if present it will set the state of the variable \l__enumext_wrap_label_opt_vii_bool equal to the state of the variable \l__enumext_wrap_label_opt_vii_bool handled by the key wrap-label* and finally execute the *non-enumerated* version \item[⟨*custom*⟩] by means of the function __enumext_start_item_vii:w, otherwise we will set the value of the variable \l__enumext_wrap_label_vii_bool handled by the wrap-label key to true and set the switch \if@noitemarg to true to execute the enumerated version of \item by means of the function __enumext_start_item_vii:w [\l__enumext_label_vii_tl].

```
5038 \cs_new_protected:Npn \__enumext_standar_item_vii:w
5039   {
5040     \bool_set_false:N \l__enumext_item_starred_vii_bool

(*End of definition for* `\__enumext_start_item_tmp_vii:` *and others.*)

`\__enumext_fake_make_label_vii:n`

The `\__enumext_fake_make_label_vii:n` function will be in charge of handling our definition of `\item`. First we increment the counter `enumXvii` for the enumerated items and activate support for the *check answers* mechanism, followed by support for `\item*[⟨symbol⟩][⟨offset⟩]` if present, then the `wrap-label` and `wrap-label*` keys which we execute using `\makebox` whose width will be given by the `labelwidth` key and position by the `align` key, inside the argument of this we will execute the `font` key together with the function defined by the `wrap-label` or `wrap-label*` keys. Finally we execute the `labelsep` key applying a `\skip_horizontal:N` and `\ignorespaces`.

🛡 For compatibility with *tagged* PDF and `hyperref` when an environment `enumext` is nested in `enumext*` and the key `save-ans` is not active need setting the `\if@hyper@item` switch to *"true"*. The explanation for this is given by the master Heiko Oberdiek on `\refstepcounter{enumi}` twice (or more) creates destination with the same identifier. This patch is only needed if you are running `pdflatex` and not if you are running `lualatex`

(*End of definition for* __enumext_fake_make_label_vii:n.)

13.47.2 Real definition of \item in enumext*

The functions __enumext_start_item_vii:w and __enumext_stop_item_vii: executing the true definition of \item inside the enumext* environment, unlike the implementation in shortlst we will NOT use an extra group and the plain form of the lrbox environment.

__enumext_start_item_vii:w
__enumext_stop_item_vii:

The first thing we will do is set the value of __enumext_stop_item_tmp_vii: equal to __enumext_-stop_item_vii: which we will define later, after that we will start capturing \item and *"item content"* in a *horizontal box* where the width will be \itemwidth plus \labelwidth plus \labelsep.

```
5127 \cs_new_protected_nopar:Npn \__enumext_start_item_vii:w [#1]
5128   {
5129     \cs_set_eq:NN \__enumext_stop_item_tmp_vii: \__enumext_stop_item_vii:
5130     \hbox_set_to_wd:Nnw \l__enumext_item_text_vii_box
5131       {
5132         \l__enumext_joined_width_vii_dim
5133         + \l__enumext_labelwidth_vii_dim
5134         + \l__enumext_labelsep_vii_dim
5135       }
```

Redefine the \footnote command.

```
5136        \__enumext_renew_footnote_starred:
```

Now we insert our *sockets* for *tagging* PDF support and run \item.

```
5137        \__enumext_start_list_tag:n {enumext*}
5138        \__enumext_fake_make_label_vii:n {#1}
5139        \__enumext_stop_start_list_tag:
```

Finally we open the minipage environment, capture the *"item content"*, make \parindent take the value of the key listparindent and \parskip take the value of the key parsep, then execute the keys itemindent and first.

🎯 Here the use of \unskip and \skip_horizontal:n with the value of listparindent is necessary, otherwise an unwanted space is created when using \item[⟨*opt*⟩] and the value passed to the key itemindent is incremented.

```
5140        \__enumext_minipage:w [ t ]{ \l__enumext_joined_width_vii_dim }
5141          \dim_set_eq:NN \parindent \l__enumext_listparindent_vii_dim
5142          \skip_set_eq:NN \parskip \l__enumext_parsep_vii_skip
5143          \__enumext_unskip_unkern:
5144          \__enumext_unskip_unkern:
5145          \skip_horizontal:n { -\l__enumext_listparindent_vii_dim } \ignorespaces
5146          \tl_use:N \l__enumext_fake_item_indent_vii_tl
5147          \tl_use:N \l__enumext_after_list_args_vii_tl
5148    }
```

The __enumext_stop_item_vii: function will finish the fetching \item and *"item content"* by closing the minipage environment, the *sockets* for *tagging* PDF and the *horizontal box*.

```
5149 \cs_new_protected_nopar:Nn \__enumext_stop_item_vii:
5150   {
5151     \__enumext_endminipage:
5152   \__enumext_stop_list_tag:n {enumext*}
5153   \hbox_set_end:
```

Here we will reduce the *warnings* a bit by setting the value of `\hbadness` to `10000`, print `\item` and *"item content"* from the *horizontal box,*.

```
5154    \int_set:Nn \hbadness { 10000 }
5155    \box_use_drop:N \l__enumext_item_text_vii_box
```

Finally apply the *vertical space* between rows set by `itemsep` key passed to `\parsep` using `\par\noindent` and *horizontal space* between columns set by `columns-sep` key using `\skip_horizontal:N`.

```
5156    \int_compare:nNnTF
5157      { \l__enumext_item_column_pos_vii_int } = { \l__enumext_columns_vii_int }
5158      {
5159        \par\noindent
5160        \int_zero:N \l__enumext_item_column_pos_vii_int
5161      }
5162      {
5163        \skip_horizontal:N \l__enumext_columns_sep_vii_dim
5164      }
5165    }
```

(*End of definition for* `\__enumext_start_item_vii:w` *and* `\__enumext_stop_item_vii:.`)

`\__enumext_remove_extra_parsep_vii:` Remove the extra *vertical space* equal to `\parsep=\itemsep` when the total number of `\item` is divisible by the number of `\item` in the last row of the environment. Here the use of `\unskip` or `\removelastskip` fails and does not obtain the expected result, using `\vspace` is the option and in this case, we can use a simplified version since we are always in ⟨*vertical mode*⟩.

```
5166  \cs_new_protected:Nn \__enumext_remove_extra_parsep_vii:
5167    {
5168      \int_compare:nNnT
5169        {
5170          \int_mod:nn
5171            {  \g__enumext_item_count_all_vii_int } { \l__enumext_columns_vii_int }
5172        }
5173        =
5174        { 0 }
5175        {
5176          \para_end:
5177          \skip_vertical:n { -\l__enumext_itemsep_vii_skip }
5178          \skip_vertical:N \c_zero_skip
5179          \int_gzero:N \g__enumext_item_count_all_vii_int
5180        }
5181    }
```

(*End of definition for* `\__enumext_remove_extra_parsep_vii:.`)

As we don't want our check to be executed `check-ans` by levels but on the complete list, we will take it out of the `enumext*` environment using the *"hook"* function `\__enumext_after_env:nn`.

```
5182  \__enumext_after_env:nn {enumext*}
5183    {
5184      \__enumext_execute_after_env:
5185    }
```

13.48 The environment keyans*

keyans* The implementation of `keyans*` environment is the similar as that used by the `enumext*` environment except for the `\__enumext_check_starred_cmd:n` function added in the second part.

```
5186  \NewDocumentEnvironment{keyans*}{ o }
5187    {
5188      \__enumext_safe_exec_viii:
5189      \__enumext_parse_keys_viii:n {#1}
5190      \__enumext_before_list_viii:
5191      \__enumext_start_list:nn { }
5192        {
5193          \__enumext_list_arg_two_viii:
5194          \__enumext_before_keys_exec_viii:
5195        }
5196      \IfDocumentMetadataT { \tag_suspend:n {keyans*} }
5197      \__enumext_starred_columns_set_viii:
5198      \item[] \scan_stop:
5199      \cs_set_eq:NN \__enumext_stop_item_tmp_viii: \__enumext_first_item_tmp_viii:
5200      \cs_set_eq:NN \item \__enumext_start_item_tmp_viii:
5201      \ignorespaces
5202    }
```

```
5203  {
5204    \IfDocumentMetadataT { \tag_struct_end:n {tag=text-unit} }
5205    \__enumext_stop_item_tmp_viii:
5206    \__enumext_remove_extra_parsep_viii:
5207    \__enumext_check_starred_cmd:n { item }
5208    \__enumext_after_list_viii:
5209  }
```

(*End of definition for* keyans*. *This function is documented on page 16.*)

__enumext_safe_exec_viii: The __enumext_safe_exec_viii: function will first check if the save-ans key is active and only when this is true the environment will be available, it will increment the value of \l__enumext_keyans_level_h_int and return an error message when we are nesting the environment, then it will call the __enumext_-keyans_name_and_start: function in charge of saving the name of the environment and the line it is running on, then it will check if we are trying to nest keyans* in enumext* returning an error and we will set \l__enumext_starred_bool to true, finally we will check if we are within the appropriate level within the enumext environment.

```
5210  \cs_new_protected:Nn \__enumext_safe_exec_viii:

5225        }
5226      \bool_set_true:N \l__enumext_starred_bool
5227      % Set false for interfering with enumext nested in keyans* (yes, its possible and crayze)
5228      \bool_set_false:N \l__enumext_store_active_bool
5229      \int_compare:nNnT { \l__enumext_level_int } > { 1 }
5230        {
5231          \msg_error:nn { enumext } { keyans-wrong-level }
5232        }
5233    }
```

(*End of definition for* __enumext_safe_exec_viii:.)

__enumext_parse_keys_viii:n Parse [⟨*key* = *val*⟩] for keyans*.

```
5234  \cs_new_protected:Npn \__enumext_parse_keys_viii:n #1
5235    {
5236      \tl_if_novalue:nF {#1}
5237        {
5238          \keys_set:nn { enumext / keyans* } {#1}
5239        }
5240    }
```

(*End of definition for* __enumext_parse_keys_viii:n.)

__enumext_before_list_viii: The function __enumext_before_list_viii: will add the vertical spacing on the environment if the above key is active next to the {⟨*code*⟩} defined by the before* key if it is active, the call the function __enumext_start_mini_viii: handle by mini-env.

```
5241  \cs_new_protected:Nn \__enumext_before_list_viii:
5242    {
5243      \__enumext_vspace_above_viii:
5244      \__enumext_before_args_exec_viii:
5245      \__enumext_start_mini_viii:
5246    }
```

(*End of definition for* __enumext_before_list_viii:.)

`\__enumext_after_list_viii:`

The function `\__enumext_after_list_viii:` first call the function `\__enumext_stop_mini_viii:`, then apply the {⟨*code*⟩} handled by the `after` key together with the *vertical space* handled by the `below` key if they are present.

```
5247 \cs_new_protected:Nn \__enumext_after_list_viii:
5248   {
5249     \__enumext_stop_mini_viii:
5250     \__enumext_after_stop_list_viii:
5251     \__enumext_vspace_below_viii:
5252   }
```

(*End of definition for* `\__enumext_after_list_viii:`.)

13.48.1   The command `\item` in keyans*

The idea here is to make the `\item` command behave in the same way as in the `keyans` environment with the difference of the *optional argument* (⟨*number*⟩) which works in the same way as in the `enumext*` environment. In simple terms we want to store the ⟨*label*⟩ next to the [⟨*content*⟩] if it is present in the *sequence* and *prop list* defined by `save-ans` key for `\item*`, `\item*`[⟨*content*⟩], `\item(`⟨*number*⟩`)*` and `\item(`⟨*number*⟩`)*`[⟨*content*⟩] commands.

`\__enumext_first_item_tmp_viii:`

The `\__enumext_first_item_tmp_viii:` function will remove horizontal space equal to `\labelwidth` plus `\labelsep` to the left of the *"first"* `\item` in the environment at the point of execution of this function, where it is equal to the `\__enumext_stop_item_tmp_viii:` function inside the environment body definition.

```
5253 \cs_new_protected_nopar:Nn \__enumext_first_item_tmp_viii:
5254   {
5255     \skip_horizontal:n
5256       {
5257         -\l__enumext_labelwidth_viii_dim - \l__enumext_labelsep_viii_dim
5258       }
5259     \ignorespaces
5260   }
```

(*End of definition for* `\__enumext_first_item_tmp_viii:`.)

`\__enumext_start_item_tmp_viii:`
`\__enumext_item_peek_args_viii:`
`\__enumext_joined_item_viii:w`
`\__enumext_standar_item_viii:w`

First we will call the function `\__enumext_stop_item_tmp_viii:` that we will redefine later, we will increment the value of `\l__enumext_item_column_pos_viii_int` that will count the item's by rows and the value of `\g__enumext_item_count_all_viii_int` that will count the total of item's in the environment. After that we will call the function `\__enumext_item_peek_args_viii:` that will handle the arguments passed to `\item`.

```
5261 \cs_new_protected_nopar:Nn \__enumext_start_item_tmp_viii:
5262   {
5263     \__enumext_stop_item_tmp_viii:
5264     \int_incr:N \l__enumext_item_column_pos_viii_int
5265     \int_gincr:N \g__enumext_item_count_all_viii_int
5266     \__enumext_item_peek_args_viii:
5267   }
```

The function `\__enumext_item_peek_args_viii:` will handle the `\item(`⟨*number*⟩`)`. Look for the argument "`(`", if it is present we will call the function `\__enumext_joined_item_viii:w` (⟨*number*⟩), which is in charge of joining the item's in the same row, in case they are not present we will set the default value (`1`).

```
5268 \cs_new_protected:Nn \__enumext_item_peek_args_viii:
5269   {
5270     \peek_meaning:NTF (
5271       { \__enumext_joined_item_viii:w }
5272       { \__enumext_joined_item_viii:w (1) }
5273   }
```

The function `\__enumext_joined_item_viii:w` will first call the function `\__enumext_starred_-joined_item_viii:n` in charge of setting the *width* of the box that will store the content passed to `\item`. Then we will look for the argument "`*`", if it is present we will call the function `\__enumext_starred_-item_viii:w` otherwise we will call the function `\__enumext_standar_item_viii:w`.

```
5274 \cs_new_protected:Npn \__enumext_joined_item_viii:w (#1)
5275   {
5276     \__enumext_starred_joined_item_viii:n {#1}
5277     \peek_meaning_remove:NTF *
5278       { \__enumext_starred_item_viii:w }
5279       { \__enumext_standar_item_viii:w }
5280   }
```

The function `\__enumext_standar_item_viii:w` will first look for the argument "`[`", if present it will set the state of the variable `\l__enumext_wrap_label_opt_viii_bool` equal to the state of the variable `\l__enumext_wrap_label_opt_viii_bool` handled by the key `wrap-label*` and finally execute the *non-enumerated* version `\item[`⟨*custom*⟩`]` by means of the function `\__enumext_start_item_viii:w`, otherwise we will set the value of the variable `\l__enumext_wrap_label_viii_bool` handled by the `wrap-label` key to true and set the switch `\if@noitemarg` to true to execute the enumerated version of `\item` by means of the function `\__enumext_start_item_viii:w [ \l__enumext_label_viii_tl ]`.

```
5281 \cs_new_protected:Npn \__enumext_standar_item_viii:w
5282   {
5283     \bool_set_false:N \l__enumext_item_starred_viii_bool

5460      }
```

(*End of definition for* __enumext_remove_extra_parsep_viii:*.*)

13.49 The command \getkeyans

\getkeyans
__enumext_getkeyans_aux:n
__enumext_getkeyans:nn

The \getkeyans command takes a *mandatory argument* of the form {⟨*store name : position*⟩}. Retrieve a *"single content"* stored by \anskey, \anspic* and \item* and anskey* from *prop list* defined by save-ans key.

```
5461 \NewDocumentCommand \getkeyans { m }
5462   {
5463     \exp_args:Ne \__enumext_getkeyans_aux:n
5464       { \tl_to_str:e { \text_expand:n {#1} } }
5465   }
```

The internal function __enumext_getkeyans_aux:n is in charge of *splitting* the *mandatory argument* using ":". If ":" is omitted it will return an error.

```
5466 \cs_new_protected:Npn \__enumext_getkeyans_aux:n #1
5467   {
5468     \str_if_in:nnTF {#1} { : }
5469       {
5470         \use:e
5471           {
5472             \cs_set:Npn \exp_not:N \__enumext_tmp:w ##1 \c_colon_str ##2 \scan_stop:
5473               { {##1} {##2} }
5474           }
5475         \exp_after:wN \__enumext_getkeyans:nn \__enumext_tmp:w #1 \scan_stop:
5476       }
5477     { \msg_error:nnn { enumext } { missing-colon } {#1} }
5478   }
```

The internal function __enumext_getkeyans:nn will check for the existence of the *prop list*, if it does not exist it will return an error message, then it will fetch the content specified by the *second argument* from *prop list*.

```
5479 \cs_new_protected:Npn \__enumext_getkeyans:nn #1 #2
5480   {
5481     \prop_if_exist:cTF { g__enumext_#1_prop }
5482       {
5483         \prop_item:cn { g__enumext_#1_prop }{#2}
5484       }
5485       {
5486         \msg_error:nnn { enumext } { undefined-storage-anskey } {#1}
5487       }
5488   }
```

(*End of definition for* \getkeyans *,* __enumext_getkeyans_aux:n *, and* __enumext_getkeyans:nn*. This function is documented on page 19.*)

13.50 The command \printkeyans

The \printkeyans command prints *"all stored content"* in the *sequence* defined by the save-ans key.
The first thing we will do is define a set of ⟨*filtered keys*⟩ with which we will control the options of the different nesting levels for the environment enumext and enumext* by storing their values in the list of tokens \l__enumext_print_keyans_X_tl.

The variable \l__enumext_print_keyans_starred_tl will have the default ⟨*keys*⟩ for \printkeyans* and will be set by \setenumext[⟨*print**⟩] and the variable \l__enumext_print_keyans_vii_tl will have the default keys for the environment enumext* nested within the *sequence* and will be set by \setenumext[⟨*print ,**⟩], the rest of the variables will be for the environment enumext and will be set by \setenumext[⟨*print , level*⟩].

```
5489 \keys_define:nn  { enumext / print }

5514                                    first=\small, font=\small },
5515         print-4 .code:n       = \keys_precompile:neN { enumext / level-4 }
5516                                      { \__enumext_filter_save_key:n {#1} }
5517                                    \l__enumext_print_keyans_iv_tl,
5518         print-4 .initial:n    = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5519                                    rightmargin=0pt, listparindent=0pt, nosep, label=\Alph*.,
5520                                    first=\small, font=\small },
5521         print-* .code:n       = \keys_precompile:neN { enumext / enumext* }
5522                                      { \__enumext_filter_save_key:n {#1} }
5523                                    \l__enumext_print_keyans_vii_tl, % starred nested
5524         print-* .initial:n    = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5525                                    rightmargin=0pt, listparindent=0pt, nosep, label=\arabic*.,
5526                                    first=\small, font=\small },
5527       }
```

💣 The reason for storing ⟨keys⟩ in token lists using \keys_precompile:neN is because the keys are set via \setenumext but are later executed by running the command \printkeyans and they are not handled directly by its *optional argument*, except those related to the *first* opening level.

\printkeyans
__enumext_printkeyans:nnn

Create a user command to print *"all stored content"* in *sequence* for \anskey, anskey*, \item* and \anspic*. Within a group we will run our *"precompiled keys"* and then call the internal function __enumext_printkeyans:nnn.

```
5528 \NewDocumentCommand \printkeyans { s O{} m }
5529   {
5530     \group_begin:
5531       \bool_set_true:N \l__enumext_print_keyans_cmd_bool
5532       \tl_use:N \l__enumext_print_keyans_i_tl
5533       \tl_use:N \l__enumext_print_keyans_ii_tl
5534       \tl_use:N \l__enumext_print_keyans_iii_tl
5535       \tl_use:N \l__enumext_print_keyans_iv_tl
5536       \tl_use:N \l__enumext_print_keyans_vii_tl
5537       \__enumext_printkeyans:nnn { #1 } { #2 } { #3 }
5538       \bool_set_false:N \l__enumext_print_keyans_cmd_bool
5539     \group_end:
5540   }
```

The internal function __enumext_printkeyans:nnn will check for the existence of the *sequence*, if it does not exist it will return an error message, then it will check if not empty.

```
5541 \cs_new_protected:Npn \__enumext_printkeyans:nnn #1 #2 #3
5542   {
5543     \seq_if_exist:cTF { g__enumext_#3_seq }
5544       {
5545         \seq_if_empty:cF { g__enumext_#3_seq }
5546           {
```

If the *starred argument* '*' is present we will check that the environment enumext* is not saved in the *sequence*, then execute the variable \l__enumext_print_keyans_starred_tl that contains the default ⟨keys⟩ for the environment enumext*, we set \l__enumext_base_line_fix_bool and \l__enumext_print_keyans_-star_bool to true for *baseline correction*, open the enumext* environment passing the *optional argument* and map the *sequence*, then set \l__enumext_base_line_fix_bool and \l__enumext_print_keyans_-star_bool to false.

```
5547             \bool_if:nTF {#1}
5548               {
5549                 \seq_if_in:cnTF { g__enumext_#3_seq } { \end{enumext*} }
5550                   {
5551                     \msg_error:nnnn { enumext } { print-starred } {#3} { enumext* }
5552                   }
5553                   {
```

```
5554                        \tl_use:N \l__enumext_print_keyans_starred_tl
5555                        \bool_set_true:N \l__enumext_base_line_fix_bool
5556                        \bool_set_true:N \l__enumext_print_keyans_star_bool
5557                        \begin{enumext*}[#2]
5558                          \seq_map_inline:cn { g__enumext_#3_seq } { ##1 }
5559                        \end{enumext*}
5560                        \bool_set_false:N \l__enumext_base_line_fix_bool
5561                        \bool_set_false:N \l__enumext_print_keyans_star_bool
5562                      }
5563                  }
```

Otherwise it will open the environment enumext passing the *optional argument* to the *"first level"* then map the *sequence*.

```
5564                  {
5565                    \begin{enumext}[#2]
5566                      \seq_map_inline:cn { g__enumext_#3_seq } { ##1 }
5567                    \end{enumext}
5568                  }
5569              }
5570          }
5571          {
5572            \msg_error:nnn { enumext } { undefined-storage-anskey } {#3}
5573          }
5574      }
```

(*End of definition for* \printkeyans *and* __enumext_printkeyans:nnn. *This function is documented on page 20.*)

13.51 The command \setenumext

The command \setenumext will be in charge of managing the ⟨*keys*⟩ passed to all environments and to the \printkeyans command. We must take precautions with the enumext* and enumext environments so as not to capture ⟨*keys*⟩ that complicate us.

__enumext_filter_level:n
__enumext_filter_level_key:n
__enumext_filter_level_pair:nn

The function __enumext_filter_level:n will be in charge of filtering the ⟨*keys*⟩ passed to the enumext and enumext* environments.

```
5575 \cs_new:Npn \__enumext_filter_level:n #1
5576    {
5577      \use:e
5578        {
5579          \keyval_parse:NNn
5580            \__enumext_filter_level_key:n
5581            \__enumext_filter_level_pair:nn {#1}
5582        }
5583    }
```

The function __enumext_filter_level_key:n will be responsible for filtering the ⟨*keys*⟩ that are passed *"without value"* by excluding the keys resume*, reset and reset* passed to the enumext and enumext* environments.

```
5584 \cs_new:Npn \__enumext_filter_level_key:n #1
5585    {
5586      \str_case:nnF {#1}
5587        {
5588          { resume* } {} { reset } {} { reset* } {}
5589        }
5590        { , { \exp_not:n {#1} } }
5591    }
```

The function __enumext_filter_level_pair:nn will be responsible for filtering the ⟨*keys*⟩ that are passed *"with value"* by excluding the series, resume and save-ans keys passed to the enumext and enumext* environments.

```
5592 \cs_new:Npn \__enumext_filter_level_pair:nn #1#2
5593    {
5594      \str_case:nnF {#1}
5595        {
5596          { series } {}  { save-ans } {} { resume } {}
5597        }
5598        { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
5599    }
```

(*End of definition for* __enumext_filter_level:n, __enumext_filter_level_key:n, *and* __enumext_filter_level_-pair:nn.)

Now define a *"meta families"* of ⟨*keys*⟩ to access from \setenumext.

```
5600  \keys_define:nn { enumext / meta-families }
5601    {
5602      enumext-1 .code:n = {
5603                          \keys_set:ne { enumext / level-1 }
5604                            {
5605                              \__enumext_filter_level:n {#1}
5606                            }
5607                          },
5608      enumext-2 .code:n = {
5609                          \keys_set:ne { enumext / level-2 }
5610                            {
5611                              \__enumext_filter_level:n {#1}
5612                            }
5613                          },
5614      enumext-3 .code:n = {
5615                          \keys_set:ne { enumext / level-3 }
5616                            {
5617                              \__enumext_filter_level:n {#1}
5618                            }
5619                          },
5620      enumext-4 .code:n = {
5621                          \keys_set:ne { enumext / level-4 }
5622                            {
5623                              \__enumext_filter_level:n {#1}
5624                            }
5625                          },
5626      enumext*  .code:n = {
5627                          \keys_set:ne { enumext / enumext* }
5628                            {
5629                              \__enumext_filter_level:n {#1}
5630                            }
5631                          },
5632      keyans    .code:n = { \keys_set:nn { enumext / keyans  } {#1} },
5633      keyans*   .code:n = { \keys_set:nn { enumext / keyans* } {#1} },
5634      print*    .code:n = { \keys_set:nn { enumext / print   } { print*  = {#1} } },
5635      print-1   .code:n = { \keys_set:nn { enumext / print   } { print-1 = {#1} } },
5636      print-2   .code:n = { \keys_set:nn { enumext / print   } { print-2 = {#1} } },
5637      print-3   .code:n = { \keys_set:nn { enumext / print   } { print-3 = {#1} } },
5638      print-4   .code:n = { \keys_set:nn { enumext / print   } { print-4 = {#1} } },
5639      print-*   .code:n = { \keys_set:nn { enumext / print   } { print-* = {#1} } },
5640      unknown   .code:n = { \msg_error:nn { enumext } { unknown-key-family } },
5641    }
```

We store them in the constant sequence `\c__enumext_all_families_seq` separated by commas.

```
5642  \seq_const_from_clist:Nn \c__enumext_all_families_seq
5643    {
5644      enumext-1, enumext-2, enumext-3, enumext-4, keyans, enumext*,
5645      keyans*, print-1, print-2, print-3, print-4, print-*, print*,
5646    }
```

\setenumext   Now we define the user command \setenumext.

__enumext_set_parse:n
__enumext_set_error:nn
```
5647  \NewDocumentCommand \setenumext { O{enumext,1} +m }
5648    {
5649      \seq_clear:N \l__enumext_setkey_tmpa_seq
5650      \seq_set_from_clist:Nn \l__enumext_setkey_tmpb_seq {#1}
5651      \int_set:Nn \l__enumext_setkey_tmpa_int
5652        {
5653          \seq_count:N \l__enumext_setkey_tmpb_seq
5654        }
5655      \int_compare:nNnTF { \l__enumext_setkey_tmpa_int } > { 1 }
5656        {
5657          \seq_pop_left:NN \l__enumext_setkey_tmpb_seq \l__enumext_setkey_tmpa_tl
5658          \seq_map_function:NN \l__enumext_setkey_tmpb_seq \__enumext_set_parse:n
5659          \seq_set_map_e:NNn \l__enumext_setkey_tmpa_seq \l__enumext_setkey_tmpa_seq
5660            {
5661              \tl_use:N \l__enumext_setkey_tmpa_tl - ##1
5662            }
5663        }
5664        {
5665          \seq_put_right:Ne \l__enumext_setkey_tmpa_seq { \tl_trim_spaces:n {#1} }
5666        }
```

```
5667      \seq_if_empty:NTF \l__enumext_setkey_tmpa_seq
5668        { \seq_map_inline:Nn \c__enumext_all_families_seq }
5669        { \seq_map_inline:Nn \l__enumext_setkey_tmpa_seq }
5670        {
5671          \keys_set:nn { enumext / meta-families } { ##1 = {#2} }
5672        }
5673      }
```

Internal functions used by the \setenumext command.

```
5674  \cs_new_protected:Npn \__enumext_set_parse:n #1
5675      {
5676      \tl_set:Ne \l__enumext_setkey_tmpb_tl { \tl_trim_spaces:n {#1} }
5677      \clist_map_inline:nn { 0, 1, 2, 3, 4, * } % <- max level
5678        { \tl_remove_all:Nn \l__enumext_setkey_tmpb_tl {##1} }
5679      \tl_if_empty:NTF \l__enumext_setkey_tmpb_tl
5680        {
5681          \seq_put_right:Ne \l__enumext_setkey_tmpa_seq
5682            { \tl_trim_spaces:n {#1} }
5683        }
5684        { \__enumext_set_error:nn {#1} { } }
5685      }
5686  \cs_new_protected:Npn \__enumext_set_error:nn #1 #2
5687      { \msg_error:nnnn { enumext } { invalid-key } {#1} {#2} }
```

(*End of definition for* \setenumext, __enumext_set_parse:n, *and* __enumext_set_error:nn. *This function is documented on page 6.*)

13.52   The command \setenumextmeta

The command \setenumextmeta will be responsible for adding new *"meta-keys"* for the enumext and enumext* environments. The implementation code was given by Jonathan P. Spratte (@Skillmon) answer in Simplify syntax for command that adds .meta key to existing keys (l3keys).

\setenumextmeta
__enumext_key_set_meta:nnn
__enumext_key_def_meta:nnn
__enumext_key_def_meta:Vnn

First we will create a ⟨*keys*⟩ of type .code:n for *"all levels"* of the enumext environment.

```
5688  \int_step_inline:nn { 4 }
5689      {
5690      \keys_define:nn { enumext }
5691        {
5692          #1 .code:n = \str_set:Nn \l__enumext_meta_path_str { level-#1 }
5693          ,#1 .value_forbidden:n = true
5694        }
5695      }
```

And now we define the ⟨*keys*⟩ for the environments using .code:n for the enumext environment and .meta:n for the enumext* environment.

```
5696  \clist_map_inline:nn { enumext }
5697      {
5698      \keys_define:nn { enumext }
5699        {
5700          #1   .code:n = % ignored for now, might do something useful in the future
5701          ,#1   .value_forbidden:n = true
5702          ,#1* .code:n = \str_set:Nn \l__enumext_meta_path_str { #1* }
5703          ,#1* .value_forbidden:n = true
5704        }
5705      }
5706  \keys_define:nn { enumext }
5707      {
5708      * .meta:n = enumext*
5709      ,* .value_forbidden:n = true
5710      }
```

Now we create the user command taking care that unknown cannot be passed as an argument.

```
5711  \NewDocumentCommand \setenumextmeta { s O{enumext,1} m +m }
5712      {
5713      \str_if_eq:eeTF { \tl_trim_spaces:n {#3} } { unknown }
5714        { \msg_error:nn { enumext } { prohibited-unknown } }
5715        {
5716          \bool_if:nTF {#1}
5717            {
5718              \int_step_inline:nn { 4 }
5719                { \__enumext_key_set_meta:nnn { enumext, ##1 } {#3} {#4} }
5720              \__enumext_key_set_meta:nnn { enumext* } {#3} {#4}
5721            }
```

```
5722              { \__enumext_key_set_meta:nnn {#2} {#3} {#4} }
5723          }
5724      }
```

The internal functions `\__enumext_key_set_meta:nnn` and `\__enumext_key_def_meta:nnn` will check the *optional argument* and create the *"meta-key"*.

```
5725  \cs_new_protected:Npn \__enumext_key_set_meta:nnn #1
5726    {
5727      \keys_set:nn { enumext } {#1}
5728      \__enumext_key_def_meta:Vnn \l__enumext_meta_path_str
5729    }
5730  \cs_new_protected:Npn \__enumext_key_def_meta:nnn #1#2#3
5731    {
5732      \bool_lazy_or:nnTF
5733        { \keys_if_exist_p:nn { enumext / #1} {#2} }
5734        { \keys_if_exist_p:nn { enumext / enumext* } {#2} }
5735        { \msg_error:nnn { enumext } { already-defined } {#2} }
5736        {
5737          \keys_define:nn { enumext / #1 }

13.53 The command `\foreachkeyans`

The command `\foreachkeyans` will execute a *loop* over the *prop list* and return its contents. The implementation code is adapted from the answer provided by Enrico Gregorio (@egreg) in Expand a `.cs` defined by key inside the function.

`\foreachkeyans`
`\__enumext_parse_foreach_keys:nn`
`\__enumext_parse_foreach_keys:n`
`\__enumext_foreach_keyans:nn`
`\__enumext_foreach_add_body:n`

We define a set of ⟨*keys*⟩ for command and we will save the default values of these in `\g__enumext_-foreach_default_keys_tl` to avoid the use of group.

```
5745  \keys_define:nn { enumext / foreach }
5746    {
5747      before  .tl_set:N  = \l__enumext_foreach_before_tl,
5748      before  .value_required:n = true,
5749      after   .tl_set:N  = \l__enumext_foreach_after_tl,
5750      after   .value_required:n = true,
5751      start   .int_set:N = \l__enumext_foreach_start_int,
5752      start   .value_required:n = true,
5753      stop    .int_set:N = \l__enumext_foreach_stop_int,
5754      stop    .value_required:n = true,
5755      step    .int_set:N = \l__enumext_foreach_step_int,
5756      step    .value_required:n = true,
5757      wrapper .cs_set_protected:Np = \__enumext_foreach_wrapper:n #1,
5758      wrapper .value_required:n = true,
5759      sep     .tl_set:N  = \l__enumext_foreach_sep_tl,
5760      sep     .value_required:n = true,
5761      unknown .code:n    = { \__enumext_parse_foreach_keys:n {#1} }
5762    }
5763  \keys_precompile:nnN { enumext / foreach }
5764    {
5765      before={},after={},start=1,step=1,stop=0,wrapper=#1,sep={; }
5766    }
5767    \l__enumext_foreach_default_keys_tl
```

Functions for handling unknown ⟨*keys*⟩.

```
5768  \cs_new_protected:Npn \__enumext_parse_foreach_keys:nn #1#2
5769    {
5770      \tl_if_blank:nTF {#2}
5771        {
5772          \msg_error:nnn { enumext } { for-key-unknown } {#1}
5773        }
5774        {
5775          \msg_error:nnnn { enumext } { for-key-value-unknown } {#1} {#2}
5776        }
5777    }
```

```
5778  \cs_new_protected:Npn \__enumext_parse_foreach_keys:n #1
5779    {
5780      \exp_args:NV \__enumext_parse_foreach_keys:nn \l_keys_key_str {#1}
5781    }
```

We create the command.

```
5782  \NewDocumentCommand \foreachkeyans { +O{} m }
5783    {
5784      \__enumext_foreach_keyans:nn {#1} {#2}
5785    }
```

Finally the internal functions __enumext_foreach_keyans:nn and __enumext_foreach_add_body:n will loop through the prop list and print the contents.

```
